## CAMPBELL'S QUININE WINE.

INVALUABLE in cases of Loss of Appetite, Weak or Painful Indigestion, Malaria, Lowness of Spirits, Fevers of all kinds, and as a general Strengthening of the System when weakened by changes of the season.

It is necessary to remember that there are many so-called Quinine Wines, but that the GREAT ORIGINAL is "Campbell's," and that the genuine bears our signature upon the label. The best proof of its value is the fact that its sale at the present time is larger than ever before.

The following certificate shows how CAMPBELL'S QUININE WINE is appreciated. Having submitted two samples of Quinine Wine, imitations of the genuine, along with a sample of our own, to the Public Analyst, we received the following reply:—"CAMPBELL'S is the only genuine Quinine Wine of the three samples examined at Messrs. Kenneth Campbell & Co's. request."

## Beyond a Doubt

THERE IS NOTHING that interests the average man as much as the price he pays for his Clothing—unless it is the price he pays for his Wife's Clothing. We don't deal in the latter. In the former we have an assortment that for General Excellence and Low Prices has absolutely no equal in the city. We do not claim to be the Cheapest Clothier, but we claim to give the Best Value.

Our READY-MADE CLOTHING is manufactured on the premises by competent workmen, and of good material. No shoddy. No moss-back cloths. We can give you a solid ALL-WOOL TWEED SUIT for \$7.25. It pays to deal with

**BRUCE THE CLOTHIER.**

### LETTERS TO THE EDITOR.

#### Experimental Farms.

SIR,—I have just received a marked copy of THE EXAMINER of June 8th calling my attention to an article on experimental farming, by J. W. Palmer, of this college, and also of your city. In this article Mr. Palmer explains that there was some misapprehension in regard to some statements made by me in a previous letter which was published in your island press, bearing on the cost of experimental farms. I interpret the mailing of this marked copy as an invitation to me to say something more on the subject.

To this invitation I will try and respond, notwithstanding the extreme pressure of work here at this season, when we are having on an average 500 farmer visitors a day, who come from all parts of the Province on excursions expressly arranged for this purpose. And here I desire to say in reference to Mr. Palmer, that he has just graduated with honors, the first man in his year. I state this in justice to him and also in justice to the people of your island.

Mr. Palmer correctly interprets my letter when he says that I did not mean that the experimental portion of the work was self-sustaining. That cannot be in any case from the very nature of the work. While many of the experiments succeed, there will always be a larger number which will fail. The return comes in the benefits which the knowledge of those failures and successes confer upon the agricultural community generally.

To illustrate, take our own experimental station. In this Province there are probably 200,000 acres of bare fallow. If the labor of man and team were hired to do this work it would cost the Province \$2,000,000 annually. Now we are trying to show our people that this unnecessary outlay may be avoided in most instances by another system of farming. We are clearing this farm from foul weeds, and doing it most effectively by growing rye and rape and certain other crops on the land that would otherwise be bare fallow. If by our experiments in this line we can succeed in persuading our farmers to give up the bare fallow so far as possible, by so doing the gain to the country at large would be very great.

We are now testing at this farm about 60 kinds of winter wheat, some 60 kinds of barley, 116 kinds of oats, some 80 kinds of spring wheat, 82 varieties of corn, 70 varieties of potatoes, 109 kinds of roots, and other crops in proportion. Now, if we can introduce a kind of winter wheat that would add but one bush more to the acre in yield over the province, we would add nearly \$500,000 annually to the wealth of the country. If a variety of oats can be thus introduced which would increase the yield of oats by one bush per acre, the gain to the country would be \$300,000 per year, on the supposition that they be generally grown—which would not be the case, of course, for some time; nor would any one variety give equally good results over the whole of Ontario. But suppose such results were obtained by only one-tenth of the farmers of this province, this institution would then be the best paying investment in all Ontario.

Again, we have in our stables at the present time a row of experimental grade steers of different breeds. These steers have been treated and fed similarly since the day of birth. One of them when one year old was worth \$10 more than he cost us. Another one when one year old was worth \$10 less than he cost. The former was well bred, the latter was a scrub, such as many of our farmers still try to turn into beef. I admit these are extreme cases. But suppose the cost in one case had been only \$5 more than in the other, when you multiply this result by the thousands thus kept in the country, in the aggregate it amounts to a large sum.

It is thus apparent that experimental stations properly handled may be of immense service to any country; when not properly handled, on the other hand, they may do very much injury by misleading. I desire to repeat again what I have already said in substance to your people before, and I desire to say it with all possible emphasis, that no agricultural country on this continent can any longer afford to be without an efficient experimental station, otherwise it will soon fall hopelessly behind in the race of progress.

At this station we have a farm, a large portion of which was not hitherto devoted to experimental work. Some of the farmers complained because in years gone by this had not paid its way. Last year a separate account was kept, with the result that the farm proper showed a balance of \$1,709.25 on the right side. With the same amount of land devoted to farming purpose, I have stated publicly that I would undertake to show a balance on the right side every year, that is, one year with another; but the experimental work of the farm is developing so rapidly that this idea will soon have to be abandoned. We have this year more than 100 acres directly under experiment and soon the larger half of the farm will be used in that way. With a well equipped and efficiently conducted experimental station, with a man level-headed and brimful of enthusiasm at the helm, and a proper system of distributing and diffusing information therefrom, the result cannot be other than the gradual uplifting of the whole system of agriculture to a higher place.

THOS. SHAW,  
Ontario Agricultural College, Guelph,  
June 26th, 1891.

MANY prominent men are now being carried off by the ravages of la grippe. When we consider that by using Campbell's Quinine Wine as a preventative we can ward off the attacks of la grippe, we would advise you to purchase a bottle from your druggist.

FOR the cure of female weakness, suppressions, nervousness, bearing down pains and all those peculiar ailments that make woman's life almost unbearable, Dr. Williams' Pink Pills are an unfailing cure. They build up the blood, restore the nerves and bring a glow of health to sallow cheeks. All dealers, or by mail post paid on receipt of price (50 cents a box). Dr. Williams' Med. Co., Brockville, Ont.

### Fishery Bulletin.

(Fisheries Intelligence Bureau Report.)

HALIFAX, July 6.—Codfishing reported good at St. John River, Long Point, Percé, Newport Point, Que., and the Grand River. Bankers have arrived with excellent fares. All fisheries are reported very plentiful at Miramichi, the average catch there to-day being over 200 per man. Both the cod and haddock fishermen are doing fairly at Port Hood, Meat Cove and L'Ardoise. Cod fair at Mabou. In Nova Scotia the reports are cod fair at Canoe and Liverpool. The inshore fishery poor again at Lunenburg, but very good at Port Medway. The mackerel fishery is fair at Port Hood, C. B., and about forty barrels were taken in seine this morning at St. Peter's. One trap at Dover Bay, N. S., had 300 barrels this morning. The fishery is reported fair at Whitehead and Lunenburg. Herring are fair at Port Hood, C. B., and have struck in at North Sydney, where good catches have been made. The fish are reported very plentiful at Lunenburg and fair at Whitehead and Liverpool. A few buckets of squid per trap are being taken at Canoe, Fox Island and Crow Harbor, N. S., and quickly sold to bankers.

### News Notes.

Winnipeg is to have a \$250,000 High School.

The effects of the drouth in Madras are becoming serious.

The number of immigrants to the United States from 1820 to 1890 was 15,651,688.

It is said Venezuela is favorable to a reciprocity arrangement with the United States.

The customs returns of Montreal for the past year were \$9,065,487, an increase of \$288,611 over the preceding year.

A bell boy at the Grand Union Hotel, Ottawa, has confessed to stealing Mrs. Alexander Mackenzie's jewelry.

The Italian troubles have diverted American travel from Rome, and the shopkeepers say their losses have been very large.

While the armies of the British empire cost about \$177,000,000 a year, the German empire costs about \$167,000,000 a year and the French army a little over \$140,000,000.

The most unhappy period of marriage, according to French divorce statistics, is for the period extending from the fifth to the tenth year. After that the figures drop rapidly. Only 27 per cent of couples seek divorce between their tenth and twentieth years of union. Only one pair in a hundred seeks to cut the knot after the period over thirty and under forty years.

Old 3—Schr Sylvia Jane, Wright, Richibucto, bal; Pholine, Hauser, Port Elgin, herring; Haley Ann, Jimmie, Ch'town, lumber in same bottom from Chatham.

"FRENCH No. 1" FOUND GUILTY.—The trial of the Amer Ben Ali, better known as "Frenchy, No. 1," for the murder of the old woman Carrie Brown, known as "Old Shakespear," which has been in progress in New York for some time past, was concluded on Friday, the jury returning a verdict of murder in the second degree. The prosecution proved in a scientific way that the blood found on Ben Ali's shirt was the blood of "Old Shakespear." Dr. Formad, the eminent microscopist of Philadelphia, examined the blood and swore positively that it was the blood of the murdered woman, that the woman had eaten cheese, cabbage and rhubarb, and the blood found on the shirt contained scientific indications of these articles of food. The woman was first strangled, and the blood was that of a dead person. It was also proved that the knife found in the room was the property of Frenchy, and that it had been used by him at fourteen meals while in jail.

FOR OVER FIFTY YEARS Mrs. Winsloe's Soothing Syrup has been used by millions of mothers for their children while cutting teeth. It relieves the little sufferer at once; it produces natural, quiet sleep by relieving the child from pain, and the little cherub awakes as "bright as a button." It is very pleasant to taste. It soothes the child, softens the gums, allays all pain, relieves wind, regulates the bowels, and is the best-known remedy for diarrhoea, whether arising from teething or other causes. Twenty-five cents a bottle. Be sure and ask for "Mrs. Winsloe's Soothing Syrup," and take no other kind.
