

Sales Are Reported Booming For Metal-Stubbed Tires

TORONTO (CP)—Although a lot of government officials are worried about what metal tire studs might do to roads, sales of the tiny picks for winter driving are booming, manufacturers say.

Three years ago, says the Seco Studs division of Fager Steel Ltd., Canadian sales were 750,000. This year, forecasts general manager John Merriman, they will hit 30,000,000.

This would mean almost one car in 20 would be equipped with the studs, designed to increase traction in winter driving, especially on ice. That would not include vehicles changing to stud-equipped tires purchased last winter and still serviceable.

These figures, however, aren't accepted without some questions. The Ontario department of highways, for example, carried out an informal survey last winter in Toronto, London, Sudbury, Ottawa and Fort William.

Of 6,800 cars checked, officials found about 50 per cent were equipped with regular snow tires but only 40, or 68 per cent, had studs inserted in the treads.

DIDN'T TAKE ACTION

On the basis of this check, officials decided to take no immediate action about possible damage which studs could do when driven on cleared highways.

The studs have or soon will get official approval in British Columbia, Saskatchewan, Manitoba, Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland.

Neither Quebec nor Alberta has legislation either for or against, but an Alberta government spokesman says the situation is being watched.

Some studies made in the United States showed the studs

U.S. Puts Full Attention On Man-To-Moon Program

CAPE KENNEDY, Fla. (AP)—Project Gemini is history. Now the United States turns full attention to its greatest space adventure of all—the Apollo man-to-the-moon program.

In January or February, if present mechanical problems are solved, the first three-man Apollo crew is to rocket into earth orbit, starting a long series of flights aimed at a manned lunar landing in 1968 or 1969.

The two-man Gemini was a major step toward the moon, spanning the gap between the pioneering one-man Mercury program and Apollo. In 20 months it sent 20 men into space, qualifying them for Apollo tricks and teaching them the techniques required for lunar voyages.

However, Apollo has its troubles two months ago. National Aeronautics and Space Administration officials—optimistically conducting the first manned Apollo earth orbit flight this month.

It slipped to December and

now is scheduled for Jan. 17. But many officials expect a further delay until February.

The problems lie in the spacecraft, a roomy vehicle that will accommodate three men and even provide them with beds.

En route to the moon, the Apollo will weigh 34,000 pounds, compared with the 8,000-pound Gemini.

SAY CAN BE DONE

Minor troubles, plus a major one with the Saturn V man-to-moon rocket, have dimmed the possibility of a 1968 lunar landing. But some NASA officials believe it can be done then, nearly two years earlier than the 1970 goal set by the late president John F. Kennedy.

The first unmanned test flight of the huge rocket has been delayed from January until March or April. This belated, with 7,500,000 pounds of booster thrust, generates the power of 6,000 Boeing 707 jet planes.

The smaller Saturn I, with one-fifth the power of Saturn V,

Opening lead—five of clubs. Sylvia always did have a lot of trouble counting to thirteen. This characteristic of hers was not too surprising to the members of the club, since nearly all of Sylvia's thinking at the bridge table was marked by peculiarities and aberrations of the most unexpected kind.

Sylvia was utterly incapable of coping with the many problems of the game with what might be called orderly thinking. Probably all her thought processes, regardless of how fantastic they may have appeared to others, seemed to her to be entirely logical, and she was never able to convince her

will be the booster for the initial lunar landing flight. After a three-day flight, two of the crew will drop to the surface while the third remains in lunar orbit.

Here is the present timetable to the moon:

January or February, 1967: Earth orbit flight of up to 14 days to check spacecraft systems. Pilots will be Lt. Col. Virgil I. Grissom and Edward H. White II of the air force and Lt. Cmdr. Roger B. Chaffee of the navy.

March or April, 1967: First test of Saturn V, unmanned.

Mid-1967: Second earth orbital flight, also up to 14 days. Pilots will be navy Capt. Walter M. Schirra Jr., civilian Walter Cunningham and air force Man Don F. Eisele.

Mid-1967: Second unmanned flight test of Saturn V.

September or October, 1967: First rendezvous flight, with a three-man Apollo ship linking up with a lunar landing craft such as that in which two men eventually will ride to the surface of the moon.

Late 1967 or early 1968: First manned orbital flight using the Saturn V.

First half of 1968: Manned

COW PROVIDES GOLF HAZARD

EDMONTON (CP)—Several golfers ran into an unusual hazard at the River-side course here. Or rather the hazard nearly ran into them.

The unsuspected obstacle was a scared cow, from a truck, swam the North Saskatchewan River and bore down on the startled golfers. They promptly took refuge in nearby trees, several feet over par, while police and bystanders took up a three-hour chase that ended when the animal was subdued with a tranquilizer gun.

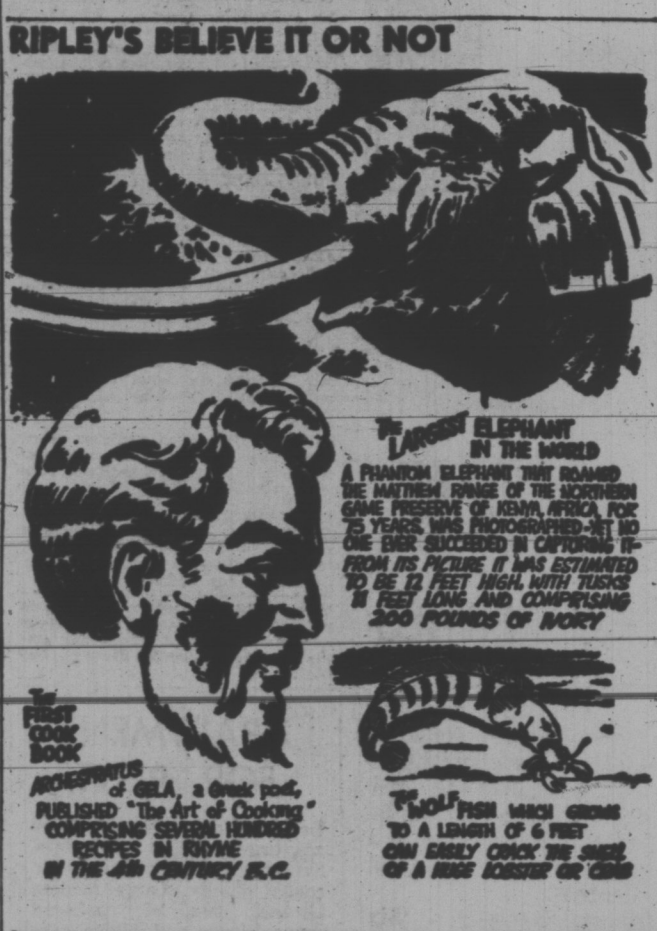

RIPLEY'S BELIEVE IT OR NOT

THE LARGEST ELEPHANT IN THE WORLD

A PHANTOM ELEPHANT WAS NAMED BY MATTHEW BUNGE OF THE HORNBY ISLANDS OF NEW ZEALAND FOR 20 YEARS WHO DISAPPEARED BUT WHO WAS SUCCESSFUL IN CAPTURING IT FROM HIS PICTURE. IT WAS ESTIMATED TO BE 12 FEET HIGH WITH TUSKS 18 FEET LONG AND CARRYING 300 POUNDS OF MEAT.

THEY'VE BEEN HERE

THEY'VE BEEN HERE TO A LENGTH OF 6 FEET AND ONLY CARRY THE SKIN OF A HIDE LONGER OR GREY.

DAILY CRYPTOQUOTE — Here's how to work it:

One letter simply stands for another. In this sample A is used for the three L's, X for the two O's, etc. Single letters, apostrophes, the length and formation of the words are all hints. Each day the code letters are different.
