

THE DAILY EXAMINER.

SEPTEMBER 20, 1888.

Senator Sherman's Speech.

OUT of the babel of threats and taunts and bluster and humbug at Washington, has come the strong voice of Senator Sherman, crying "peace." It is pleasing to hear, amidst the confusion, this single note.

We have no doubt that it is in accord with the thoughtful and Christian element in the States. The pity is that that element is, apparently, so very small.

It is kind of Senator Sherman to wish that Canada should share in the "prosperity and blessings of the American Union."

The much-abused Canadians well know how to appreciate the Senator's sympathy. Unfortunately, the leading men of the States have not been influenced by such statesmanlike views and noble sentiments as those to which he has given utterance.

It may be urged that the politicians of the United States would accord us different treatment if Canada and the States were politically united.

On the whole, the people of Canada would like to deal in a fair, free and friendly way with the people of the States. But they prefer to remain politically independent under the flag of Great Britain.

The selection of Mr. R. S. White to represent the constituency of Cardwell, is a matter for congratulation in the Upper Provinces, where Mr. White is personally known.

An encyclical letter from the Pope recommends that a requiem mass be held on the last Sunday in September in commemoration of the 50th anniversary of His Holiness' ordination to the priesthood.

The story comes from Los Angeles of the burning of a young squaw by Mojave Indians because she was accused of practising witchcraft.

The total salmon pack in Alaska is 7,000 cases. The winter is setting in at Silver Bow basin and mining operations have been suspended.

Mr. Ruskin dislikes foreign translators, and not long ago wrote a letter telling a man who asked permission to translate his works to let them alone.

Mr. Graham, agent of the Canadian Government in Scotland, is visiting Stornoway and neighboring islands, under Sir Charles Tupper's directions.

The tidings of the murder of Stanley's Chief Lieutenant, Major Bartlett, created a great sensation in London.

As I intend leaving the Island for the winter, and going to the far West, where we intend making our future home, we will offer a large and well-assorted stock of Crockery at a great reduction.

Sir John on Retaliation.

THE PREMIER TELLS THE AMERICAN CORRESPONDENT SOME WHOLESOME TRUTHS—CANADA WILL YIELD NO MORE POINTS TO THE UNITED STATES—THE GOVERNMENT WILL WAIT QUIETLY FOR THE NEXT MOVE.

The New York Sun of the 16th prints the following:—

"OTTAWA, Sept. 15.—I had a talk to-day with the Prime Minister of Canada, Sir John Macdonald, G. C. B. He has been in office almost forty-seven years, and is closely allied by many ties with the British Government, and is as absolutely the ruler of Canada as any man can be under the English constitutional system.

"There is no truth in the widely published statement that the English Government peremptorily ordered the Canadian Executive to maintain strict silence when the fishery question came up, or that Canada was debarred from acting at present.

"While the whole matter rests in the hands of Great Britain, I am well aware," continued Sir John, "that such statements have been made and that they have gained general credence, but the sober facts are that the Canadian Government has full right and power to act in this matter itself, and that it will do so without reference to the Mother Country."

"The policy of the Government," "May I ask," I said, "what the policy of the Government will be?"

"I had no idea that Sir John would answer the question, and he sat for some moments looking intently at the blotter on his desk, then he said quickly:

"The policy of the Canadian Government will be to await developments in the United States. By this I mean that the only question from which trouble can arise relates to the fishing. The fishing season has just closed and it will not open again till May.

"In other words, it will be fully eight months before the United States will have any chance to bring up that question again. Until that time we will do absolutely nothing unless President Cleveland makes some unexpected move, which is not probable, even if the Senate should grant him the asked-for power.

"The feeling toward the United States," continued Sir John, "is not unfriendly, but it is to be remembered that we have given much to the States, one thing after another, under the several treaties. We do not feel that this can go on forever.

"The feeling toward the United States," continued Sir John, "is not unfriendly, but it is to be remembered that we have given much to the States, one thing after another, under the several treaties. We do not feel that this can go on forever.

"The effect of retaliation," "What would the effect on Canada be if the retaliation measures were fully carried out?"

"The Grand Trunk railway will suffer to a certain extent, because its eastern terminus is in Portland and its western terminus in Chicago, but many of the other roads may be built up by the increase of trade diverted to them.

"The number of women who are engaged upon some specific employment in Great Britain and the United States is remarkable and is annually increasing.

"A young lady named Miss McDonald, of Durham, Ont., an only and orphan child, with considerable property coming to her at an early date, was to have been married to Edward Bryan, a worthy swain of Varnley.

"FAMILIES wanting a supply of fall boots would do well to leave their orders with us and we will select them carefully and guarantee satisfaction."—Goff Bros., successors to Doney, Bell & Co.

Technical Education.

Lord Armstrong, the inventor of the Armstrong gun, the head of the great iron working firm of Armstrong & Company, and, therefore, one of the marshals of England's industrial army, has in a recent article in the Nineteenth Century on technical education, done a good deal to remove the charge of vagueness which he himself brings against the advocates of this new departure.

"A man's success in life depends incomparably more upon his capacity for useful action than upon his acquirements in knowledge," and, therefore, in Lord Armstrong's opinion, the primary schools should teach reading, writing, drawing and arithmetic, which are all means to an end; they should endeavor to train and develop the hand, the eye, the ear, the memory and the powers of judging; and the physical well-being of the child should be as dear to the teacher and as much regarded by the system as the mental.
