

ABSOLUTE SECURITY.

Genuine
Carter's Little Liver Pills.

Must Bear Signature of

Warranted

See Fac-Simile Wrapper Below.

IMITATION IS THE SINCEREST FORM OF FLATTERY.

The best proof that
MINARD'S LINIMENT

has extraordinary merits, and is in good repute with the public, is that IT IS EXTENSIVELY IMITATED. The imitations resemble the genuine article in appearance only. They lack the general excellence of Genuine.

This notice is necessary, as injurious and dangerous imitations, called WHITE LINIMENT, &c., liable to produce chronic inflammation of the skin, are often substituted for MINARD'S LINIMENT by Dealers, because they pay a larger profit.

They all Sell on the Merits and Advertising of MINARD'S.

See in particular claiming to be made by a former proprietor of MINARD'S LINIMENT, which simply is a lie.

"RUSTICO" SPEAKS OUT.

Sir,—The reports from Ottawa bring the news that the Federal and Provincial Governments are in the boodling business together. One helps the other in the election on condition that the help be reciprocated when the need comes. Just as Pineau was "well received" by the Ottawa Government, so they expect that the people of Rustico will receive the bearers of the boodle in a similar manner on the eleventh. Because one Frenchman was found in this province who was base enough to play the part of a traitor to the friends of his lifetime on account of being "well received" by the Ottawa machine there is no reason to believe that the people of Rustico will consider themselves under any obligations to follow out the same course, and on account of the Federal Government wanting money for wharves in the West River district to support the candidate of a dying government that are taking every means, fair or foul, of robbing the political grave of the corpse that ought to have been buried last spring. The longer the burial is delayed the more do their misdeeds pollute the air. This is the second doctor that was called in, but the Government are past all hope of recovery. If I mistake not the independent sentiment of the people of Rustico they will resent this apparent purchase of votes, as the noble sons of another race in Belfast resented Sir Louis' threat about the railway. And they will also resent the sending into that district of an official who was given a fortnight's leave of absence previous to going to Ottawa, to canvass, while the people pay his salary.

The Dominion government had a notion of building cold storage apartments or bait freezers in Rustico, but the local government came to the conclusion that it will be cold enough for them on the 11th inst. and they will not likely be erected this year.

RUSTICO.

Eastern Notes.

The sad drowning that took place here at Campbell's Cove, on Tuesday last, has cast quite a gloom over the community. The young fellow, Bernard Campbell, who lost his life, was a fine, young man about 20 years of age, and the chief support of his widowed mother. Much sympathy is felt for the family. His body was picked up Friday.

The Lakeville cheese factory, notwithstanding the fact that a large number of the former patrons seceded and built a factory at Red Point, are yet doing better this season than ever before. There are some patrons supplying as much as 500 pounds of milk per day. Mr Larkin, the cheese-maker, is turning out a fine product.

Codfishing has been good for the last week. The Messrs Rose and Ryan, of Priest Pond have obtained a lot of fish. Mackerel have not yet shown up though some have been caught with nets.

A good man has gone to his reward in the person of Allan McDonald, Fishery Officer under the late government. We regret to say that Colin Campbell, E-q., is suffering from a severe attack of pneumonia and his recovery is sincerely to be hoped for.

There are very few changes taking place in the schools in these parts. The old teachers seem satisfied with their positions, while the districts are also apparently satisfied with the work of the teachers, with few exceptions. The people themselves must, however, be the judges of the efficiency of the schools in these parts, as, though there are now three inspectors for the Island, yet no inspection has been made at any of the schools in the eastern part of the Island for the past 12 months. It seems very strange that when there were but two inspectors our schools would be visited semi-annually or twice each year. Now with three inspectors our schools are not visited at all. This is scandalous. Why, if an old bridge is only to be repaired the government appoints an inspector, while in our schools, where thousands of dollars are expended there is no inspection. But how can an inspector McCormac perform his sworn duties when he is devoting most of his time to writing columns of stuff for the papers. One would imagine that it would be the duty of the new "Dr" of the Educational department to see that his inspectors are performing the duty they are paid for doing. Surely is Mr McCormac performing his duty by remaining idle at St Ganges and writing column after column of trashy, copied stuff for the Patriot and all the other papers that will publish his matter. We refer the negligence of the eastern inspector to the master of the Administration, Mr Piceau. Perhaps Mr Pineau will look after him.

AN EASTERN TEACHER.

MARRIED

At Dundas, on June 27th, by Rev. James R. McKay, Frank B. Harper, of Charlottetown, to Lilla McLure.

AN OLD AND WELL TRIED REMEDY.—Mrs. Winslow's Soothing Syrup has been used for over fifty years by millions of mothers for their children while teething with perfect success. It soothes the child, softens the gums, allays the pain, cures wind colic, and is the best remedy for diarrhoea. It is pleasant to the taste. Sold by druggists in every part of the world. Twenty-five cents a bottle. Its value is incalculable. Be sure and ask for Mrs. Winslow's Soothing Syrup.

When you say your blood is impure and your appetite poor you are admitting your need of Hood's Sarsaparilla. Begin taking it at once.

THE ENGINEERING MAGAZINE

Current events give a particular keenness of interest to Gen Barclay Parsons' illustrated article on the "Coming Engineering Development of the Far East," which leads the Engineering Magazine for July. His recent travels in, and intimate knowledge of, the country give force to his epigrammatic conclusion that the development in which is going to avail herself of European and American aid are "means of transportation, hydraulic machinery, mining, machines which can compete against a very low priced manual labor, and electric lighting. An editorial based on an interview with General Parsons supplements his article most interestingly and throws a strong light on the meaning of the present situation.

Three other papers in the Engineering Magazine, which are particularly timely are those by J Stephen Jeans, on "The Iron Situation from a British Point of View," an editorial article on "The Settlement of the Machinists' Strike in the United States," and a splendidly illustrated description of the "Power Features of the Paris Exposition, by Mr. W H Donner.

Two other richly illustrated articles are presented in this issue—one by Waldon Fawcett, on the "Ship-Building Yards of the United States," the other by H Mortimer Lamb, on "Mining in British Columbia." Prof. Diemer contributes the second of his series on "Commercial Organization of the Machine Shop"; Mr. G L Alden's review of the "Electrical Measurement of Energy," showing its wide uses, and Alton D Adams has a valuable and suggestive discussion of the means of "Utilising the Waste Heat from the Gas Engine."

The Review and Index of the Engineering Press concludes an unusually rich and handsome number.—The Engineering Magazine, New York.

Engineering Development of China.

In solid, stationary structures, the Chinaman can supply his own needs unaided; but the field for producing those aggregations of engineering and mechanical skill based on the theory or application of movement, especially of economical movement, lies unbroken and the soil is rich. The idea of economy in movement is absolutely lacking in the Chinese—a singular circumstance, as there is no other nationality so strongly economical, even to the point of parsimony, as the Chinese. This trait is shown in his dwellings, in his clothes, and in all his details of living, except in those where movement is the main theme. The development that is to come will be, therefore, along this line, and will show itself primarily in methods of moving people and goods—namely, in means of transportation; in the methods of moving the great untouched mineral wealth from its existing subterranean hiding places to the surface; that is, in mining; and thirdly, in all matters of construction whose parts are moving—namely, machines.

If, therefore, I was asked to enumerate the relative importance of engineering development, I should reply—means of transportation; hydraulic machinery; mining; and then, those machines which can compete against a very low-priced manual labor, and which can, if possible, enter a field of work not now undertaken, such as electric lighting.—Wm. Barclay Parsons, in the Engineering Magazine for July.

THE AGE OF COMBINATIONS.

This is an age of gigantic corporations, says Henry Clews in his latest circular. We have experienced it in connection with railroads and more recently on a larger scale still in the formation of industrial, the amount of which during the past year has exceeded \$5,000,000,000. All other combinations, however, are far outdistanced for vastness and uniqueness by the combination just formed of all the leading nations of the world against China—the most populous nation on earth. As an evidence of this, the following figures are convincing, showing the population of the various countries now united with this common object: United States, 80,000,000; Germany, 52,000,000; France, 38,000,000; England, 40,000,000; Russia, 80,000,000; Japan, 45,000,000; total, 335,000,000, versus 400,000,000 Chinese. A successful termination of this novel warfare, it is hoped, will cause a lasting union of friendship between all the great Powers, and thereby do away with any further apprehension of future clashing of arms between them. This would indeed be the millennium.

CAMP BRIGHTON.

The soldiers at Camp Brighton had a half holiday on Dominion Day.

The maple leaf was much in evidence fastened to the uniforms.

Bugler Victor Lord has come off duty as bugler of the guard. Victor belongs to No. 6 Company and is a general favorite with all ranks.

At tent inspection Colonel Moore expressed himself as highly pleased with the camp in general.

Sergeant Duncan and Corporals Auld and Blue of No 6 strove to attain first place, but here as well as elsewhere everyone cannot reach the top of the ladder.

Soldiers in camp are not living in parlors with a piano in the corner. Their life is one of activity and hardship.
