

# Oil Is Solution To Drying Woes

Wintertime with its slush, and freezing weather snow can exercise a distressing effect on Prince Edward Island's fastidious housekeepers.

Where to put dripping overalls, rubbers, umbrellas and snow suits covered with snow? How to keep guests' overcoats from that chilly hall closet? How to dry laundry on damp, soggy days?

These are only a few of the problems, but they can be conveniently solved if you are a user of oil heat.

You can't keep children from playing in freshly fallen snow, and keeping them from dripping melting snow over clean floors is a try the patience of the most devoted mother.

## EAT CLOSET

The solution of the problem is to heat the clothes closet which will most likely be used the most during the winter months. A sheet metal floor should be installed in the closet with a small drain that can be connected with the plumbing system. Then a grid shelf for rubbers and overalls would be placed about six-inches above the floor.

A four-inch warm air duct from the warm air heating system installed into the closet will admit a flow of warm air and will melt accumulated snow on coats and rubbers. The water will drip the sheet metal floor and will run away.

One point to keep in mind is that a 1/2 inch clearance should be left between the bottom edge of the closet door and the floor to encourage the circulation of warm air.

## WILLY GUESTS

This same system without the sheet floor and the shelf can be used for keeping your guests' overcoats warm and snug during an evening at your home, for an unheated guest closet can serve to chill even the most jovial guest when it comes time for him to go home.

A small four by six inch register served by a small sized duct will generally do the trick. Such a register can easily be built into a house that is already built and by all means a provision for guest closet heating should be made in planning the house you intend to build.

Driving of laundry is always a wintertime problem especially on snowy days. If you have a laundry room a warm air duct running through the room will serve nicely. Or, if space is a problem the building of a laundry drying cabinet through which warm air from the furnace can be circulated in simple solution.

These tips are provided by the National Warm Air Heating and

# Crockett and Storey Ltd. Offer You...

# COMPLETE WARM-AIR HEATING SERVICE

We specialize in engineered forced warm air heating. When you call us to check your house for a new heating system the following steps are taken:—

- Our heating engineer makes a complete survey of your home, room sizes and all construction details are noted and a heat loss calculation is made according to National Warm Air Heating and Air Conditioning Association manuals. The furnace, burner, ducts and registers are sized to meet the needs of your house.
- Custom built duct fittings are made in our sheet metal shop and the complete system is installed by our furnace and burner technicians.
- The oil burner is tested and adjusted with combustion testing equipment to provide maximum efficiency and minimum oil consumption.
- The pipe dampers are adjusted and the system balanced for proper heat distribution.
- And all this can be yours for as little as \$725.00.

Why not call today for a heating survey. Of course this survey costs you nothing and places you under no obligation.

## OIL FIRED WARM AIR CONDITIONING UNIT

In selecting a Fawcett Torrid-Oil winter air conditioning unit one may be certain that it is one of the soundest investments which can be made... for with FAWCETT you have over 100 years of experience in designing and manufacturing quality home heating behind the product. When it is a Fawcett Torrid-Oil Furnace you know you have the absolute best that modern engineering and manufacturing methods can produce. As low as \$725.00 complete.

## OIL FIRED WARM AIR PIPELESS GRAVITY FURNACE

A new modern and efficient pipeless Oil Fired Warm Air Furnace for basement installation in new homes and for replacement of existing coal or wood pipeless furnaces. Here at last, is an oil furnace which will enable you to enjoy all the benefits and conveniences of oil heat at a cost practically as low as a good cast iron furnace of the same heating capacity. The cutaway view shows the clean, functional easy-to-get-at and trouble-free construction. 65,000 B.T.U. capacity makes it the ideal heating plant for the small home. As low as \$489.00 complete, including 200 gal. oil tank, installation and wiring.

Your heating system can be installed now and paid for over a five year period with lowest possible interest charges.
