Artsies don't use ice-cubes any more; they keep forgetting the recipe.

### How To Beat The Engineering Racket

#### Student Council Votes For Censorship

The U.P.E.I.S.C. voted Sunday night in favor of censoring material for the Cadre. This move is mainly directed at our Engineering page. We believe that people should have the right to read what they choose, and although those people who were offended by our material no longer have to see it, the ones who did enjoy it no longer have the choice.

We also feel that Derek Key's threat to resign over this matter if the student council did

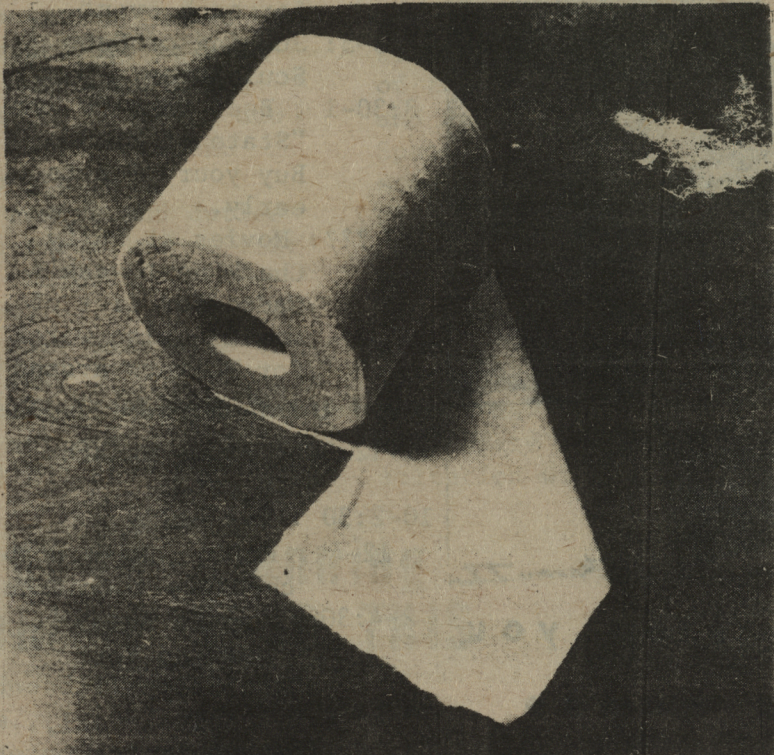

not go along with him was extremely childish and uncalled for. This shining example is protecting your innocence, students. I hope you are grateful.

\*\*\*\*\*

"What is obscenity?"

Loose and vulgar talk about human genitalia, or kids starving in ghettos? Humorous celebrations of sexual intercourse, or men getting blown to pieces by grenades? Obscenity is usually in the mind of the reader."

...Clive Barnes, 1971.

A Bachelor of Arts Degree - more than just something to hang on the wall.

First of all, engineering isn't easy, Math and Physics won't turn you on, and you'll soon find out that most of the profs won't either (except for a few weird ones). The work is tedious; you'll find yourself working your butt off all night over some boring, irrelevant problem. So we warn you to save a lot of headaches by doing nothing, enjoy yourself, and copy your little heart out. Anyway, here's some helpful hints to help you on your way.

1) start a copy pool, you'll have a large membership, i.e. (your whole class)  
2) Do not copy blindly, and don't worry unnecessarily about being found out, as the profs expect it, and are used to it anyway. After all that's how they got through university themselves. If you don't copy you'll go crazy trying to keep up and you'll either drop out or die a virgin.

3) Take pride in your plagiarism, and above all, make your copy better than the guy you copy from so the prof thinks he copied it from you.

4) After you have finished your masterpiece and you've stapled your work together, bend the corner of the page where it's been stapled. You'll find this is a very good diversion tactic as the prof has proof that someone has been tampering with your work and he'll think someone copied off you.

5) Make sure when you hand in your assignment that you sneakily say to the prof, "Boy, that sure was a tough assignment."; he'll remember you as a hard worker and never suspect you.

6) Lab write-ups are very good practice for the

beginner, and always remember to draw the graphs and then plot the experimental data. You will find that by doing this you will save yourself a lot of unnecessary explaining. You can copy almost everything in the experiment except the conclusion. By making up your own, you'll feel as though you have really been working.

7) Unfortunately you're on your own when exam time rolls along. The writer has found through trial and error that cramming is the only way and if that doesn't work get up during the exam, and take notes from one of your neighbors. You'll find that no one will bother you as the other students and profs will think that you're a prof.

8) Another good exam trick which I have found useful for computer exams is to put the number of the question on your calculator with the corresponding answer in the memory, then pass your calculator to the guy next to you pretending he needs it. This is a sure fire method of winning friends and influencing people.

9) Another old time favourite is to leave your book and notes in your favourite urinal, and during the exam, shove your finger down your throat and throw up all over your desk and the prof, so if he decides to go with you to the can, he'll be so busy washing up that you can get all the necessary information.

Other good tricks I am sure you will pick up on your own. Always remember that copying is an art and anything worth having is worth copying.

I. Zerox

### Enginsports

In broomball games in the last week, the engineers once again emerged victorious beating business 2-1 and humiliating biology 2-0.

Donnie Gallant had his second shutout of the year and since the season started has allowed only three goals. Donnie feels his performance has a lot to do with the engineers strong defence and aggressive offence.

Artsie (to prof): I don't think I deserve this zero on my essay.  
Prof: Neither do I, but it's the lowest mark we've got.

A sign over a body rub parlor: We're Never Clothed.

Clubs for Artsies should be permitted ..... but only if kindness fails.

DO YOU KNOW YOUR BEER ?

WE BET YOU DON'T
