Jones revealed that to date there has been an enthusiastic response in the formation of the Life Saver Club. Fisheries Minister Tells Fish Story To Commons

OTTAWA (CP)—Fisheries Minister Sinclair told a fish story in the Commons Thursday. It was a whopper. It had nothing to do with the big one that got away. Rather, it dealt with the problem of protecting the Fraser River's great salmon runs against the destruction resulting from the construction of power dams. Fish experts, he said, don't know exactly what can be done to keep the fish safe, but there are a number of things that can be done to reduce the dangers.

Community Concert Audience Charmed By Gifted Pianist

Concert pianist Herman Godes speaks and is "nearly human," as an Atlantic Provinces lady discovered on an earlier tour. He has the happy ability to make close contact with his audience. In a few words he establishes a firm bond of understanding.

What the Community Concert members discovered last evening also, is that Mr. Godes is a superb artist at the piano. There was an ease, a confident ease, about the way in which he played the most intricate or the most impassioned passages which heightened the effect.

Showing outstanding versatility of mood and style he brought his audience a new appreciation of the piano compositions of Brahms, Beethoven and Chopin. From the first intimate phrases of the Capriccio in F sharp minor to the romantic Ballade in A Flat major, Opus 47 he treated his audience to experiences of excitement, gaiety, sadness and perhaps chivalry.

Turning to brief modern American works he played the polyphonic Bagatelle No. 1 by Arthur Berger with its two independent voices; and the harmonious Nocturne in E by Norman Dello Joio in which the melody has its choral accompaniment; he played Cat and Mouse or Scherzo humoristique by Aaron Copland. Despite the funeral bars near the end the audience could readily picture the mood limping to safety. The modern section ended with inspired boogie woogie in Tocatta ostinato by Robert Palmer.

In whatever mood or style, however, the artist captivated his audience. They were kept on the verge of a great discovery. Senes became abnormally keen; one gained an insight into what is generally obscure. To Faure's Clair de lune he added Debussy's Au Clair de la Lune, adding to the haunting beauty of each by the comparison.

La Soiree dans Grenade of Debussy transported his hearers to the Spain of gaiety and love; and Feux d'artifice was not merely a fireworks display but a Royal fireworks, with the audience feeling that it was at their command.

Chopin's Polonaise, evoked memories of a gallant land in her hour of anguish and Jesu, Joy of Men's Desire by Bach was a fitting finale.

After the concert Mr. Herman Godes was guest of honour at a reception at the home of Mrs. K. S. Rogers.

West Germany Plans To "Shoot Down" Hail Storms

MUNICH (Reuters)—The West German weather service is looking for 1,200 rocket marksmen and observers to take part in an experimental rocket attack on hail storms this summer.

It will take place near Rosenheim at the foot of the Bavarian Alps, and officials hope to "shoot down" hail-producing clouds by scattering a chemical, silver iodide, among them.

The plan is based on a report by the Aerial Institute of the German weather service, which said silver iodide may be able to turn half into rain or harmless, tiny ice crystals.

Officials hope the rockets will carry silver iodide dust into the atmosphere where it will be scattered by small explosions.

USE WINDS About 1,800 rockets are to be used in the experiment. The institute's report said 150 to 200 rockets would have to be used to break up one hail storm.

Their weakness was that they could not hope to get to heights of between 13,000 feet and 20,000 feet which were normal for hail clouds. They would therefore have to rely on the wind to carry the silver iodide dust upwards from the point of explosion—about 3,500 feet—to the cloud.

The rockets cost about 40 marks (\$9.52) each. For the experiments, 200 gunners and 1,000 observers are needed. It is not yet settled how they will be recruited, though they will work under the supervision of weather experts.

It is estimated that the experiments may cost about 150,000 marks (\$35,700).
