## Wall Paper Remnants To-Day

We've just been sorting up and arranging our wall paper stock.

Found a number of small lots—too small to include in our "99" samples.

Some for Parlors.

Some for Bedrooms.

Some for hall, kitchens, dining rooms etc., etc.,

We want the room. So we've tied up each lot, paper and border together marked them at a fraction of their cost placed them on sale—second floor.

Perhaps enough for three or four days selling—(about 200 lots)—but if you're wise you'll be here to day.

## MOORE & McLEOD

### J. ISRAEL TARTE'S PECULIAR WAYS

#### Win the Bye-Election Yesterday.

#### PROMISE TO DEEPEN THE HARBOR WON MANY VOTES.

But the Conservatives Made Gains in Country Districts.

(SPECIAL TO THE EXAMINER.)

GODERICH, Ont., Feb. 22.—J. I. Tarte's peculiar ways won the bye-election for the Grits yesterday.

Holmes the grit candidate was elected by a majority of 120.

The vote in Goderich and Clinton, which was largely effected by Tarte's promises to deepen Goderich harbor and build an air line to Toronto, was responsible for the grit victory.

In the country districts the Conservative candidate made great gains.

#### Another Conservative for N. B.

St. JOHN, N. B., Feb. 22.—In St. John today the sheriff declared Shaw, a Conservative, elected over Reynolds.

A card on the outside of office door says: "Gone to lunch. Be back in ten minutes." And the man will be there on time. That is, for some days, weeks or even months, he will. Then he will be at home occasionally for a day. He'll tell you he had a headache—a turn of cholera morbus, or maybe he'll say he had a lump in his stomach and felt too miserable to move. The lump was probably two or three ten-minute lunches condensed.

The man who "bolts" his lunches will find Dr. Pierce's Pleasant Pellets the best friend he ever met.

This is no case of biliousness, constipation, indigestion, "heart burn," or any of the rest of the night-mare brood that these little "Pellets" will not cure. They cure permanently. Send 31 cents in one-cent stamps to World's Dispensary Medical Association, Buffalo, N. Y., and receive Dr. Pierce's 1008 page "Common Sense Medical Adviser," profusely illustrated.

We have only 7 pairs of those imported blankets left; 3 pair worth \$3.00 now \$1.75; 2 pair worth \$3.50 now only \$2.00; 2 pair worth \$3.75 now \$2.25; at the Bargain Corner Prowse Bros.

Dress Goods, Corsets, Hose, Gloves, Embroidery, Laces etc, 33 1/2 p c off at the Bargain Corner Prowse Bros.

39c Dress goods sale now on at Stanley Bros—This is not a common sale of Dress Goods, nor a sale of common Dress goods but a sale of High Grade Fashionable Stuffs at the popular price introduced by us for these Sales 39c per yard. Stanley Bros. 2 in

#### MEMBER OF PARLIAMENT.

#### Accidentally Shoots himself With a Revolver.

(SPECIAL TO THE EXAMINER.)

OTTAWA, Feb. 21.—R. W. Jamieson, member of Parliament for Winnipeg, shot himself dead at his residence last evening while handling a revolver.

Jamieson attended the Board of Trade meeting yesterday.

He had dinner as usual with his family and after it discussed the danger of carrying firearms with the members of his family.

He pulled a revolver from his pocket and began examining it.

His wife turned her back for a moment and heard a loud report. The weapon had been discharged.

The bullet entered Jamieson's mouth and passed through the back of the neck causing instant death.

#### Lady Curzon Decorated.

(SPECIAL TO THE EXAMINER.)

LONDON, Feb. 22.—The official Gazette announces that the decoration of the imperial order of the Crown of India has been conferred upon Lady Curzon, wife of Lord Curzon of Keleson, Viceroy of India.

#### Rev Dr Bridgeman Dead.

(SPECIAL TO THE EXAMINER.)

NEW YORK, Feb. 22.—Rev. Dr. Charles Dewitt Bridgeman is dead.

#### Crescents Defeated.

(SPECIAL TO THE EXAMINER.)

St. JOHN, Feb. 22.—The Mohawks defeated the Crescents, Halifax hockey team 1 to 0.

#### PECULIAR POISONS-

#### GENERATED IN THE HUMAN BODY.

#### The Result of Imperfect Digestion of Food.

Every living thing, plant or animal, contains within itself the germs of certain decay and death.

In the human body these germs of death (called by scientists Poisons) are usually the result of imperfect digestion of food; the result of indigestion or dyspepsia.

The stomach, from abuse, weakens, does not promptly and thoroughly digest the food. The result is heavy, sodden mass which ferments (the first process of decay) poisoning the blood, making it thin, weak and lacking in red corpuscles; poisoning the brain causing headaches, pain in the eyes.

Bad digestion weakens the heart, causing palpitation and finally bringing on disease of this very important organ.

Poor digestion poisons the kidneys, causing bright disease and diabetes.

And there is so because every organ, every nerve depends upon the stomach alone for nourishment and renewal, and weak digestion shows itself not only in loss of appetite and flesh, but in weak nerves and muddy complexion.

The great English scientist, Hurley, said the best start in life is a sound stomach. Weak stomach fails to digest food properly, because they lack the proper quantity of digestive acids (lactic and hydrochloric) and peptogenic products; the most sensible remedy in all cases of indigestion, is to take after each meal one or two of Sturats Dyspepsia Tablets, because they supply in a pleasant, harmless form all the elements that weak stomach lack.

The regular use of Sturats Dyspepsia Tablets will cure any form of stomach trouble except cancer of the stomach.

They increase flesh, insure pure blood strong nerves, bright eye and clear complexion, because all these result only from wholesome food well digested.

Nearly all druggists sell Sturats Dyspepsia Tablets at 50 cents full size package or by mail by enclosing price to Stuart Co., Marshall, Mich, but ask your druggist first. A little book on stomach diseases mailed free. Address Stuart Co, Marshall, Mich.

#### NATURAL HISTORY SOCIETY.

#### Interesting Paper by Mr. Thomas May

Interest in the meetings of the Natural History and Antiquarian Society is evidently increasing. The audience at the meeting of last evening was larger than usual. President Newson occupied the chair; and Mr. W. A. Bentley acted as secretary.

Mr. Thomas May read the following paper.—

#### UPS AND DOWNS IN THE LIFE OF PRINCE EDWARD ISLAND.

About thirty odd years ago I was travelling by public stage from Charlottetown to Lot 9. On my way there I crossed Lots 12 and 11, and was struck by the level nature of the country; the long stretches of barren land, the gravelly nature of the soil, and the frequent boulders to be seen scattered about, lying on the surface of the ground. These boulders were of hard grey stone, entirely different from the red sandstone to be seen in the rocks all over the country. A few years after this I made a survey of a tract of land on Lot 11 which had supplied the railway contractors with material for ballasting the road-bed of the railway. This tract of land consisted of a gravel bed about twenty acres in extent and about seven feet deep. The gravel consisted of hard grey, yellow and white pebbles, of little more than half an inch in diameter on the average, mixed up with yellow sandy clay. Again last autumn, when making a survey on Lot 12, I travelled from Ellerslie Station along the South Junction Road to the Western Road. I observed along the sides of the fields piles of grey stones, all of moderate size, some about a foot in diameter, most of them a great deal smaller, which had been picked up off the fields. They were more or less angular in shape, with the sharp edges somewhat worn off. Captain Richards, of Bedford, informed me that he had formerly shipped hundreds of tons of these stones for ballast. On the fields themselves one could see thousands of smaller stones which were too small to pick up. There did not seem to be any clay or gravel mixed up with them. The question is how did these foreign boulders, stones, gravel and clay come there? The usual answer is that they were brought there by ice. This can be accepted as a general answer, as we know of no other agency capable of bringing large blocks of stone a hundred miles or so from distant mountains where it is now found the same kind of rock as that of which the boulders consist, to a level country with no higher land immediately surrounding it and which is cut off from the mainland by the sea.

But were they brought here by glaciers moving over the face of the earth, or by icebergs floating in the sea? I think by the even distribution of the boulders, stones, gravel and clay over the surface of the ground, and no appearance of any disturbance after being deposited, that they were deposited by icebergs floating in deep water. So then I venture to conclude that our Island was at this period at the bottom of the sea. Then we want to know what was the probable depth of the sea at that time. This can only be guessed at, but it may be arrived at approximately by observations made elsewhere. Last autumn I spent ten days in Halifax, and during that time I went frequently to the park, which as many of you know is situated at the extremity of the peninsula formed by Halifax Harbor and Bedford Basin on the one side and the North-West Arm on the other. One day when walking out there I noticed near the entrance situated next to Halifax Harbor a rounded rock about 5 feet above the level of the sea and jutting out about 50 feet from the shore. I immediately walked out to it, and found, as I expected, that it was a rock over which a glacier had travelled. The rock was comparatively hard and its strata was inclined at an angle of about 30 degrees with the horizon. Its surface however was almost perfectly smooth, as if planed by a huge plane. In fact the rock looked like the top of a polished globe. But on looking closely at this smooth surface numerous lines or grooves could be seen, all parallel or nearly so, and pointing in the general direction of Halifax Harbor, that is, of the valley of which the harbour and Bedford Basin are a part. Now these lines or grooves were caused by stones or boulders imbedded in the bottom of the glacier as is known from observations made on existing glaciers. Continuing my walk to the other side of the park, about a mile away, on the northwest arm, I found another rock on the bank about 30 feet above the shore, smooth and polished like the previous one, and with parallel lines and grooves on the surface pointing in the general direction of the valley of the Northwest Arm. A few days afterwards I made another exploration of the park and found on the very summit of the hill dividing the two valleys of Halifax Harbor and the Northwest Arm, on the ridge of which the citadel is built, and at a height of about 200 feet above the level of the sea, another smooth rock with numerous lines and grooves on its surface all pointing in one direction. I had no means of ascertaining whether this direction was the same as the two previous ones. The first thing that these rocks indicated

(Continued on Fourth page)

#### Dr. Montizembat Promoted.

(SPECIAL TO THE EXAMINER.)

OTTAWA, Feb. 22.—Dr. F. Montizembat for the past five years General Superintendent of Quarantines has been appointed director general of public health with headquarters at Ottawa. His duties will be to act as sanitary advisor of the Dominion Government as General Superintendent of Quarantines and as inspector of the Tracadie lazaretto.
