SPENCER'S

OPHTHALMOSCOPIC TEST LENSES

Will Detect All Visual Defects.

A scientific and practical instrument for detecting all optical defects of the eye, and determining the lenses needed for their correction. As we use this instrument in adjusting Spectacles and Eye Glasses, we can guarantee satisfaction to our customers in all cases of

MYOPIA, or Near Sight,

HYPEROPIA, or Far Sight,

PRESBYOPIA, or Old Sight, and

ASTIGMATISM, or Poor Sight.

Caused by oval eyes, which causes some figures on a clock dial at fifteen feet to look darker than others.

This instrument measures each eye separately. A method which all oculists agree is the proper one.

Persons who have had difficulty in obtaining Spectacles to suit them are cordially invited to call and acquaint themselves with the merits of this instrument.

SPECTACLES and EYE GLASSES always in stock of the several grades, in frames of Steel, Rubber, Nickel, Celluloid, Silver, Gold, and Spectacles and Eye Glasses other than regular goods mounted to order.

Oculists' Prescriptions carefully filled.

E. W. TAYLOR,

JEWELER and OPTICIAN.

Great Mackenzie District.

DR. DAWSON'S EVIDENCE.

The evidence of Dr. Dawson, of the Geological Survey, was taken on the 25th ult., before the Schultz Committee. It was very elaborate. Dr. Dawson furnished important information regarding the Arctic sea coast east and west of the mouth of the Mackenzie river. He gave the number of vessels, principally from San Francisco, which were employed in the whaling and sealing catch of that region, and showed that the amount of whale and seal oil, of ivory and walrusbone was very great indeed. He expressed it as his opinion that suitable steamers could always be expected to reach the mouth of the Mackenzie through Behring's straits, and if the estuary of the Mackenzie possessed a channel deep enough they could ascend the river 1,200 or 1,300 miles, and have also the additional navigation of the coast line of Great Slave Lake, or about 1,000 miles more. He showed on a map the limits of the northern ice pack, taken from the coast pilot of the northern coast of Alaska, and showed a considerable line of open water between the southern limits of the coast pack and the Arctic coast as far east as Alaska extended. He thought it probable that the short distance between that and the mouth of the Mackenzie was equally open. He quoted various Arctic voyagers, who gave the temperature of the water off the mouth of the Mackenzie as being many degrees warmer than the adjacent waters of the region. He stated the multifarious district of British North America on the west coast, including the upper waters of the Liard river and the Peace river, to be at least 1,300 miles long and to average about 500 miles broad, and this area was greater than the multifarious district of the whole of the United States. He gave interesting accounts of the navigability of the Liard and Peace rivers west of the Rocky Mountains and stated that on the plateau or comparatively level country of the upper waters of the Yukon, and the upper waters of the Liard there existed a fine pastoral area of great extent, upon which the growth of the hardy cereals could always be depended on. He stated that the district in the valley of the D'Wina river, in Northern Russia, which empties into the White Sea at Archangel, latitude 65 degrees, supported a large population, and that the Mackenzie river district seemed quite as good in every respect, and if it should be found that shipments could be made through the mouth of the Mackenzie, as they are made from the mouth of the D'Wina, it would become a most valuable country. He gave interesting records of the grain-growing districts in the extreme northern districts of China, and stated that the question of the possible raising of grain was determined there more by the length of daylight during the three growing months of summer than by any question of latitude or temperature.

Good Reading.

There is no matter of such importance to young men as the early acquirement of the taste for good reading. Sir John Herschell says: "If I were to pray for a taste which should stand me in stead under every variety of circumstances, and be a source of happiness and cheerfulness to me through life, and a shield against its ills, however things might go amiss and the world frown upon me, it would be a taste for reading. Give a man this taste and the means of gratifying it, and you can hardly fail of making a happy man. You place him in contact with the best society in every period of history, with the wisest, the wittiest, the tenderest, the bravest, and the purest characters who have adorned humanity. You make him a denizen of all nations, a contemporary of all ages. The world has been created for him. The unread and unreading man is a poor witless being, whose conversation (if such it may be called) is but feeble small-talk about himself, his business, his ailments, and his neighbors; and if by chance he finds himself in the society of men of culture, he is uncessarily conscious of his inferiority, and wishes himself back in the congenial circle whose horizon is bounded by chat-and-gossip. On the other hand, he who has read much, and has well digested what he has read, has within his own mind inexhaustible springs of enjoyment, and is moreover a pleasant companion and a welcome guest among intelligent and thoughtful men. Desultory habits of study are not to be commended; but it is not advisable to pursue any systematic course of reading, as it is to be looked upon as a recreation rather than as an exercise; and if it were reduced to a rigid and regular system, it should become a wearisome task. Read all the good books that you can come across and have time to devote to with neglecting other duties; your life will certainly not last long enough to leave you time for the trumpery ones. But when you read for amusement and relaxation, choose something that interests and diverts you; it will go hard with you if you do not at the same time reap sterling profit from your reading.

Monkeys and the Telegraph.

A formidable antagonist to telegraph extension in Mexico is found in the monkey tribe which inhabits the jungles and chaparral of Tabasco. Literally, the woods are full of them. Their favorite diversion, when not in quest of food, is to betake themselves to the telegraph-line for gymnastic exercises; and linemen assert that often one hundred able-bodied monkeys may be seen swinging on the wire, feecooned monkey-fashion, by looping their tails. The continuous vibration caused by these forest gymnasts starts the iron nails used on the cross-arms, and these often come down, bringing the wire with them. And it is not a safe matter to undertake to disperse these robust monkeys who do such damage to the telegraph lines in the sparsely-inhabited state of Tabasco. Linemen have found that on shooting a monkey swinging on the wire they have been pursued by a whole regiment of monkeys. "It is no joke," said a lineman recently, "to have a tribe of monkeys pursue one; they are very strong, and can hit with a stone or a stick in a fashion to make a man howl with pain—a thing the monkeys enjoy hugely."

ADVICE TO MOTHERS.

—Mrs. Winslow's Soothing Syrup should always be used when children are cutting teeth. It relieves the little sufferer at once; it produces natural quiet sleep by relieving the child from pain; and the little cherub awakes as "bright as a button." It is very pleasant to taste. It soothes the child, softens the gums, allays all pain, relieves wind, regulates the bowels, and is the best known remedy for diarrhoea, whether arising from teething or other causes. Twenty-five cents a bottle. Be sure and ask for Mrs. Winslow's Soothing Syrup, and take no other kind mar 8 eod w ap 24

TEMPERANCE LECTURE.

—Mr. Charles Weeks, of Keene, New Hampshire, lectured in Souris Courthouse on Monday evening last to a large and appreciative audience. Mr. Weeks is a forcible and effective speaker on the subject of temperance. At the close of his address a vote of thanks was unanimously tendered him, to which he made a suitable and felicitous reply.
