

Royal Gazette, and Miscellany of the Island of Saint John.

CHARLOTTE TOWN: PRINTED BY WILLIAM A. RIND, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY.

In another Country an ALMANACK is generally an Article of great Emolument to the Printer, and reputed Advantage to the Public—in this, it has not hitherto met with such Encouragement from the Community as to make it an Object worthy of Publication in the usual Way. This being the Case, the Printer conceived, that he could not render his Paper more useful to his Subscribers, and interesting to the Public, than by inserting the Calendar for the present Year, which will be published in such Proportions as to comprise the whole in a few Numbers.

ALMANACK

FOR THE YEAR OF

OUR LORD CHRIST, 1792;

BEING

BISSEXTILE, OR LEAP YEAR.

WHEREIN ARE CONTAINED,

The Lunations, Eclipses, Rising and Setting of the Sun, the Conjunctions and Oppositions of the Sun and Moon, the Time of High Water in the Morning every Day, Rising and Setting of the Moon, &c.

Calculated for the Meridian of Charlotte-Town, in the Island of Saint John, in the Gulph of the River Saint Lawrence—

being nearly 46 d. 15 m. North Latitude, and Longitude 62 d. 50 m. West from London.

BY JOSEPHUS SCALIGER, PHILOM.

- First Day of Lent, February 22.
- Rogation Sunday, May 13.
- Ascension Day, May 17.
- Whitsunday, May 27.
- Advent Sunday, December 2.

ECLIPSES.

There will be two Eclipses of the Sun in 1792.

First, March 22d, at 1 h. 44 m. P. M. is the Time of new Moon; the Sun being nearly in 40 m. of the first Deg. of the Sign Aries, the Ram, and will pass the Moon's South descending Node on the 25th Day of March, at 5 h. 48 m. P. M. nearly. He will be visibly eclipsed; and vertical near to Cape Saint Francisco, in South America, Long. 88 W. and Lat. 1 d. 14 m. North, in Terra Firma.

Second, September 16th Day, at 4 h. 54 m. in the Morning, is the Time of New Moon; the Sun being in the 25th Degree of the Sign Virgo, the Virgin; and has passed the North Ascending Node of the Moon, on the 14th Day of September, he will be eclipsed. In both these Eclipses, as the Sun, at the Time of Conjunctions with the Moon, is so near to the Line of the Moon's Nodes, they will be pretty large; but the greatest Appearance of the first will be Westward, and the last Eastward—As the Sun will be vertical near Magadoxo Town, in Africa, Longitude 44 E. and Lat. 2 d. 30 m. North, it will be invisible to us.

The glorious Planet Venus will be Morning Star until the 29th Day of July, then Evening Star to the End of the Year. When Venus appears West from the Sun, she rises before him in the Morning, and then is called the Morning Star, when East she Shines after the Sun sets, then Evening Star: being each in its Turn for 290 Days.

I. JANUARY hath 31 Days.

- Full Moon, 9th, 5 h. 49 m. Morn.
- Last Quarter, 17th, 10 h. 17 m. Morn.
- New Moon, 23d, 1h. 16m. Aftern.
- First Quarter, 30th, 6h. 50m. Aftern.
