

Griffin Fisheries Ltd. Build Filleting Plant at Souris

WE SAY -----

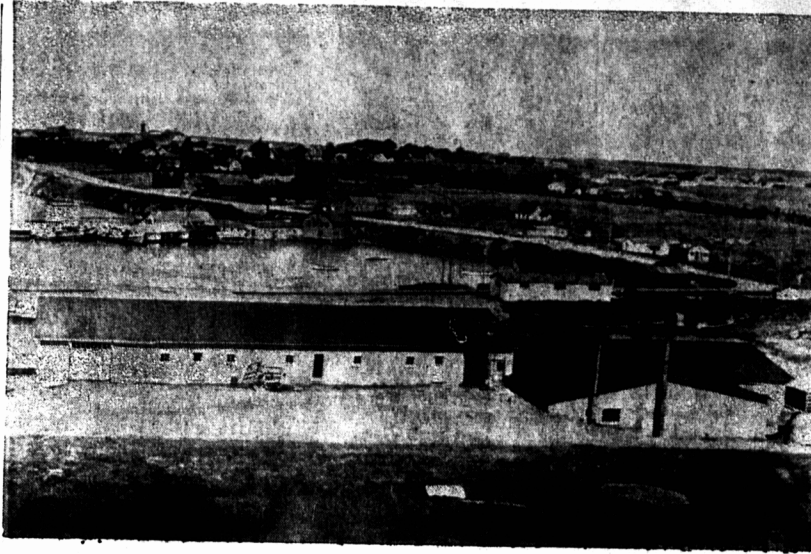

WELL DONE GRIFFIN FISHERIES LTD.
ON THE OPENING OF YOUR
FILLETING PLANT

It was a pleasure for us to supply and install the motors and controls in this plant.

PALMER ELECTRIC

96-100 Fitzroy St.

Dial 8543

Griffin Fisheries Limited, operated by Mr. Albert Griffin of Souris, has opened a large new filleting plant in Souris. The exterior of the building is pictured above.

This plant, which has been under construction for about fifteen months, has been built to handle 150,000 lbs. of raw fish per day. It is 205 feet long and 48 feet wide with an additional power house constructed on the side of 60X 32 dimensions.

The plant is fully equipped with the latest materials to fillet fish and Mr. Griffin has left no stone unturned in his efforts to turn out a first class product.

He dug a well 160 feet deep in order to obtain salt wash for the washing of the fish. The water is lifted from the well by pump and the salt water at pump temperature assures Mr. Griffin of the most sanitary product that can be processed.

In regards to equipment Mr. Griffin has installed in his plant three York compressors; a filleting line for 22 cutters; a cold storage room which will operate at 20 degrees below zero; a holding room for fresh fish which will be held at freezing temperature; an ice-making machine which will produce 25 tons of ice per day; and a storage space for 60 tons of ice.

Mr. Albert Griffin

The one filleting line with its 22 cutters which will go into operation when the plant opens will cut about 50,000 lbs. of raw fish per day. The plant has been built in such a way that two more filleting lines may be installed and thus turn out 150,000 lbs of fish per day if the need arises.

The plant will be powered by two Fairbanks-Morse diesel engines which give 170 h.p. Cod, Haddock Mackerel and flounders will be used in the filleting process. The fish cut in the plant will be of first class quality because the fish caught on the inshore boats will be processed the same day as caught while the dragger fish will be no more than four days old and they will be iced the same day they are caught.

In connection with the filleting plant Mr. Griffin built a fish meal plant this year. The fish meal plant will handle 100 ton of offal per day and other fish which are not suitable for filleting.

The fillets will be sold throughout Canada and the United States. Mr. Griffin will also sell fresh iced fish. The building is a two-story affair and built on the side of a hill so that the second story is also a ground floor from which trucks may be loaded and unloaded without any additional work. Included in the plant will be bait facilities for inshore fishermen.

ANOTHER STEP FORWARD

IN THE EXPANDING ECONOMY
OF SOURIS
