

Operating Losses Force Boston Post Suspension

BOSTON (AP) — The 125-year-old Boston Post ceased publication today "until further notice" because of continued operating losses.

At its end, the daily morning circulation was 225,000 and the Sunday circulation about 260,000. Announcement of the suspension—the third time the paper had discontinued operations in three months—was made by three trustees appointed by a federal court under the Bankruptcy Act.

Approximately 800 employees are affected.

STAFF PARTS

A silence that is strange in city rooms prevailed as more than a score of reporters, editors, desk men and others crowded around the bulletin board to read the news.

Then they returned to their desks to complete the work on hand before shaking hands all around and wishing each luck in the search for new jobs.

Most were pessimistic. The Post would publish again, although the trustees said they were hopeful that a purchaser for the paper will be found.

THIRD STOPPAGE

The Post first suspended publication on July 7 after then-publisher John Fox ran into financial difficulties, but it resumed publication the following day.

It suspended publication again Aug. 16 after negotiations for its sale fell through and Fox petitioned for reorganization under the Bankruptcy Act.

The trustees replaced Fox as publisher and resumed publication of the Post Aug. 24.

Fox purchased the paper in 1952 from the Richard Grozier estate for an estimated \$4,000,000. The estate later sued Fox on the claim that he was not meeting payments. Fox countered with a suit saying he had overpaid the estate by an estimated \$750,000. The suits still are pending.

NEWSY NOTES

By J. A. Clark, D.Sc.

QUEBEC FARMS

According to the Canadian Census of 1951, Quebec Province had 134,336 farms or almost 10,000 more than one fifth of the total farms in Canada. The average area of these farms was about 125 acres. The average value at that time was given as \$50.00 per acre, including land and buildings.

Quebec has a total area of 335,270,440 acres, of this only five per cent or 16,786,105 acres are tillable and some two and one half per cent, or 8,828,986 acres are improved land.

In driving through Quebec, we noted that except in the Eastern Townships and a few smaller areas, the farms are generally hilly and rocky, and that the possibility of increasing the acreage under cultivation in the near future is unlikely. At present farm production is not sufficient to meet local needs. Compared with South western Ontario, the winters are long and cold and the summers short. In some districts due to climate and soil conditions, legume crops that are high in protein are restricted so that dairying is handicapped and the average production of milk per cow in Quebec is approximately 5000 pounds per year. Large quantities of feed grains are imported to improve the ration for cattle.

LIVESTOCK

The total number of livestock on farms as given in the 1951 census was: Horses 232,863; cattle 1,640,000; sheep 316,000 and 10,000,000 chickens. Comparing these figures with the previous census of 1941, Quebec had 30 per cent less horses; 6.7 per cent less cattle; 37 per cent more sheep; 40 per cent less sheep and 25 per cent more chickens. This great increase in hogs and chickens, indicate that Quebec farmers had taken advantage of the favorable prices for these lines of livestock, induced by war conditions and increased their earnings greatly as shown by the net farm revenue from their farm operations which was \$337,578,000 in 1951 compared with their net farm revenue 20 years earlier in 1931 when it was only \$53,000,000 showing that they had increased it six fold during that period.

DAIRYING

The Province of Quebec produced milk to the value of \$150,300,000 in 1951 but fell far short of supplying her own domestic needs. The City of Montreal alone consumed 1,200,000 pounds of milk daily. Their ever-increasing population adds to their requirements and the need of developing dairying as a vital undertaking in their diversified agriculture. The majority of Quebec farmers are French speaking and deserve great credit for the founding and establishing of the First Dairy School on the North American continent at St. Denis, Kamouraska County in 1881, nine years before a second school was started in Wisconsin. They brought the first cream separator to America and installed it at Ste. Marie in Bruce County, Quebec.

FRENCH-CANADIAN BREEDS

The French Quebec farmers developed and acclimated the French Canadian cow, which proved to be quite superior in many ways in meeting conditions of climate and vegetation in the less favorable parts of the country. We recall meeting a herd many years ago, that was in such good condition, that we asked the boy driving them what breed they were? His proud answer was "De old breed", which we knew meant French Canadian. They also developed the heavy French Canadian horse, that has been very useful for conditions that exist on many of their farms. These two breeds have filled a need in Quebec that would not have been met by the introduction of other breeds of wether cattle or horses.

DECREASE OF HORSES

With the increase of mechanization on the farms of Quebec there has been tendency to increase the size of the farms. This trend has greatly decreased the number of horses which had dropped to 195,000 in 1955, a decrease of over 107,000 in fourteen years. Sheep which also had declined greatly between the two last census periods; came back gradually each year until in 1954 there were 363,000 sheep and lambs in the province, a gain in three years of 46,000.

IMPROVED OUTLOOK

The Department of Agriculture in the province of Quebec has greatly increased the assistance it

The Guardian, Page 1
Tuesday, Oct. 9, 1956

has given to farmers, particularly in the various fields of Extension Service. Twenty years ago the Department received an appropriation of four million dollars; in 1951 this had been increased to fourteen million dollars. There has been decided improvement in the pastures and hay crops in recent years. Livestock breeders are using larger quantities of commercial concentrates. The cost of production is higher but there has also been an improvement in marketing conditions. The large industrial concerns provide a home market for farm produce.

ANCIENT CITY
Bogota, capital of Colombia in South America, was founded in 1538.

Don't Fight The Doctor

If your doctor keeps you waiting a few minutes you've no right to retaliate. How a grumpy old fellow tried to get even with his physician for a short delay is the subject of another laughable story by that great yarn-spinner Gregory Clark in The Standard this week. A good story with a happy ending. You'll like it. Get The Standard—on sale now, complete with magazine, 12-page novel and 20 pages of comics. Only ten cents.

BEDTIME STORIES

Rusty Is Too Slow

Be not too quick, yet not too slow. 'Twill pay you thus where'er you go.

—Old Mother Nature.

Of the Squirrel Cousins who live in the Green Forest, Rusty the Fox Squirrel is the biggest. Because he is so much bigger than the others, he is much slower. He cannot get around quite as fast as his cousin Happy Jack the Gray Squirrel. He isn't quite as much at home in trees as Happy Jack. So when the harvest time comes with nuts and acorns to be gathered and stored away, Happy Jack has the advantage because he is the quickest.

"If Rusty doesn't move a little faster, he won't get his share," said Peter Rabbit, who was looking on.

Jack Frost was coming almost every night now. Every morning there were more nuts on the ground for Jack Frost had opened the jackets and the nuts had fallen out. Now of course in the Green Forest as in most places, first comes is first served, and usually best served. Happy Jack was out of bed and on his way to the big hickory tree with the first bit of light in the morning. Once there he wasted no time.

Chatterer the Red Squirrel was up just as early. But Chatterer had not yet come over for his share of the hickory nuts. He has a liking for the seeds of a pine tree and he was busy cutting the pine cones from the branches where they grew. Chatterer is smart. If he waited until the cones opened to let the seeds fall, they

would be so scattered it would be hard work to find them. So he was hurrying to cut the cones and drop them to the ground before they should be opened by Old Mother Nature. It would be easy then to make a great pile of the cones and when they did open, or were opened by him, he wouldn't have to hunt for seeds under the leaves. Rusty likes his morning sleep. It is hard work for him to get up in the morning, as early as his cousins do. So by the time he started over to the hickory tree it was broad daylight. Happy Jack already had a great many of those nuts picked up, carried away and hidden. Rusty went to work at once, but he was slow. By the time he had found a nut, carried it off and hidden it, Happy Jack would have taken two nuts, buried them and returned for another.

When all the nuts on the ground had been gathered both Happy Jack and Rusty climbed the tree to get the nuts that had not yet fallen. Happy Jack was working hard and fast. It seemed as if he was quite reckless in the way he jumped from branch to branch and climbed out on the slender limbs to get the nuts. He was wasting no time. Rusty was so much slower, and at the same time so careful because of his awkwardness, that Happy Jack was getting so many more of those precious hickory nuts. Rusty felt it wasn't fair. Of course it was fair. It is always fair for those who are quick to beat those who are slow. However, it sometimes happens that those who are slow do better work than those who are quicker.

"If Rusty doesn't move a little faster, he won't get his share," said Peter Rabbit, who was looking on.

"Don't worry," said Sammy Jay. "He won't go hungry. There are so many nuts this fall that even the laziest Squirrel, and the slowest Squirrel, will get plenty to last him all winter."

SKIN ITCH

To quickly clear your skin of embarrassing, irritating, itchy, redness, Eczema, Rash, Pimples, Itching, Cracking, Peeling Skin or Foot Itch get new scientific, anti-septic, healing, germ killing NIXODERM tonight, for a clearer, softer, smoother skin tomorrow.
