

New Contract For Seafarers May Have Big Significance

MONTREAL (CP) — A new contract for some 6,000 members of the Seafarers International Union of Canada (I.U.C.) may have long-term significance for the Great Lakes shipping industry, a spokesman for the board of maritime trustees said here.

The proposed contract provides substantial wage in-

creases and the industry's first portable pensions plan.

It is the first contract negotiated since the trustees took over and since Hal C. Banas was appointed as president of the SIU. Negotiations for a new contract now are under way.

But in the long run it may be significant "as the beginning of a union-management relationship in this industry," the spokesman said. Every Great Lakes shipping company except Upper Lakes is represented by the Canadian Maritime Union (C.M.U.).

TO PAY OVERTIME

The proposed contract would increase sailors' wages by 8.4 per cent, retroactive to June 1, 1964. In the second year, wages would increase a further 5.4 per cent and in the third year would go up another 5.7. Basic wage for a deck seaman now is roughly \$347 a month.

In addition, the industry has agreed to pay time and a half for overtime, for the first time in history.

A portable pensions plan is to take effect Jan. 1, 1966, covering sailors with five years of service and enabling them to retire at 60.

It means that a Great Lakes

sailor will be able to ship with a number of different companies and carry his pension with him every time he changes employers.

If the federal government's Canada Pension Plan takes effect during the life of the new contract, seamen will receive \$100 a month from the private plan. If the federal plan does not take effect, the monthly payment will be \$144.

France's attitude toward the North Atlantic Alliance. Mr. Spak was here Wednesday.

Mr. Lange said President de Gaulle seems to look on NATO as an old-fashioned military alliance, useful in wartime but unable to play a constructive role in peacetime as an instrument of Western policy. This was not the conception of NATO Canada and Norway had.

Every effort must be exerted to eliminate this dividing line in NATO, Mr. Lange said.

Canada and Norway were much concerned that NATO develop into a real political force and an active element in international affairs as far as the East-West problem was concerned.

Mr. Lange said political consultations in the NATO council should be intensified so they became a joint effort in working out common policies rather than an exchange of information.

CHINESE PROVINCE

Siakang, in the remote west of China, is the country's largest and least populated province, four times bigger than

France's attitude toward the North Atlantic Alliance. Mr. Spak was here Wednesday.

Council Fathers Critical Of Missionary Work Paper

VATICAN CITY (AP) — A document on missionary activity—provoked "easily," EMPHASIZED BY POPE predicted easy approval—was bitterly assailed by prelates in the Vatican ecumenical council.

Council fathers speaking for hundreds of Roman Catholic bishops denounced the document as weak, too general and unacceptable.

Not one of the 17 council fathers who spoke in the debate in St. Peter's Basilica defended the document. Many called for an entirely new document.

The attack—one of the most massive against a single council document since the assembly opened in 1962—came the day after Pope Paul had said there was much to praise in the text. He said this when he personally opened debate on the missionary topic Friday. He too said there was need for improvement in the text but added

mission work and the importance of co-operation and support for it in the church.

Many of the missionary bishops consider the document so brief as to be useless. They want extensive detailed discussions of such specific items as regular church assessments in current orders being worked out.

The company said it is expected the last order will be finished in April, 1965.

Nearly 90 per cent of all commercial wax is made from paraffin, a mineral found in petroleum.

Hawker-Siddeley Closing Plant

TORONTO (CP) — Hawker-Siddeley Canada Ltd. is closing its Canadian steel improvement division, employing 300 people, in suburban Etobicoke.

The plant was opened in 1951 to make jet engine blade forgings for Hawker Siddeley's Orca division. It also has turned out precision forgings and aluminum castings for the Canadian and United States defence industries.

"In recent years there has been a declining demand for such products and although commercial work has been

available to partially fill the gap, it cannot support a facility primarily set up for military requirements," the company statement said.

J. W. Ames, Hawker Siddeley vice-president, said the plant will be closed gradually, with regular church assessments in current orders being worked out.
