Sock Menders. Regular 35c. **20c** Priced to clear at

MOORE & McLEOD limited

Plants That Serve Mankind

By F. H. MacArthur

Civilization could not go on without plants. They provide mankind with clothing, medicines, food, drink and building materials of many kinds. From the plant kingdom comes rubber for footwear and for the tires on our automobiles.

The great ocean liner tied to their piers are held fast by cables made from the fibre of a humble plant. These are but a few of the uses to which we are indebted to the plants, and we could go on and on without seeming to exhaust the list.

Take, for instance, the great coal deposits found in different parts of the earth. How did they get there? Well, to answer this question, we must go back to prehistoric times when the earth was covered with dense growth of vegetation. This decaying plant-life worked into the ground, later to form a solid substance, which in time was dug up and given the name of coal.

With the advance of civilization, people began to cultivate many plants whose berries they knew were good to eat. Thus began man's first venture in agriculture, which has been carried on with marked success for thousands of years; but Nature still plays a major role in producing things for men to reap. Take the mushrooms, for instance; they spring up overnight and are to be had for the picking. In the South Sea Islands and other places, the coconut palm grows wild, providing the natives with food and drink and shelter; while in our own country may be found blackberries, strawberries, currants, blueberries, and many other small fruits that grow in or near the woods.

In pioneer days, these berries provided the settlers with fruits in seasons, but when large sections were opened up for farming, these berries became scarcer every year so that in time the inhabitants began to cultivate them.

The growing of the various kinds of cereals dates back to ancient times, and are to be found in one farm or another all over the world. The harder varieties such as barley and oats can be raised within the Arctic Circle; wheat does well in less cold regions such as the Western Plains and in Russia. On the other hand, cereals such as rice and millet require very warm climates.

Vegetables, too, form a large part of our diet, those that are classed as belonging to the tuber family as well as the numerous leafy varieties. Among the more important fruits and, especially, those that may be eaten without cooking are oranges, peaches, apples, dates, figs and plums.

From sugar-cane, we get our chief supply though the sugar-beet also provides mankind with a valuable quota. Peas, parsnips, oranges, dates and so forth are good sources of sugar content; and while discussing this subject, we must not forget the sap of certain trees such as the maple which, when boiled, produces a sugar of good quality. To flavor our foods, we use cinnamon, pepper, cloves, nutmeg and several other spices, all of which come from plants. In older times, these spices were used more freely than in our day—why? Because heavy spicing of food helped to keep it from spoiling. It also served as a disguise for the bad taste of food that had taken on a taint.

Even the daily beverages used to wash down our meals come from plants. The curious one-celled plants that multiply rapidly are yeasts for the making of bread and are called yeast. Ale brewers use yeasts in the manufacture of beer and ales. Then there's the tiny bacteria plants, some of which go to work in our cream to prepare it for churning. If it were not for this tiny plant, our butter would be sour and tasteless.

Bacteria also plays an important role in making nitrogen available to plants; in the retting of flax, in tanning hides, etc.

Plants had a wide use as medicine among primitive peoples. They provide a large proportion of the remedies found on druggists' shelves today—quinine for fever, digitalis for heart ailments, arnica for bruises and atropine for the treatment of the eyes.

We know by reading history that in warm countries men and women once wore clothing of grass and reeds. In the South Sea Islands the natives still wear aprons made of these materials. A visit to Plymouth, Massachusetts is worth while if only to see how certain plants are used to make cordage.

Among the useful wood plants is the bamboo, which is not a tree but a woody kind of grass. This plant has a wide variety of uses ranging from a fishing rod to furniture and building materials.

Rubber, of the purest kind, also

To Write Account Of Canadian Navy

JOSEPH SCHULL

Joseph Schull, commissioned by the Minister of National Defence, to produce an account of Canadian Naval Operations, which has been two years in preparation and will be on sale by the King's Printer within three weeks.

With the rank of Lieutenant-Commander (Special Branch) Mr. Schull served in the Navy during the war as Naval Intelligence and Naval Information Officer in Canada, Newfoundland and Europe. All records of the Naval Service were made available to him, as well as all preliminary narratives compiled by officers of the Naval Historical Section. Censorship has been applied only to the discussion of technical equipment still on the secret list.

DARLINGTON W. I.

Mrs. Angus MacLean entertained the members of Darlington Women's Institute for their monthly meeting on April 3. Meeting opened in the usual manner; roll call was answered by a gift for auction sale. There were six members and two visitors present. The minutes of the previous meeting were read and approved.

The committees gave their reports. School committee reported that school had been scrubbed. It was decided to get a plant for a shut-in at Easter.

The correspondence was read and discussed. A thank-you note was received for fruit sent. On motion, it was decided to buy \$5.75 food parcel and send to the U. E. F. B. fund.

It was moved and seconded to give \$10.00 to Red Cross. Collectors were appointed to collect in the district. The Government grant was received, \$25.00 was given to the R.N.K. An auction sale was planned for the next meeting, each member to invite two friends. Roll call to be answered by a joke. All members on lunch and programme committee. Collection amounted to 45. Programme consisted of reading and contests. A delicious lunch was served by the hostess.

comes from the milky juice of the tree called Hevea Brasiliensis. In this brief article I have tried to show some of the ways in which plants have served mankind.

BRONCHITIS COLDS—COUGHS!

It's when sickness comes at night—when you are far from the druggist—that's the time you need **Nerviline** most. Many experienced mothers are never without **Nerviline**. One of the children may have toothache, a chest cold or muscular pain. Without **Nerviline**—maybe a sleepless night for the entire household—but with **Nerviline** the pain and distress may be controlled. It may be earache, perhaps a stiff neck, or one of the kiddies coughing. Just think of the quick relief that **Nerviline** may give! A vigorous rubbing with this soothing liniment can abort many a minor illness. While it is on your mind, now, send for a 35c bottle of **Nerviline**.

You will be delighted with this fragrant tea

"SALADA" ORANGE PEKOE

MAKING THE BEST OF *Living*

This man started out for himself many years ago, and soon established a successful one-man business. Then came the problem that after his death his widow might be obliged to sell the business at a loss. Sun Life of Canada Business Insurance solved this. Now the enterprise will be purchased from his widow by senior employees of a figure set during his lifetime.

PLANNED LIFE INSURANCE BRINGS PEACE OF MIND

Without obligation, let me tell you how the facilities of the **SUN LIFE ASSURANCE COMPANY OF CANADA** can best meet your particular needs in a way that will fit your pocketbook.

HAL BOHAKER, Unit Supervisor

SUN LIFE OF CANADA

Charlottetown, P.E.I.

HE'S LATE

... in coming to your door, Mr. Canadian employer, but he deserves the same consideration you extended so well to veterans immediately after VE day.

He has much to offer. He's proven in several ways that he is willing to sacrifice time and pleasure to gain an objective—his latest, a degree after a long "unavoidable" absence from school.

If you can employ a graduate, or offer summer employment to an undergraduate, please phone or write the Executive and Professional Officer at your nearest NATIONAL EMPLOYMENT SERVICE office, NOW.
