Globe Loan & Savings Co., cor. of Victoria and Lombard Sts., Toronto.

E. W. Day, Manager Globe Loan & Savings Co., says:—"I consider Dr. Chase's Ointment invaluable." We have thousands of testimonials from prominent business men all over the Dominion.

A Marvelous Time Measurer.

As illustrating the triumphs of modern science in the construction of instruments of precision The Scientific American instances a chronograph for recording infinitesimal intervals of time, such as a millionth of a second or less, which is stated to have been used to record autographically the compression by a blow of a cylindrical piece of copper. In one case a 33 pound weight fell 15 inches and produced a permanent compression of .1658 inch in a copper cylinder, the time consumed in producing this compression being .0030317 of a second. The machine produces by means of photography a curve showing the precise progress of this compression. The chronograph which reaches such remarkable results consists of a rotating cylinder, with a surface velocity of 100 feet a second, on which is photographed a pencil of light, which is passed through a hole in the end of a rapidly vibrating tuning fork. The delicacy of this instrument is far greater than that of the ordinary tuning fork chronograph recording on a surface blackened by smoke.

Piles Cured Without the Knife by Dr. A. W. Chase's Ointment.

Mr. Geo. Crowne, painter, of Woodville, Ont., Victoria Co., says:—"For thirteen years I was a sufferer from bleeding piles and the intense agony which I passed through during those years and relief I obtained by Chase's Ointment. My physician wished me to have an operation but I felt I could be cured without the knife. Three boxes of Dr. Chase's Ointment stopped the bleeding and effected a permanent cure.

HOTEL ARRIVALS.

Queen Hotel: Geo E Streeter and wife, Toronto; J W Calbeck, Auguine Cove; Rev W H Smith, Ferrona, N S; E A Thornton, Toronto.

Hotel Davies: T Hudson, Picton; J H Cross, R P Ingles, Montreal; D M Preston, S W Habart, Toronto; M E Maloney, Montreal; C L Baxter, Portland; R McHaffie, Hamilton; Mr and Mrs R W Traver's, Hamilton.

Asthma Gasps.

The wheezing and strangling of those who are victims of Asthma are promptly relieved by a few doses of Dr. Chase's Syrup of Linseed and Turpentine.

Tennyson's Message

TO OUR GENERATION" BY THE LATE REV. D. SUTHERLAND

Advertisement for DEADLY SEA SNAKES. Text: 'Not only do various reptiles and other queer creatures abound in the forests and swamps of the Philippines, but the surrounding water of these interesting islands team with veritable sea serpents. These strange creatures, which pass their entire existence in the water, possess deadly fangs. They are a great menace to the fishermen, who are constantly exposed to their attacks. Technically speaking, science has named the group the Hydrophidæ. They differ from the terrestrial snakes only in the possession of a flat, paddle-like tail. These reptiles inhabit the tropical seas of the old world and occasionally attain a length of 8 feet. Dr. Rudolph Weber, professor of drawing in Princeton university, observed large numbers of these creatures while on a steamer bound for Sumatra. Dr. Weber was in charge of a scientific expedition and naturally took special notice of them. He says that when the vessel was some 60 miles off the coast myriads of sea snakes could be seen swimming about as far as the eye could reach. They kept upon the surface, and several distinct species were recognized among them. During calm weather these reptiles may be seen sunning themselves upon the surface of the sea, remaining motionless except for a slight undulation caused by the movement of the water. When alarmed, the agile reptiles dive like arrows, leaving a train of bubbles behind them. Some species are extremely brilliant in coloration, being bright yellow, banded with black, while others are tinted with delicate shades of green. The food of sea snakes consists entirely of fishes. Frequently fishes armed with long sharp spines fall victims to their appetites. Among these are the apogous and siluroids, which are furnished with spines three and five inches long. But these do not embarrass the voracious reptile in the least. The victim is first killed by the snake's poison, after which it is swallowed head first. The spines, naturally pointing toward the tail of the victim, and being relaxed in death, are compressed against the body of the fish as deglutition proceeds. While in search of their prey, sea snakes sometimes venture a short distance up the mouth of large rivers. Dr. Weber records an instance where he was fishing in one of the rivers on the east coast of Sumatra. He was using a dragnet and had cornered a number of medium sized fish. As the net was being brought in, two large sea snakes suddenly made their appearance inside. They showed no signs of uneasiness at capture, but were hurriedly gobbling down the cornered fishes. Nor did they cease operations until the last fish had disappeared, when the formidable creatures made their escape. Being air breathers, the sea snakes lead a similar existence to the whale. Scientists have expressed much interest as to how long they can remain under water. Professor R. P. Wigfield of the American Museum of Natural History, while dragging for corals, saw a large sea snake lying motionless among some coral growths, some eight feet below the surface. It showed no signs of fear and remained in the same position for half an hour. The venom of these reptiles is even more deadly than that of the cobra. The fangs are very short, and consequently do not penetrate so deep as the fangs of most serpents, but only a scratch from them is necessary to produce serious results. Owing to their great shyness accidents are very rare. When cornered, they snap upon a victim. As the eyes are adapted only for use in the water they strike blindly when brought into the air, although living for days when removed from their native element. Many specimens hoisted up in fishermen's nets have been sent to zoological gardens. The London gardens even went so far as to build a special tank for their accommodation. But these captured specimens either die en route or a short time after being placed in captivity. Seeking a dark corner of their tank, they refuse all food and ultimately starve to death. Around the numerous volcanic islands of the Malay archipelago these reptiles are particularly numerous. Frequent eruptions occur among these islands, which are hardly more than the body of the volcano. During the time of an eruption the few people residing near by take to the water in their boats to escape the rain of ashes and mud. It is generally a case of jumping from the frying pan into the fire, however. At such times the sea becomes uncomfortably warm from its close proximity to the burning mountain, and the sea snakes swim wildly about for escape. They endeavor to climb over the gunwales of the refugees' boats, while they twine their bodies in great masses about the forward chains. When about to lay their eggs, these serpents approach the shore. The eggs are laid above high water mark and left to hatch by the heat of the sun. Many creatures prey upon the young reptiles. Among their enemies are sharks and other large fishes, while the adults, in spite of their death dealing fangs, fall victims to sea eagles and large gulls. After the great typhoons, which are common in the Philippines and their vicinity, many of these creatures may be found along the beach, where they have been cast up during the storm and killed by the violent pounding of the waves.—New York Times.
