Lobster Boats Awaited Starting Whistle

Seven boats at Summerside awaited the starting whistle of Fisheries Inspector P. C. Martin at 12 Noon, Standard Time, when the lobster fishing season opened on the south side of the Island. The task of loading the traps aboard the boat was completed in mid-morning, and about 11:30 a.m. lines were cast off and the crews cruised around in the water between Holman's Wharf and the new Marine Wharf as they impatiently waited for the noon starting whistle which headed them through the choppy waters of the harbor past the light house to still rougher water on the fishing grounds beyond. The crews of the three boats above kept an anxious eye on the Fisheries Inspector as they await his starting signal, and in the background is a part of the new frostproof potato warehouse which is presently being constructed on the Marine Wharf.—(Photo by Wotton).

When potato blight is here don't take chances • DEPEND ON DITHANE

TESTED — APPROVED — ACCEPTED BY P. E. I. GROWERS

Can you afford to risk a year's crop by using an untried fungicide for blight control? Most successful growers say no... that's why they're using DITHANE. Many claims are made about fungicidal effectiveness, but only DITHANE offers proof of safe, sure blight control—protection for top growth and vines.

Year after year successful potato growers turn to DITHANE to fight blight because they have seen for themselves, in actual side-by-side tests, how DITHANE keeps fields blight-free and actually increases yields. In grower demonstrations DITHANE-protected fields consistently out-produced crops treated with other materials by an average of 49 bushels per acre, with more No. 1's in every bushel.

These facts are important to you because the wrong choice of a fungicide can mean the loss of an entire crop. It's happened before!

With DITHANE in your rig you're sure of adequate protection from blight.

Here are just a few reasons why:

- DITHANE stops blight before it starts—keeps clean fields clean and halts blight in infected fields even though it has attacked the crop.
- On a yield-per-acre basis, DITHANE is an economical fungicide to use. What's more it's easy to use as a dust or spray.
- DITHANE promotes healthy growth—won't burn or stunt vines and foliage. And your equipment is safe because DITHANE will not clog or corrode spray or dusting rigs.

Remember, these are facts... not claims, because DITHANE has been "field-proven" as best against blight.

Prove it to yourself. Ask your dealer for DITHANE, as your neighbors have been doing for years. You'll get sure protection for your crop.
