The Imperial Wheel

For Ladies and Gentlemen, pronounced by cyclists to be one of the very best, which will be sold to introduce them as cheap as the ordinary makes. On exhibition at John Newson's Furniture Store. FRED. P. NEWSON.

DON'T FORGET

that the place to have your WATCH REPAIRED PROMPTLY and as it should be done is at W. N. TANTON'S, Late of the employ of W. W. Wellner, Great George Street, NEAR QUEEN SQUARE.

WE WISH

all our friends to know that we are still on CONNOLLY'S WHARF, and intend remaining there for this year at least. We would strongly advise our Country friends not to kill their horses after coming long journeys, by hauling Lumber over bare streets, when they can come to this Wharf and load their sleighs so conveniently right on the ice, which they cannot do anywhere else.

TENDERS.

Scaled Tenders will be received at the Episcopal Residence until noon on FRIDAY, the 17th day of April, A. D. 1896, from any person or persons willing to purchase the building now known as the Old St. Dunstan's Cathedral. Bidding to be removed within forty days from 1st day of May, A. D. 1896.

Bell their Agent for this Province, and in this connection he will keep all turnings required for the manufacture of Butter and Cheese—144 Seamless Bandage, Plaster Extract, Coloring, Brooms and Brushes, Dairy Thermometers, Dillon's Milk Book, e Cheese Companies will do well to place their orders at once for supplies required. Also, on hand, a number of Milk Cans and Vats, Presses, Card Mills, and all other goods furnished on application. JOHN D. BELL, Montague. April 10, 1896—dy & wy

Cold Treatment for Pneumonia.

The local application of cold is now common in pneumonia. Mortality ranging from 30 per cent. to nothing is recorded for various methods of treatment, while the natural recovery without treatment has been found to be about 90 per cent. Dr. Mays, of Philadelphia, reports that cases treated by cold, with 3.58 per cent. of deaths. It cannot be believed that any treatment invariably cures, and he regards this as by far the most satisfactory. The action of the cold consists in reducing the fever, strengthening the pulse, toning up the heart, diminishing the pain in the chest and alleviating the difficulty in breathing.

It Altered the Case.

In an Edinburgh school the other day an inspector, wishing to test the knowledge of a class in fractions, asked one boy whether he would rather take a sixth than a seventh part of an orange if he got his choice. The boy promptly replied that he would take the seventh. At this the inspector explained at length to the class that the boy who chooses the smaller part as this boy had done because it looked the larger fraction was very foolish; but the laugh was on the other side when the chirping voice of another urchin broke in in remonstrance, "Please, sir, but that boy disna like oranges!"

Remedy for Whooping-Cough.

An excellent remedy for whooping-cough is to pour boiling water on flax seed, steep it some time, strain, and to every pint of tea add enough granulated sugar or honey to make a thick syrup; after boiling them together a few minutes, put in the juice of two lemons. A few spoonfuls taken often at regular intervals will soon relieve the cough.

When Mars Was Inhabited.

There are many reasons in favor of the supposition that Mars is more likely to have been inhabited in past ages than at the present time in spite of its atmosphere, or water, or clouds. Mr. Proctor, for instance, has pointed out that a globe of the size of Mars would cool rather more than two and a half times as quickly as one the size of the earth. If the earth and Mars were in a similar condition 18,000,000 years ago, Mars would have attained, (according to that rate of cooling) to the earth's present condition in 7,000,000 years, i. e., 11,000,000 years ago; and the earth would now require 28,000,000 years in which to cool as much as Mars has cooled during the last 11,000,000 years. So far as the probability of the present habitability of Mars must be compared with the probability of the earth's being inhabited when 28,000,000 years will be past and gone.

Better Has a Moral Quality.

Better, as well as external conduct, has a moral quality. We are responsible for our beliefs just as we are for an overt action. Hence it matters greatly what a man believes, because if he entertains error it will inevitably color and modify his character and impart its own moral quality to his life. If he has the means of knowing the truth, and he is fully persuaded in his own mind, and then act according to his best judgment.

Outwitted the Footpad.

Dr. Brown, of St. Louis, was walking home late one night when he was accosted by a footpad. "Give me your money," said the thief. As quick as thought the doctor turned and in an off-handed tone said: "What are you doing over here? Go on the other side of the street. I'm working this side myself."

John's Forethought.

"John," said a wife who was supposed to be on her death bed, "in case of my death, I think it will be well to temperament and domestic nature, aside from the good of the children should marry again." "Do you think so, my dear?" "I certainly do, after a reasonable length of time." "Well, now, do you know my dear that I believe my mind of a great burden. The little widow Jenkins has acted rather demure toward me since you were taken sick. She is not the woman that you are, a strong-minded, intelligent woman of character, but she is plump and pretty, and I think would make me a desirable wife." The next day Mrs. John was able to sit up, the following day she went down stairs, and, on the third day, she was planning for a new dress.

Highest of all in Leavening Power.—Latest U. S. Gov't Report

Royal Baking Powder ABSOLUTELY PURE

Prohibition in Toronto. The City of Toronto is still under the license system with 150 licensed establishments in full blast, authorized and protected by law; but it has "prohibition in spots," and the results, even of such a partial measure as that, are of a significant character. On election days—municipal, provincial and Dominion—all licensed houses must be closed. On Monday, January 6, Toronto had a very exciting and hotly contested election for mayor and aldermen in all its wards for this year. There were all the elements for "a big time" in the way of drinking, shops to be legally opened barrooms, must be closed. On Monday, January 6, Toronto had a very exciting and hotly contested election for mayor and aldermen in all its wards for this year. There were all the elements for "a big time" in the way of drinking, shops to be legally opened barrooms, must be closed on that day. Next morning there were 41 cases of "drunks" before the same Police Court. Toronto has had a similar experience for years. The facts tell their own moral. And yet, some really intelligent people, some Toronto ministers included, go on thinking "Prohibition can't be enforced, and that under such a law there would be more drunkenness than

He Swallowed the Bullet.

"You didn't know it was loaded, did you, auntie?" said all that brave little Harry Quick said after he had spit out three teeth and swallowed the bullet. The gun was an old-fashioned one, a loading rifle. It had reposed amid cobwebs and dust in the garret for years. On Monday Mrs. Quick came down town shopping in the evening. Her husband, the day with his aunt. A young son of Mrs. Taylor, intending to bring to a close the lives of some rats which infested the backyard, and that morning carried the backyard, cleaned, loaded, cooked and placed it on his bed. Here Harry found it, and as the rifle was too heavy for him to lift, he climbed upon the bed and proceeded to examine the mechanism from that point of vantage. Mr. Taylor saw her nephew playing there, and although she "didn't think the gun was loaded," she made assurances doubly sure, picked it up and dropped the hammer. An explosion followed. Suffice it to say that the pace of the royal carriage in Carlyle's narrative became three miles per hour instead of six and a half, and that the carriage itself became a huge lumbering vehicle, whereas it was an ordinary pace, on an occasion, however, when the pace should have been unusual. Mr. Brown is thorough, almost merciless in his exposure of errors. He could not, indeed, be expected to pass over Carlyle's description of Droust as in his night-gown, instead of dressing-gown, as ludicrous a mistake as that with which Carlyle twitted a translator of "Faust," who made the faltering Margarete, ask her neighbor at church for her dram bottle in lieu of her smelling-bottle. But he might have been a little less severe on the town of Yverdone, being styled a paltry little village; on Droust being described as still in the prime of life, when he was only twenty-eight; on Couche's for conchoidal "Pout-de-Sommeville" for "Pout-Sommeville"—both forms seem to have been used; and on the presence of sunshine. This last correction is rather strained.—Westminster Review.

PERFUMING FLOWERS.

It has been found possible not only to take away from a flower its natural odor but to make it yield a perfume derived from some other flower. There are violets which are humble to look upon but which have a sweet fragrance, and there are handsome members of the violet family which are almost odorless. Modern science in Paris has accomplished the transfer of the perfume of one to the beauty of the other. The violet marigold which is a beautiful flower is disliked by many on account of its disagreeable odor. This odor has been removed also. A sunflower has been made to smell like a rose and a chrysanthemum like a violet. The machine for perfuming flowers is a box filled with ice. The flowers are simply laid in the box, into which lead pipes charged with carbonic acid gas laden with the desired perfume. This machine is most generally used in strengthening the natural fragrance of violets and roses. The intense perfume resultant will last many days. When it is necessary to rob a flower of its natural odor before giving it another it is soaked in water, and then washed. In the case of the African marigold the seeds were soaked in rose water and musk and then sown. The seeds of the flowers which were desired were then treated in the same way and finally marigolds were produced with a most delicious fragrance. If flowers are constantly watered with a dilution of musk the odor of musk will be imparted to the flowers. Trees can be treated in the same way by pouring a thick liquid containing the desired odor into a hole in the trunk. In Paris roses and violets sometimes have poured over them a solution of alcohol and perfume mingled with glycerine, which holds the perfume. The perfumes for flowers may be bought in packages from the Parisian druggists.

CONTAGION IN THE CUP.

How Transmission of Disease in the Communion Cup May be Avoided. The recent death of a cancer patient as the result of inoculation and the recognition that consumption is contagious has suggested the possibility of danger in the common use of one cup in the administration of the communion. It is known that many persons who are in a condition demands individual service, and there are some who are deprived of this blessing from a sense of justice to other communicants. It is a desirable question whether the church is exempt from the regulations of medical science in view of this transmission of disease made possible by a collective use of one cup. At any rate, the individual cup now largely used has met with considerable approval. To obviate this objection a communion syphon has been devised which retains the idea of unity and fellowship in the sending of the cup, and effectually prevents the transmission of the disease and has a cleanliness which makes it most attractive. It is intended for use in the most simple and unobtrusive manner. The wine can be freely drawn from the cup, but owing to its formation, not one drop touching the lips can return. It is easily cleaned and is not so liable to become soiled as the antique case is communicated. The cup is arranged in two parts, enclosed in a leather case of small dimensions, and convenient to carry.
