NOVA SCOTIA COAL - THE THRIFTY FUEL

USE NOVA SCOTIA COAL With a coal-burning furnace of modern design which is fed by an automatic stoker, a very steady heat can be obtained because there is always a fire burning in the furnace. Consequently, the temperature of the water in the heating system may be kept practically constant. A constant temperature may be obtained in the home if the system is provided with adequate controls. This constant temperature which gives a maximum of comfort is not obtainable from other fuels. Where fuels other than coal are used the fire is extinguished entirely when a pre-determined temperature is reached in the home. This results in a temperature variation of as much as six degrees with the attendant discomforts which such a variation causes. You can avoid this temperature variation by using Nova Scotian coals in the proper furnace. Give your family the comfort of a steady heat in the winter months by using Nova Scotian coals. Protect Your Future - Use Nova Scotia Coal DOMINION • ACADIA • OLD SYDNEY • SPRINGHILL PRODUCED BY DOMINION STEEL AND COAL CORPORATION, LIMITED
