Beauty

Is desired and admired by all. Among the things which may best be done to enhance personal beauty is the daily use of Ayer's Hair Vigor. No matter what the color of the hair, this preparation gives it a lustre and pliancy that adds greatly to its charm. Should the hair be thin, harsh, dry, or turning gray,

Ayer's Hair Vigor

will restore the color, bring out a new growth, and render the old soft and shiny. For keeping the scalp clean, cool, and healthy, there is no better preparation in the market.

"I am free to confess that a trial of Ayer's Hair Vigor has convinced me that it is a genuine article. Its use has not only caused the hair of my wife and daughter to be

Abundant and Glossy,

but it has given my rather stunted mustache a respectable length and appearance."—R. Britton, Oakland, Ohio.

"My hair was coming out (without any assistance from my wife, either). I tried Ayer's Hair Vigor, using only one bottle, and I now have as fine a head of hair as any one could wish for."—R. T. Schmittou, Dickson, Tenn.

"I have used Ayer's Hair Vigor in my family for a number of years, and regard it as the best hair preparation I know of. It keeps the scalp clean, the hair soft and lively, and preserves the original color. My wife has used it for a long time with most satisfactory results."—Benjamin M. Johnson, M. D., Thomas Hill, Mo.

"My hair was becoming harsh and dry, but after using half a bottle of Ayer's Hair Vigor it grew black and glossy. I cannot express the joy and gratitude I feel."—Mabel C. Hardy, Delavan, Ill.

Ayer's Hair Vigor,

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.

New Safety Rein.

An English paper says: A party of gentlemen assembled the other day on a quiet corner of Wimbledon common, near Rochampton, for the purpose of witnessing a trial of Serjeant's new safety rein. The invention, like many other useful and beneficent discoveries, is of the simplest character, and the natural impression produced by the first inspection is a feeling of wonder that no one ever thought of it before. It may seem a marvellous statement, but really the principle of the invention is this, that in driving or riding, the tail of horse is a more important factor than the head, so that all these years people have been steering the animal from the wrong end. Mr. Serjeant's reins are nearly twice as long as the ordinary pattern, and instead of being fastened to the bit are secured to a ring on the crupper or tail strap. Thence they run through other rings which are fastened to a strap that may be buckled on the saddle or even on the belly-band, according to the character of the horse and his vicious propensities. From this point the reins pass to rings on the bit and thence to the hands of the driver. Thus it will be seen that when in use the rein forms a kind of inverted triangle on either side of the horse, and the effect is to subject the horse to the complete control of the driver. Not only so, but the greater the effort of the horse to get his own way the more does he assist the controlling power of the driver. The inventor claims for his rein that it guarantees perfect safety, and prevents the cruelty of a bearing-rein or a severe bit. He alleges it will check the runaway, and cure the most determined jibber, kicker, or bolter, while it renders it impossible for a horse to indulge in such upleasant practices as pulling, shying, star-gazing or buck-jumping. Remembering that scarcely a day passes without the occurrence of some serious and even fatal accidents from horses shying and bolting, this invention merits the fullest investigation and experiment, and, if it proved to fulfil expectations, it well deserves to be brought into general use. The experiments carried out were satisfactory so far as they went. Half a dozen of the most vicious-looking specimens of the equine family that could be got together at once were assmbled for trial. To make the test complete these animals should, of course, have been driven with an ordinary rein first, but no one present was inclined to attempt the task. The first selection was a thoroughbred chestnut mare with a vicious eye, bua a pretty creature enough to look at. She was said to be an incurable kicker and to have an inveterate dislike to any rein whatever. After a brief show of puzzled fretfulness she succumbed gracefully, and described a circle as tamely as any circus performer. A black mare gave a great deal more trouble. Anyone could see what a rogue she was; bad temper bristled from every point, and her legs and hocks were covered with sores old and new, the results of numerous mad freaks. She tried all she knew for fully twenty minutes to kick, rear, and bite, but eventualiy gave in to the novel force that had been applied. No. 3 was a hot-headed grey hunter, who accepted the situation after a very brief contest. Then a kicking mare, that had smashed many a trap, was brought on the scene, but after capering about and vainly trying to indulge her special weakness, she, too, made a virtue of necessity. A confirmed bolter was the last to bear testimony to the efficacy of the new system. There was a sixth in reserve, an Irish mare who had manifested a strong penchant for jumping through shop windows when opportunity offered, and whose ordinary methods, when in harness, included rearing, jibbing, and lying down in the road. Unfortunately she had so damaged her forelegs overnight in the stable that she was too lame to be experimented upon. These sorry specimens of the noble but vicious animal had been collected at a day's notice, and had never before been tried with the new rein, but none of them succeeded in opposing any successful resistance. It may be added that the appliance is simple and graceful, and, if anything, rather improves the general appearance of a horse in harness. Mr. Serjeant, who has had experience in training horses in several parts of the globe, has had the benefit of the advice, in this country, of Dr. Northcott, who has long taken a practical interest in the best methods of securing safety and preventing cruelty in driving.

Summerside Exports.

Summerside, Oct. 16.—Shipped per steamer St. Lawrence, Cameron, master, for Point du Chene,—

67 cases eggs	$ 362
1135 bags potatoes	284
142 lbs butter	28

A New Comic Opera.

London advices say that Sir Arthur Sullivan and Mr. Gilbert will come before the public in the latter part of November at the Savoy Theatre with a new light opera, which is still without a name. Though the piece has not been read yet, a chorus rehearsel has been held at the Savoy with locked doors and other symptoms of secrecy. The subject of the new opera is a Venetian Doge, who is the principal character. By ties of birth and association he is an aristocrat, at heart he is a thorough Republican. He goes among the people in disguise and urges them to upset the Doge. The Council of Ten finally obliges him to take an oath to kill the man of the people, and the populace on the other hand then compels him to swear to kill the Doge. The principal character is thus apparently on the brink of a precipice, but is rescued by Gilbert in his usual happy manner. The new opera will not differ from other efforts of Mr. Gilbert. The Council of Ten will have a thumb-twiddling chorus, and a lot of Venetian noblemen will sing "We are young men of Venice," and play at lawn tennis in jackets of various hues. Some of the principal characters visited Sir Arthur Sullivan a couple of days ago. He played some of the concerted pieces for them.

Successful Surgery.

In the *Lancet* for Dec. 20, 1884, Dr. Bennett and Mr. Godlee published an article which startled the surgical world. Dr. Bennett had diagnosticated not only the existence, but the exact locality of a tumor in the brain, of which not the least visible evidence existed on the exterior of the skull, and asked Mr. Godlee to attempt its removal. The head was opened, and the brain exposed. No tumor was seen, but so certain were they of the diagnosis that Mr. Godlee boldly cut open the healthy brain, and discovered a tumor the size of a walnut, and removed it. After doing well for three weeks inflammation set in, and the patient died on the 26th day. But, like the failure of the first Atlantic cable, it pointed the way to success, and now there have been 20 tumors removed from the brain, of which 17 have been removed from the cerebrum, with 13 recoveries, and three from the more dangerous region of the cerebellum, all of which proved fatal. Until this recent innovation every case of tumor of the brain was absolutely hopeless. The size of the tumors successfully removed has added to the astonishment with which surgeons view the fact of their ability to remove them at all. Tumors measuring as much as three and four inches in diameter, and weighing from a quarter to over a third of a pound, have been removed, and the patients have recovered.

Savings the Foundation of Wealth.

The man who saves something every year, quotes a contemporary, who had heard the remark from every quarter, is on the road to prosperity. It may not be possible to save much. If not, save a little. Do not think that a dollar or a dime is too small a sum to lay by. Everybody knows how little expenditures get away with large sums But few seem to know that the rule is one that works both ways. If a dime spent here and a dollar there soon makes a large hole in a man's income, so do dimes and dollars laid away soon become a visible and respectable accumulation. In this country any man can make himself independent or keep himself under the harrow for life, according as he saves or wastes his small change.

The United States in 1990.

Gen. Meigs has been exercising his mathematics on the problem of what the population of the United States will be one hundred years hence. He places at the end of this century a population of nearly 90,000,000 (89,653,343), by the middle of the next century 383,763,837, and before its close, that is, in 1990, 2,296,662,248, or the population of the globe at the present time. This will give 399 persons to the square mile, England having now 389, China 420, and Belgium 434. "Such a nation," says Gen. Meigs, "will have a power and a commerce and industry not heretofore known to the world. Our ships and those of our allies will bring the spare products of every land to our shores Systems of interior land and water transport, perhaps mostly operated by electric power, will rapidly and cheaply distribute them." For New York city a population of 30,000,000 is prophesied for 1990 and a total urban population at that date of 240,000,000.

Odds and Ends.

Mr. Fastandloose—"Marriage is a very serious business." Mr. Candid—"Are you contemplating it?" "I am." "Well, I should say it is a mighty serious business for the girl, whoever she is."

Harry—"Annie, I hope you do not think me silly when I tell you how much I love you?" Annie—"Really, Harry, I don't see that whether you love me or not has anything to do with the question."

Among specimens of children's essays lately published, the London *Hospital* cites a very pathetic one on "The Doctor," by a small boy who eventually died of brain fever. "The doctor has seen me three times for the purpose, cuz I have headaches. My mother looks at me, and cries when he's gone. I never tells mother I have headaches, except it hurts me very much. I love my mother. I wish my head was same as other boyses. Yesday I arskt Webster if he ever felt dizzy, and he said no. All boys I ask says no. What the doctor gives me makes me feel worser. But mother likes me to take it, so I don't mind. I wish I was a man, but I'd rather be a woman like mother. Doctors havn't loud voices like men you hears in the street, but their eyes are brighter. I am not so frightened of doctors as of perlice."
