## A CLOTHING SURPRISE.

The latter part of last week we were busy opening our Fall Clothing, and elegant clothing it is. The largest and best stock we have ever opened. We would like to describe it here in detail, but that would fill the paper, so for the present we will call your attention to some lines of

### MEN'S DOUBLE BREASTED SUITS

25 extra heavy all wool d. b. suits at \$7 00. 50 extra heavy all wool d. b. suits, very fine trimmings, and best of work—makes a beautiful fall suit, at \$9.50. 25 Black Cheviot, silk faced, d. b., as good as custom made, we will sell this at \$12.50.

We certainly have the finest stock of clothing ever imported to Charlottetown. We guarantee to give you what you want at as low a figure as can be bought in Canada.

## McKAY WOOLEN COMPANY.

and so we should be when we have such an artistic cutter as MR. J. J. McDONALD. When you want Good Clothes order from us.

**McKay Woolen Co.,**

High Grade Tailors.

#### THE LOBSTER TANK.

An Aquarium Exhibit That Many View With Lively Interest.

There are few tanks at the aquarium more interesting than that containing the lobsters. The lobsters there now are not great, like some of the monsters that have been exhibited, but they are lively and in good condition, and the display of their characteristics as they move about or pause to eat is almost startling to one unfamiliar with the lobster in life.

Whoever has picked up a live lobster in a market and found the big claws drooping, as they will if the lobster hasn't much life left in him, is sure to be interested when he sees the lobster here walking off briskly on his slender legs, carrying his big claws in front of him clear of the ground and his heavy tail clear likewise. His ordinary manner of progression is forward, and when he turns he swings his heavily weighted projecting ends with facility, but if he meets an obstruction or an enemy his usual way is to dart backward and perhaps diagonally upward through the water, which the lobster can do with great suddenness.

The lobster's feeding apparatus is wonderful. About the mouth there are lots of little attachments, all the time in motion when the lobster is feeding, which slice the food off in little shreds as the lobster holds it up to his mouth. If another lobster should come up, this lobster would know it, even though the other came up behind or at the side, and would turn to defend himself or to fight or to flee or to warn the other away.

The lobster's long feelers he can project one in one direction and the other in another, and with these, as he moves forward, back or sidewise, he guards against danger.

There are perhaps a dozen lobsters in the tank. In the center of the tank there is a little rock. There is likely to be seen upon this rock a little lobster, not a dull, old lobster lying down, but an alert young lobster standing up and supporting easily his big claws and his powerful tail—a young lobster ready to eat, to fight or to run away.—New York Sun.

#### ASK YOUR GROCER FOR Royal Oak Soap

the best laundry Soap on the market. One bar will do as much as two bars of ordinary imported Soap made from filthy material.

CHTOWN SOAP WORKS

#### HER ONLY FAULT.

As I went to my bachelor chamber one night And reflected on life as I put out the light I resolved that the clubs I would visit no more, But devote my affections to dear Lodore.

She is faultless in figure and lovely in face, Every movement the very perfection of grace— So confiding and gentle, congenial and sweet That the stoics and cynics are all at her feet.

Like the wings of the humming bird over the keys

Fly her tapering fingers in Liszt's potpourris; She excels on the harp and the Spanish guitar, And her voice is soprano that reaches to fa.

She is witty and brilliant in quick repartees, And she sings cavatinas with marvellous E's, Conversation in German and French can sustain, And has traveled in Italy, Egypt and Spain.

All the tender emotions so scented before Were aroused in my heart for the fair Lodore, But my growing affections are nipped in the bud.

For she will drag her skirts through the streets in the mud!

—W. H. Morris in New York Ledger.

#### A WONDERFUL POND.

Human Eyes Are Often Inhabited by Large Numbers of Living Creatures.

The water contained in a well developed, well formed eye in which the sight is not impaired, more especially where a person is farsighted, presents many curious phenomena. Looking through an open window in daylight upon a hazy atmosphere or upon a fog such as is seen in any city, or looking to the north upon a gray atmosphere, one will see, if conditions are as above, strange disks flitting and jumping about in the eye water. It has been my privilege to watch these organisms for several years, flitting about in the eye water, jumping toward each other again in strife and combat, in the which the water would become comparatively clear of amoebiform organisms, only to be again full of micrococci and the combats as above.

The various shapes of these animalcules are surprising. Some are attenuated, with fine filaments. Again, others are like wee bits of fine porcelain, with little projections, reminding one of turtles hopping about. Again, others present the appearance of cyclops and daphne.

How these organisms get into the eye water is a mystery—perhaps in the water we drink or foods we eat, either or both. The fact that the eye water is inhabited, like all other bodies of water, is a truth that can be proved positively, beyond peradventure, by any oculist when he may extract a diseased eye and place the fluid under the glass.

May not the accumulation of these organisms in the eye water, their rapid growth and the survival of the fittest or strongest be the cause of much blindness, wherein may be casts, coagulation of the eye water, so called paralysis of the optic nerve, cataracts and other forms of disease?

May not numerous headaches and other pains be caused by the overaccumulation or growth of these minute organisms, in which they stop the circulation of the active principle of life in the arterial circulation or the nervous forces? The same organisms are seen when looking upon drawing paper.—William W. Goodrich in New York Herald

**\$18,000--IN CASH--\$18,000**

### GRAND PROVINCIAL EXHIBITION

Halifax, September 28th, to October 1st, 1897.
