

Agricultural News

F. E. I. Department of Agriculture

CENTENNIAL FARM WEEK
Agriculturalists of the Canada Department of Agriculture and P. E. I. Department of Agriculture are putting on the Centennial Farm Week on July 5th, 6th, and 7th, at the Experimental Farm, and that people will have an opportunity to see some of the more recent advances and improvements in Agriculture.

The co-ordinating committee is under the joint chairmanship of Mr. R. C. Parent, Superintendent of the Experimental Station; and Mr. S. C. Wright, Deputy Minister of Agriculture. Various other committees have been set up under the following chairmen: Youth Day — Mr. Robert Pierce; Exhibits — Mr. Ewen Campbell; Publicity — Doctor George C. Fisher; Horticulture — Mr. W. E. Smith; Field Crops — Mr. L. C. Tulpin; Livestock — Mr. S. C. Wright; Poultry — under the supervision of the P. E. I. Poultry Industries Committee; and the Chicken Bar-B-Q under the joint supervision of Doctor George C. Fisher and Mr. S. C. Scranton.

YOUTH DAY
The first day of the Centennial Farm Week will feature 4-H Clubs and Junior Farmers. Special programmes for these groups will be announced at a later date. The other features, such as horticulture, field crops, livestock and poultry, will be announced later.

The exhibits will be varied and will cover the various phases in agriculture. These exhibits will be very interesting and informative.

Chicken Bar-B-Q
The third annual Chicken Bar-B-Q, sponsored by the Prince Edward Island Poultry Industries Committee, will be held at the close of the Centennial Farm Week on Thursday, July 7th. This will be your opportunity to bring your family and friends and enjoy Prince Edward Island chicken at its best.

DRAINAGE
Improving tillable land does not necessarily result in an increase in the total volume of farm products, but it does mean a substantial reduction in unit costs and the net return to the farmer.

One way in which both increases in volume and net returns may be brought about in many areas of the Island would be the installation of an adequate drainage system. This system might be of one or both of two commonly known types of drainage. The first might be of the open ditch type which at the present is the most commonly used in this province. Needless to say there is considerable work entailed in keeping these ditches cleaned out and running freely.

Problems of drainage are not new. In recent years much research has been done on the design of open ditches and it has been found that the grassed waterway is the most economical from the standpoint of construction and maintenance. The essential difference between the common open ditch and the grassed waterway is the slope of the sides of the ditch. The common open ditch has vertical to nearly vertical sides whereas the grassed waterway has a horizontal slope. Almost all the waterways are constructed by permanent sod cover and the maintenance then reduces itself to mowing twice a year. Culverts and bridges are done away with because a well constructed grassed waterway may be crossed anywhere in its length with practically any type of farm machinery.

The other type of drainage which in most cases yields the greatest net returns on any farm is any community is tile drainage. Successful under-drainage improves the performance of service in an inconspicuous manner being largely buried out of sight and functioning noiselessly. It is thus that they attract little attention so that it is difficult for anyone other than the land owner to see the benefits being derived from it.

Few indeed are the farms in this province where some tile drainage would not be of decided benefit. This type of drainage in a field means earlier access to that field in the spring, thus lengthening out the growing season which for many of our crops is far too short at the best. More economical tillage of the soil is brought about by the increased aeration and improved texture of the soil due to the effects of the tile drainage.

The drainage is broken down into two types — Selective and Systematic. Selective drainage is basically tapping of one or two low spots in a field while Systematic drainage entails continuous lines of the ditches spaced over the entire field. This latter type is used when the entire area is wet and heavy.

The prime essential in any type of drainage is an adequate outlet of the system. In other words there is a brook, ditch or uncultivated hollow deep enough to vent the drain for passage of the water from the drainage area?

TIPS ON SHEARING SHEEP
(1) Shear on a clean floor.
(2) Remove chaff, straw, manure, etc., from fleece before shearing.
(3) Keep sheep comfortable and elevated off floor, as proper positions are essential for shearing.
(4) Remove tags and place wool inside wrapped up.

songs, after which the meeting adjourned.

The monthly meeting of the Tignish Rural Calf Club was held at the home of Ray Handrahan on April 3rd, with 13 members present. The meeting was called to order by the President, and roll call was answered by the naming of a flower.

Following the reading of the minutes it was moved by Frances Ann Gallant and seconded by Lorraine Chlosoy that the minutes be approved as read.

Following the business portion of the meeting it was decided that a debate be held at the next regular meeting, the title being "Rescue that a Horse is More Useful to a Farmer Than a Tractor."

TIPS ON FEEDING SHEEP
(1) Start to feed grain to the pregnant ewe 6 weeks before the lambing period begins. Feed them a grain ration of two parts of crushed oats to one part of bran at the rate of 1/2 pound of the mixture per head per day. Gradually increase the daily grain ration to 1 1/2 pounds each by lambing time. If top legume hay is fed, the rate of grain feeding may be greatly reduced.

(2) Gradually discontinue the feeding of succulent (that is, roots or silage) to the bred ewe to the month before lambing.

TIPS ON MANAGEMENT
(1) Watch for crowding and jamming by ewes at doors, or gates, and at the feed troughs. When ewes are heavy in lamb injury from crowding can result in death to the unborn lamb.

(2) Watch for pregnancy disease in ewes. The symptoms are unthriftiness, sluggishness, unsteadiness of gait, and later paralysis. The ewe often makes a trotting motion when down on her side. Adequate exercise and a balanced ration will help to prevent the disease. Call a veterinarian if the disease appears.

(3) Prepare small individual pens for each ewe to lamb in. Select a dry, warm place which is free from draughts. Bed the pens with clean straw.

(4) Disinfect the navel of the new born lamb with iodine immediately after birth.

(5) Be sure the new born lamb nurses as soon as it is strong enough, usually within the first half hour.

(6) Mark each ewe and her lambs with a similar mark for easy identification of each, using a special marking fluid that will not damage the wool.

(7) Check the udder of the ewe periodically to be sure there is sufficient milk available for the lamb and watch the lambs to see that they are getting the milk. Watch for sore teats and apply a salve if necessary.

(8) Dock all lambs and castrate all males when approximately 2 weeks old. Disinfect open wounds with iodine.

(9) Keep unlambed ewes separate from those that have lambed.

(10) Pick up bag strings, wool tags, and other bits of refuse around the pens. This debris may cause wool balls in the stomach of the lambs if they are allowed to eat it.

(11) Worm all adult sheep 24 hours before they go on pasture to control internal parasites.

(12) It is wise to turn sheep out on a new pasture each spring as old pastures may be heavily infested with worm eggs, etc. Rotate pastures so that sheep only graze them every second year or more.

(13) Rotate pastures. Sheep have a strong preference for a short, young pasture. Every two or three weeks move the sheep to new pasture. This will help to control weeds, and will tend to reduce internal parasites.

(14) Spray or dip all sheep soon after shearing for control of external parasites.

(15) Plant Rape. If good quality aftermath will not be available for pasture during late August and September some succulent crop such as rape or kale should be planted in early July. If preferred, plant rape and grain together. After the grain crop is harvested the rape will be ready for finishing or fattening market lambs. It can also serve as a flushing feed for breeding ewes.

City and Central

COOK'S for perfect pictures.

LITTLE THEATRE presents "Angel Street" at Queen Charlotte High School, Thursday, April 14th, at eight o'clock. Admission by membership card only.

BROADCAST: Thursday, April 14th, at 8.45 p. m. Historic Highlights. George A. Leard, Souris, "One Hundred Years" Activity Round Souris Harbour.

ENGAGEMENT. — Mr. and Mrs. James B. Jay, Morell, announce the engagement of their daughter Mildred Collette to John Perozick, son of Mr. and Mrs. John Perozick, Toronto. Marriage to take place in St. Anthony's Church, Toronto, on Saturday, May 7th, 1955.

HAMPTON UNITED W. M. S.
The regular meeting of the W. M. S. was held at the Mansie on Tuesday, April 5th, at 8.30. The president occupied the chair and the music was capably directed by Mrs. Albert Best.

The Easter worship service was conducted by Mrs. Clayton Morrison. Service opened with the hymn "Rejoice, the Lord is King." Those assisting Mrs. Morrison were Mrs. Mae Dixon, Mrs. Albert Best and Mrs. Rowan Ferguson. Readings were also given by Mrs. Windsor Bell and Mrs. L. Ferguson. Service closed with hymn 250 and prayer by Mrs. William MacFarlane.

Minutes of last meeting were read by the Secretary, approved and signed. Roll call was answered by 12 members. Treasurer's report was given by Mrs. Elmer Inman. Temperance readings were given by Mrs. Rowan Ferguson and Mrs. Mack Dixon. Community Friendship Secretary reported nine hospital calls, four home calls, 16 cards and two treats. A book was also sent to Mrs. Clifton Ince who has been a patient in Hospital.

Easter Thank Offering was received at this meeting. The meeting closed with the Lord's Prayer and Mizpah Benediction. Lunch was served and a social half hour enjoyed; next meeting to be held at the home of Mrs. Dixon; word for roll call "Share"; lunch committee to be Mrs. Geo. Willett, Mrs. Elmer Inman and Mrs. Windsor Bell.
