PUBLIC AUCTION

As I have sold my farm by private sale, I shall on,

THURSDAY AUGUST 26th,

at 10 o'clock a. m. sell by auction, my stock and farming implements, consisting of two well bred mares, one eight years old, and one four year old. Also two milch cows; one two year old, and the other four year old, also three heifers rising two year with calf, also three calves, also ten sheep, fat, ready for the butcher.

Farming implements—Two carts, two wood-sleighs, two good ploughs of the old Scotch style, one principally new, one pair of good spring tooth harrows, one set of pin harrows, one scuffer, and one moulding plough. One jaunty sleigh of an excellent quality never have been used, and buffalo; one wagon and harness, also cart harness, and many other articles too numerous to mention.

the best laundry Soap on the market. One bar will do as much as two bars of ordinary imported Soap made from filthy material.

CHTJWA S OAP WORKS

JERSEY WORTH HAVING.

Yield of Six Per Cent Butter Fat and a Big Calf.

Here is a famous old Jersey cow, imported originally from the island which is the native home of Jerseys. She has never been forced for a record, but has been one of the best cows straight through her career ever owned in private life. When she was 18 years old, her milk yielded 6 per cent butter fat to the test.

A writer in The Rural New Yorker, from which paper the illustration is reproduced, says of the old herd mother:

This photograph was taken when her calf was about 8 weeks old, and the cow was not looking as well as usual, having fallen away somewhat in flesh after giving

EIGHTEEN YEARS OLD.

birth to her calf, which was a very large, vigorous young fellow. At this time the mother was giving on an average about 25 pounds of milk daily, testing 6 per cent butter fat. Although very nearly 18 years old at that time, she is a valuable dairy cow even yet. The next time a man tells you that he is afraid to feed his cows heavily because he thinks that they will last only a short time under this treatment just call his attention to old Cypres, who has stood heavy feeding for nearly 19 years, and today her udder and teats are in as perfect condition as when she was a heifer. As long as you are able to milk it out don't be afraid to put the feed into a dairy cow.

Why Calves and Other Calves.

For a number of years we raised 10 to 25 calves every year. We sold our milk to the cheese factory and had our whey back. This problem of raising good calves on whey was a serious one. We always started our calves on new milk till they were 3 or 4 weeks old, then gradually diminished the milk and added a little whey, and at the end of a week the whey would be substituted for the milk and no bad results from the change, as is often the case when the change is made abruptly. But to make up for the loss of the milk we boiled a kettleful of old process oilmeal, adding a little of this to each feed.

They would thrive nicely on this till hot weather came on, when the whey would get too sour for calves.

This dilemma confronted us several times. At last we decided the whey must go, and we adopted a new system, which proved a success. We made hay tea by taking an old washboiler and crowding it full of sweet clover hay, then pouring boiling water over it and covering up to steep. When the new milk was taken away from them, at the age of 3 or 4 weeks, a little of this tea and also a little of the cooked oilmeal was given each calf. By thinning with water the desired amount of drink was obtained. This was increased as they got older, and also a little bran added.

At the start the quantity of oilmeal to be used is at the rate of two table-spoonfuls to each calf. At the age of 3 months the hay tea may be omitted, as the calves will then be old enough to eat plenty of grass, but they should be on good pasture.

The cooked oilmeal and bran should be given them all summer by thinning it as a drink with water. It should be measured, not guessed at, and each one fed in a pail separately. We wish to emphasize the word "cooked," for if fed in its raw state it is liable to scour the calves, while if cooked it will not, hence very important. This hay after being steeped is not altogether wasted, for horses and cattle will eat it more greedily than in its dry state, though it is true much of its strength is exhausted.—Exchange.

Question and Answer.

If I skim with separator a pound of cream from each 6 pounds of milk that tested 4 per cent butter fat, what per cent of fat should the cream show in Babcock test? Why should it not show six times 4 per cent, or 24 per cent?

Answer.—It should, barring the inevitable loss, and this is frequently larger than is supposed. A separator needs constant watching, just like any other high speeded machine. The loss in the skim-milk ought not to exceed one-tenth of 1 per cent, but is quite frequently more than twice that. In the case cited, if the skim-milk contained two-tenths of 1 per cent fat, the cream would not test quite 28 per cent.—Hoard's Dairyman.

McGill University, Montreal SESSION 1897-98

The curriculum comprises course in ARTS, (including the DONALD SPECIAL COURSE FOR WOMEN), APPLIED SCIENCE, MEDICINE, LAW, and VETERINARY SCIENCE. Matriculation, Examination and Scholarship Examination will be held—ARTS and MEDICINE, 15th SEPT.; APPLIED SCIENCE, 16th SEPT.; LAW, 7th SEPT. VETERINARY SCIENCE, 22nd SEPT.

Copies of the Calendar containing information, may be obtained on application to the Secretary.

PRIMITIVE MAN.

He May Have Been Evolved Upon the American Continent.

In the Connecticut river valley reptiles left their tracks on the mud flats—since turned to sandstone—and a few skeletons also have been found. The bodies of a race of great reptiles that were the lords of creation of their day have been dissipated to their elements, while the chance indentations of their feet as they raced along the shores, mere footprints on the sands, have been preserved among the most imperishable of the memory tablets of the world.

Of the other vertebrate fossils that have been found in the eastern portions of America, among the most abundant and interesting are the skeletons of mastodons. Of these one of the largest and most complete is that which was unearthed in the bed of a drained lake near Newburg, N. Y., in 1845. This specimen was larger than the existing elephants, and had tusks 11 feet in length. It was mounted and described by Dr. John C. Warren of Boston, and has been famous for half a century as the "Warren mastodon."

But to the student of racial development as recorded by the fossils all these sporadic finds have but incidental interest as compared with the rich western fossil beds to which we have already referred. From records here unearthed the racial evolution of many mammals has in the past few years been made out in greater or less detail. Professor Cope has traced the ancestry of the camels (which, like the rhinoceroses, hippopotamuses and sundry other forms now spoken of as "old world," seem to have had their origin here) with such completeness.

A lemuroid form of mammal, believed to be of the type from which man has descended, has also been found in these beds. It is thought that the descendants of this creature and of the other "old world" forms above referred to found their way to Asia probably, as suggested by Professor Marsh, across a bridge at Bering strait, to continue their evolution on the other hemisphere, becoming extinct in the land of their nativity. The ape man found fossil in the tertiary strata of the island of Java two years ago by the Dutch surgeon, Dr. Eugene Dubois, and named Pithecanthropus erectus, may have been a direct descendant of the American tribe of primitive lemurs, though this is only a conjecture.—Henry Smith Williams, M. D., in Harper's Magazine.

Agent.

WHAT WOMEN WEAR.

Among the popular belt buckles are those of oxidized silver with jewels.

Veils to be fashionable must be plain, the simple length of soft Brussels net being one of the most approved.

A corn colored hat with black lace trimming is pretty, also the same colored hat with a very full wreath of blue corn flowers.

Skirts are very full at the back and are gathered over cords and drawn closely, so that the back shows a pointed design of one cord above another.

Artificial flowers are extravagantly beautiful. They are exceedingly natural and very rich looking, and if one buys good ones they last a long time.

Novelty hats are shown in braids of every imaginable color. Red is exceedingly popular and when trimmed with a profusion of soft black lace or chiffon is one of the most stylish of the milliner's creations.

The surplice front is gaining in favor, and when carefully adjusted is becoming to almost all figures. For stout ladies it seems to reduce the bulk, while for slender ones it can be left slightly loose and is very pretty and graceful.

The decline of the shoulder cape is said to be assured. How true this may be one can scarcely state authoritatively, but from all appearances this form of garment is too useful and has made too many friends to be given up very soon.

Soft belts of silk or velvet are used, and to these some of the rich buckles are fastened. One of the novelties is a belt of yellow velvet with three very elegant cut jet buckles, one in front and one on either side. At the back there is a large rosette bow of leather.

From EDWARD FISHER

Musical Director
Toronto Conservatory of Music.

The Bell Organ & Piano Co., Ltd.

Dear Sir,—Allow me to compliment you on the qualities of the Piano ordered from you for the Toronto Conservatory of Music. The tone is remarkably pure and brilliant throughout, while the bass is deep and powerful. The mechanism is apparently perfect, the touch elastic, and in appearance the entire Piano is a work of art.

Yours truly,

(Signed) EDWARD FISHER

Musical Director Toronto Conservatory of Music
