

DESIGN CH-804 HOUSE-1450 SQ.FT. GARAGE-240 SQ.FT.

This design has some interesting features. Note the split level entrance at the rear. This allows for convenient access to the basement, garage, and the extra washroom. The kitchen being at a slightly higher level is protected from cold air when the back door is opened. Front door is protected by the wide verandah.

There is an extra large bathroom with vanity and a spacious hall giving access to all bedrooms. These are all nicely isolated from the living kitchen, dining area. Design is for brick veneer with wood accents, but instructions for building in all frame are given with blueprints 1450 Sq. Ft.

First Aid For Ailing Houses

By ROGER C. WHITMAN
CLEAN BRICK
QUESTION: My daughter's house in suburban Detroit has various shades of paint in various layers including black, white, blue and red. She would like just the color of the original bricks to show. What is the handiest, easiest way to clean the paint off?
ANSWER: Get a building cleaning contractor to sandblast. (Remember, you said the handiest, not the cheapest way.) This also happens to be by far the best way. Any other method by hand, using a sander, paint remover, heat lamp, etc., is so difficult and tedious it's not worth the effort.

REMOVING VARNISH
QUESTION: Please tell me how to remove varnish from sanded redwood. This was first varnished two years ago framing a summer house door and has been varnished every year since. A steel brush merely removes the loose varnish.
ANSWER: On this vertical surface, liberally spread paste-type paint remover, and leave it on for an hour or two — long enough to soften the finish. Then you'll find the steel brush will really get results. It may be necessary to repeat, as only the top few layers may come off the first time.
CLEANING CAKED BRUSH
QUESTION: By diligent soaking in turpentine, I have managed to free the lower parts of the bristles on a badly paint-caked brush. But up near the top the paint is still a hard mass. Is there anything else to try?
ANSWER: There are many good brush-cleaning preparations available at paint and hardware stores, as well as variety stores. They work very well.

CEMENT OZZES UP BLACK
QUESTION: I put down the vinyl tiles myself in our basement playroom. Now I've noticed in a few places that the black cement has oozed up between the tiles, and I've had absolutely no luck in removing it. Can you help?
ANSWER: This is one of the most difficult removal jobs. Often the only answer is to take up the tiles, and relay them, using less cement. It's the over-enthusiasm which causes the excess to be forced up between the cracks (between). But before such a drastic step, try these remedies first: (1) a tile-cement cleaning compound; if he doesn't carry it, your hardware dealer can send for it. (2) gently rub with fine steel wool and turpentine. Be gentle, to avoid dulling the tile's sleek surface. When laying tile, use a special spreader for the adhesive — a foot-long blade with teeth — which distributes the cement evenly. Later, if by any unlucky chance you see cement oozing up, wipe it off immediately. It's far more difficult to remove once it has dried (as you have found out).
PAINTING PLASTER WALLS
QUESTION: Is it necessary to use sizing on my new plaster walls before painting them? This is a new house, and by now I'm sure the plaster has dried out sufficiently for painting.
ANSWER: Depends on the type of paint. If an oil-base paint, a coat of primer is necessary.

REFURBISH OLD FRIGATE
KINGSTON, Ont. (CP)—The "HMS Arrian, a Second World War frigate purchased in April by the Kingston Mariners Association, will be towed to a dock at Barriefield, near here next week. The ship now is being painted and cleaned in Toronto. It is the KMA's centennial project and is expected to be a tourist attraction.

IF H'S FIS... and can be caught... WE HAVE IT!
QUEEN ST. MEAT MARKET

CARPETING POOR TARGET
QUESTION: Accidentally the mist from paint spraying a picture frame strayed over a large area of carpeting. I only made it worse trying to wipe it off while still wet. Now that it is dry what do you suggest?
ANSWER: Run, don't walk, to the nearest capable cleaner. Tell him what kind of paint; that is, oil base or water-mixed. Wish him luck. If you wish to try paint remover at home, first try it on a small obscure spot, and be harshly critical of the results. Then you can judge whether it's safe to proceed. But with a valuable carpet you're much safer entrusting it to a reliable pro.

LOWER HEDGE EASIER TRIM
QUESTION: Our privet hedge, three feet high, is so broad I have to trim it from each side. If I lower it by half, will it fill out again with new growth? Do you think my electric trimmer can handle the job?
ANSWER: The growth will undoubtedly sprout full and bushy. Probably a pair of clippers will be needed for branches too thick for the trimmer. But brother, I'd hate to have the trick you'd get in your back from the bending down that lowering the hedge will cause!

DULL SPOT ON FORMICA
QUESTION: I have a Formica sink top. One spot we use a lot, to put the coffee pot, soda bottles on — is very dull and stains easily. What can I put on to protect it and brighten up the dull color?
ANSWER: If the color has actually faded, I doubt if it can be brightened. But you can get a brighter effect, and certainly halt more dulling by a treatment with a good, tough car wax.

WATERPROOFED
QUESTION: I have just finished basing and waterproofing our basement walls with an epoxy sealer. However, it has left a shiny surface. What kind of paint can I put on now, preferably the most economical?
ANSWER: The most economical is invariably the best quality paint you can buy. Naturally, it should be a paint made for masonry.
LIME CUTS PRESSURE
QUESTION: My hot water heating system has a coil for the hot water. In a year's time the pressure dropped down to half. I have installed a water-softening system and would like to know what will dissolve the lime deposit in the coil to restore the pressure.
ANSWER: Sorry, I know of no chemical to do this job, with I did! But if any kind friend can help us out, his experience will be very welcome. The most practical suggestion I can offer is to replace the coil.

Interest In U.S. Securities Has Tipped Profit Scale

MONTREAL (CP)—Greater Canadian investor interest in United States securities may lead more Canadian investment houses to take out full memberships in U.S. stock exchanges. Financial sources in Montreal say the situation has tipped the commission profit scale in favor of U.S. brokers and that, from a Canadian broker's viewpoint, has had a detrimental effect on a long-standing reciprocal commission-fee deal with U.S. investment houses. Kippen and Co., last spring announced membership on the Midwest Stock Exchange in Chicago. Earlier this year another Montreal firm, Lafferty, Harwood and Co., joined the Philadelphia, Baltimore and Washington Exchange. James Richardson and Sons joined the Midwest exchange in 1964. Canadian houses would like to become members of the New York Stock Exchange but the regulations pose a barrier for most. There are rules about the controlling partner living within a certain distance of New York and being an American citizen. Large Canadian houses work on a reciprocal arrangement

with U.S. houses, paying the Americans full commissions when buying U.S. stocks. The Americans pay two-thirds of the commission when buying Canadian stocks. The two-thirds commission rule also applies to European banks and smaller Canadian non-member brokers who buy 000 shares traded a day compared with 450,000 on the Midwest. "These are industrial stocks," Kippen and Co. said. "We can execute orders at prices identical to New York. The Midwest is three times as big as the Montreal Stock Exchange, equivalent to the Toronto exchange in dollar value." It is possible that renewed interest in Canadian stocks is the offering Canadian mutual funds are allowed to receive up to 15 per cent of their equity income from U.S. securities. There is a feeling that many of these income funds must be near the limit.

COOK PIONEERED
The first ship to cross the Antarctic Circle was Capt. James Cook's Resolution in 1773.

Corn Estimate Down Slightly

WASHINGTON (AP)—The U.S. agriculture department's August crop report has estimated this year's production of corn for grain—a major livestock feed grain—at 2.21 billion bushels. It also estimated wheat production at 1.286 billion bushels. The corn estimate is down from the department's July forecast of 4.221 billion bushels. Last year's crop was 4.171 billion bushels and the 1964 average was 3.769 billion bushels. The wheat figure is up from last month's 1.340 billion bushels. It compares with 1.326 billion last year and 1.223 billion for the average.

64,944,000 bushels compared with 62,792,000 last month, 63,886,000 last year and 46,595,000 for the average. Production of spring wheat other than durum was forecast at 186,720,000 bushels, compared with 194,669,000 indicated in July. 233,785,000 production last year and 187,064,000 for the average. The indicated production of livestock feed grain—at 3,931 million bushels compared with the 221,000 bushels it also estimated wheat production at 1.286 billion bushels. The corn estimate is down from the department's July forecast of 4.221 billion bushels. Last year's crop was 4.171 billion bushels and the 1964 average was 3.769 billion bushels. The wheat figure is up from last month's 1.340 billion bushels. It compares with 1.326 billion last year and 1.223 billion for the average. Both these crops were grown under federal production controls designed to prevent surplus production. However, since they were planted surplus supplies of grains have largely disappeared, mainly under foreign aid shipments and a heavy demand by livestock producers at home and abroad. The winter wheat crop was indicated at 1,032,632,000 bushels compared with 932,613,000 forecast last month, 1,024,075,000 produced last year and 983,009,000 for the five-year average. Durum wheat was put at 186,720,000 bushels, compared with 194,669,000 indicated in July. 233,785,000 production last year and 187,064,000 for the average. The indicated production of livestock feed grain—at 3,931 million bushels compared with the 221,000 bushels it also estimated wheat production at 1.286 billion bushels.
