Skyscrapers Causing City Controversy

LONDON (Reuters) — Each new skyscraper constructed in London causes a stormy controversy about safeguarding the historic skyline of the capital. Whether architects or sales girls, lawyer or street cleaner, Londoners have strong opinions about the changing face of their capital. The age-old beauties of the metropolis are being meaning for the out-of-towner and foreign visitor.

Yet enthusiasts are bemoaning before the wind of commercial change and necessity. The latest and most striking change on the London skyline is a slender telephone exchange and television tower in the fashionable Whitehall area. The 578-foot tower is a landmark which is more than 200 feet higher than an earlier case of controversy, a 387-foot high office block near Westminster Abbey, ancient church of the British monarchs.

These heights may compare with New York City's Empire State building at 1,248 feet, for Paris 684-foot high Eiffel Tower but they are imposing enough to create arguments. Post office authorities have a good case for restoring to a skyscraper for their telephone and

TV tower since the alternative would have been to lay miles and miles of underground cables. This would have added to the cost and would have turned London's daily traffic congestion into chaos.

Companies obliged to pay because of the new tower are anxious to make the most of their expenditures by building as high as the planning authorities will allow.

Within the last couple of decades Parliament's famous tower, with the clock known to everyone as Big Ben standing 330 feet above Thames, has been rivaled by an office building two power stations, the 343-foot-high headquarters of an oil company on the South Bank, and at least two big hotels.

Chicoutimi Priest Denies Support Of Separatists

MONTREAL (CP) — Abbe Jean-Paul Tremblay, in letters to Montreal newspapers published last week, has denied that he approves or supports any Quebec separatist or revolutionary movements.

The Chicoutimi, Que., priest who is the founder of a youth group called Les Equippers de St. Michel, in an address at Quebec Jan. 18 was reported to have said the future of French Canada is affirmed by the dynamism, generosity and courage" of such men as Marcel Chaput, Frere Untel and Jacques Hebert.

He also was reported to have referred in his speech to young Quebecers serving prison terms in Montreal last year and to as a result of separatist violence have said.

"I salute their courage and I assure them that nothing is lost. On the contrary, it is assured." The priest in his letters to newspapers said.

"While the tribute was intended only as an expression of sympathy to people who were suffering, the presentation made of the words of the speaker and the quotations used left the impression that these acts had his full approval. This impression does not correspond in any way to reality."

IMPRESSION FALSE

The letters added that Abbe Tremblay would have appreciated if his speech had been reported for what was positive in it about the present problems of youth rather than the false impression left that he challenged the justice of his country or contests the decisions of civil and religious authorities.

Separatist leader Marcel Chaput to whom Abbe Tremblay referred, recently resigned from Le Parti Rencaisse du Quebec after a fan to raise funds for it.

Brother Jerome of the Marist Order who wrote under the name Frere Untel was sent abroad by his community for study after his book Les Implications of Brother So-and-so became a best seller. The book criticized Quebec's education system.

Jacques Hebert, a third person named by the priest Jan. 18, is a Montreal book publisher and author who late last year

produced the controversial volume 'Accuse les Assassins de Coffin (I Accuse Coffin's Assassins). A few weeks after the book appeared, the Quebec gov-

ernment appointed a royal commission to review the case of Wilber Coffin, Gaspe prospector hanged in 1936 after the slaying of three American hunters.

Mr. Fowler said the pulp and paper industry is moving further into the research field. Expansion of the industry's Pointe Claire research institute near Montreal, with government help, and the opening of a central research laboratory by Dominion Tar and Chemical Company in nearby Senneville were "major indications of the conviction that the industry's continued health must be, in part, determined by the application of science and engineering to its operations."

1963 Wood Pulp Production Set New Record In Canada

MONTREAL (CP) — Canada produced a record 12,200,000 tons of wood pulp in 1963, President R. M. Fowler of the Canadian Pulp and Paper Association has announced.

Mr. Fowler said in his annual report to the association that this figure represented one-sixth of world output last year and a three-per-cent increase over Canadian production in 1962.

Of the record Canadian production in 1963, about 9,600,000 tons were converted to paper and paperboard in domestic mills, the rest was shipped as pulp.

However, production of newsprint was down slightly from the previous year.

Mr. Fowler said this was mainly because of long strikes at a number of newspapers in the United States that cost Canadian mills sales of about 300,000 tons.

He said exports of chemical pulp increased markedly to 250,000 tons in 1963, reflecting "a pronounced rise in the demand for paper and paperboard, both in North America and abroad."

Some 1,500 delegates from across Canada are attending the annual meetings of the Canadian Pulp and Paper Association and its technical section in Montreal this week. The sessions end Friday.

Mr. Fowler said the Canadian pulp and paper industry exported about four-fifths of its total production in 1963, as usual, and these shipments amounted to almost one-fifth of all Canadian exports.

The U.S. and Britain continued to be the main customers but some other countries, notably Japan, had increased their imports of Canadian pulp and paper substantially.

The industry operated at 83 per cent of capacity in 1963, a slight change in this respect from 1962.

60 per cent of the downtown is badly decayed and has been recommended progressive re-land reconstruction. Mayor Armand Turpin has indicated most of the recommendations

Council members sometimes need discipline

And your daily paper makes a dandy club. That's what it's for, you know. Among other things.

Public officials, by and large, are dedicated men, capable, honest and hard-working, but sometimes they get complacent; they forget that they're in office to serve the public good; or they get the notion that the public purse is a bottomless well. Then, a good whack usually straightens them out.

Obviously, it isn't practical to take a swipe at a councilman every time you think he's up to something. And it would only get you into trouble. Besides, that's a job for your daily newspaper. Your news-

paper has had a lot of practice at guarding the public well. It is, in a very real sense, the eyes and ears of the public. When elected officials don't do their job or do their job badly, your daily newspaper is quick to report the facts of the matter. Informed public opinion does the rest. Freedom of the press, after all, is nothing more than freedom of the individual . . . your right to speak. For the press gives voice to the rights and privileges of the people. Where the press is controlled or silenced, so is individual freedom. But so long as the press can speak up for the people, the people will be free. It's a pretty good club to have.

HULL PLANS RENEWAL PROGRAM
