

B. A. Degree

Mr. James Bartlett Mair received a B. A. degree from St. George Williams College, Montreal, in June. He majored in Sociology. He will enter George Williams College in Chicago this Fall, where he will study for a M. A. degree. Mr. Mair will be accompanied to Chicago by his wife, the former Laura King of Charlottetown. During the holiday months he is serving as a leader at the Y. M. C. A. summer camp at Camp Kanawona, Montreal.

Pretty Wedding At Montague

*A very pretty wedding was solemnized at the Presbyterian manse, Montague, Thursday afternoon, August 13th, when Freda Fraser Balderston, Montague, became the bride of Duncan Bruce, Milltown. The ceremony was performed by Rev. F. N. Young.

The bride looked charming in a grey gabardine suit with pink accessories, and a corsage of pink roses. She was attended by her sister, Mrs. Garnet MacIntyre, who wore wine with white accessories and a corsage of white roses. Mr. Garnet MacIntyre, brother-in-law of the bride, was best man.

Immediately following the ceremony, Mr. and Mrs. Bruce left on a short wedding trip. On their return they will reside in Milltown, where the groom is a prosperous farmer.

Mr. William MacEachern returned to Montague after a very pleasant visit with his wife and friends in British Columbia.

Mr. Barry MacLure, Fredericton, N. B., is spending his vacation at the home of his parents, Mr. and Mrs. Charles MacLure, Montague.

*MONTAGUE Gospel Tabernacle baptismal service leaving the Tabernacle at 3:00 p.m. Evening service 7:30 p.m. All invited.

Contract Let For New Bridge At Montague

The contract for the construction of the new bridge at Montague has been let to R. A. Blyth, St. Andrew Gardens, Toronto, Ont. The announcement was made yesterday by Hon. Dougald MacKinnon, Minister of Public Works and Highways who added that the work of construction would commence as quickly as possible after the assembly of equipment and material which will begin immediately.

The firm name of R. A. Blyth is new in bridge construction in this Province but they have built a number of bridges in Nova Scotia which have proven satisfactory. Their tender of \$55,996 for the Montague job was the lowest submitted, with others ranging from \$73,252.70 to \$134,818.10.

The new bridge will replace the old steel structure on the main highway through the town where it crosses the Montague river. It will be approximately 185 feet long with a road-way 24 feet wide and a 5 foot sidewalk. The bridge is of three spans design with the centre 80 feet long and shorter spans of 40 feet at each end. There will be an abutment at each end and also entrance posts.

FINAL TO-DAY MORE FUN AND MUSIC THAN EVER!

Dr. Joan Belcher of the Ontario Veterinary College has written an article for the Black Fox Magazine and Modern Mink Breeder on the information may be of benefit to our mink ranching readers of this column. The nine most prevalent are: 1. Cystic Calculi, 2. Enteritis, 3. Yellow Liver, 4. Nursing Sickness, 5. Heat Stroke, 6. Pneumonia, 7. Rickets, 8. Distemper, and 9. Virus Enteritis. CYSTIC CALCULI (1) The cause of cystic calculi or formation of stones in the bladder has not yet been determined. It is reported infrequently from the Pacific Coast and the Maritime Provinces but is commonly found in the north central area of the United States and is prevalent in Ontario.

Stones may vary in size from almost an inch in diameter to particles so small they resemble fine sand, and may be either rough or smooth in appearance, but in each case they have been found to be composed mainly of magnesium ammonium phosphate hexahydrate. In experiments with rats, the addition to the diet of ammonium chloride which acidifies the urine, was found to prevent the formation of calculi and to cause its dissolution. This condition mainly affects females during the time immediately prior to whelping, or when nursing kits. Male kits are sometimes affected after weaning. The affected animal may show little signs of illness before death; occasionally there may be a straddling gait, partial paralysis, straining, or dribbling urine. Post mortem examination of the usually distended inflamed bladder will reveal the presence of the stones. Until the cause of cystic calculi has been determined there is little one can do to control its occurrence. Why one rancher loses 10 per cent of his females and his neighbor with an apparently similar program of ranch management loses none, is one of the many unanswered riddles of the fur industry.

ENTERITIS (2): Enteritis or inflammation of the intestine may be caused by irritants such as residual chemicals used in disinfecting water pans, or feed boards, or rough objects in the feed such as fish bones, coarse cereal or ingested bedding, nutritional deficiencies, or probably most commonly by bacterial infections. Symptoms vary—the animal may go off its feed, have blood stained diarrhoea and die within a few days or it may have a ravenous appetite, black droppings, and rapidly lose weight but live for two or three weeks. Depending on the causative agent, many or few animals may be affected. Control—To institute measures for control, the correct diagnosis of the causative agent is important. In the case of bacterial infections, measures must be

NURSING SICKNESS (4):—This occurs in nursing females, at the time of or just preceding the weaning of kits. The cause is unknown but nutritional deficiency has been suspected. Symptoms—Females with large litters or those females which are abnormally nervous are often affected. Nervous females may become very thin, begin to run up and down the pen eating poorly at first and finally refusing all food. Others just become weak and shaky and finally die. Management seems to be the only method of control. Careful observation of all females with litters will help to detect early those which are rapidly losing weight. At least part, if not all of the litter should be removed at once. The practice of making food accessible to kits as soon as they are able to take any solid food lessens the burden on the nursing mother and may help to prevent her becoming depleted. The appetite of the female off feed may sometimes be tempted with freshly killed meat, but often it is too late if she actually stops eating.

Death At Victoria Cross Of Mrs. Mary Compton Yesterday

*The death occurred early yesterday morning of Mrs. Mary Compton, age 75, at the home of her daughter, Mrs. Stewart Adams, Victoria Cross. The deceased, nee Mary MacLeod, was the daughter of the late Mr. and Mrs. John Norman MacLeod. She lived in Murray River for many years, leaving there only a few years ago to live with her daughters.

She was twice married. Her first husband, Sewell Buchanan passed away a considerable number of years ago, and her second husband, William Compton, has also predeceased her. She is survived by three children of her first marriage, Warren in Eldon, Ethel, Mrs. Stewart Adams, and Ella, Mrs. John M. MacLeod, of Victoria Cross. Also surviving are four sisters, Hannah, Mrs. George MacKay, Trenton, N.S.; Mrs. Sarah Fraser, New Glasgow, N.S.; Amelia, Mrs. William MacKay, Murray River; and Miss Margaret MacLeod, Boston, Mass. A brother, Frederick predeceased her.

The funeral service will be held Sunday at 1:30 p.m. from the Church of Scotland, Murray River.

maintains a fairly constant body temperature under normal conditions. When this mechanism fails, heat retention results. Failure may be due to sunstroke, prolonged exposure to the direct rays of the sun and resulting injury to the heat regulating center in the brain, or to the physical obstacles which inhibit the normal process of heat elimination by radiation and evaporation. Symptoms—Kits in the nest box usually die without signs of distress being noticed. Older kits or adults may show distress by panting and increased nervousness and later stretch out, become dull, and die in a coma, or movements may become unsteady, the hind quarters appear weak, and they may die in a convulsion. Aff-

To Complete Rooms In School *Mr. William Whiteway, building contractor, has been engaged to complete the remaining two rooms in the new 6-room school which he completed at Montague last February.

Mr. Whiteway and his employees are presently engaged in the task, and expect to complete the work in the next two weeks.

During the past several years Montague school has been in a difficult position, due to overcrowding, and several classes were held in the basement and others at various points in the town. The new school, which provides accommodation for six grades, if necessary, has eliminated this difficulty. It is of modern styling, well equipped and conveniently located.

Roscommon in the Republic of Ireland has the remains of a cattle dating from the 13th century.
