

# Ice cream no longer nutritious

Washington(CPS-CUP)

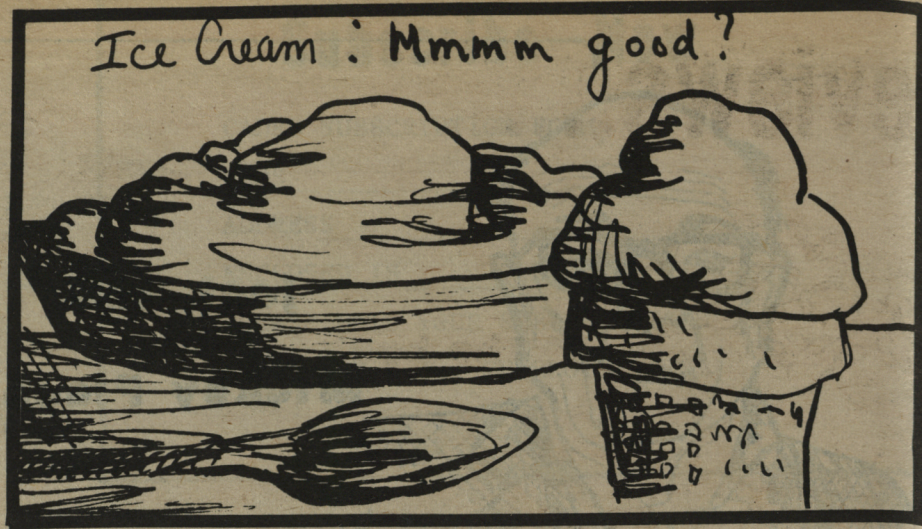

Ice cream used to be one of the most nutritious foods you could buy. Today, however, that icy treat is more likely to be artificially flavored, coloured and preserved with chemicals of dubious origin.

For example, if you like vanilla, the chances are good that the vanilla extract has been replaced by "piperonal". Piperonal, a benzene derivative, is a strong smelling substance commonly used by exterminators in the control of lice.

Another common substitute found in ice cream is benzyl acetate, used as a substitute for real strawberries. Benzyl acetate is also employed by the motion picture industry as one ingredient in the cement used to splice film.

"Pineapple" these days is more apt to be ethyl acetate, a cleaner used on leather and textiles.

Instead of eggs, ice cream factories emulsify the batter with diethyl glucol. This same material turns up in anti-freeze and various brands

of paint remover.'

These chemicals are used

because they are cheaper and prolong the self life of ice cream products.

# THE BIG ONE

## Big taste, big satisfaction

### EXPORT "A" THE BIG ONE

Canada's most popular cigarette.

## Carnival cafeteria combat

This year's Carnival had three new and exciting events. These events were held Saturday night at supertime in the Cafeteria.

The first event consisted of chicken, potatoes, vegetables, deserts, salt shakers and glass throwing. The winners of this event were those who managed to hit the most people with one of the above and who managed through great stamina to throw the most objects and make the most mess.

The second event followed shortly after the first one. This event was the tray dropping and dumping contest. The rules of this contest were as follows: to upset your tray on someone else's coat and see how much food could be spilt on it. The second rule was to drop the tray and count the number of glasses and dishes which broke. Participants in this event, as well as in the first event were very very eager to carry out the rules of the contest.

The third and final event was trying to stand up and walk out of the cafeteria without slipping. This indeed is a difficult feat because chicken, vegetables, beer, mash potatoes and spilt milk make the floor as slippery as ice.

The over all winners in these three events were those children who participated and made these events possible. Without them this article would not have been possible.
