TO SEE HER MAJESTY. LADIES ARE CURIOUS TO GET A GLIMPSE OF THE QUEEN.

How People Crowd the Streets Where Her Majesty Will Pass. The Queen. Dress—Her Health is Good.

A London correspondent of a New York paper writes:—On the rare occasions when the Queen does come to London her subjects always show great eagerness to catch sight of her, and the aspect of the metropolis undergoes quite a curious change when the Royal standard is floating from the roof of Buckingham Palace.

Catarrh in the Head. Is a dangerous disease because it is liable to result in loss of hearing or smell, or develop into consumption.

Read the following: "My wife has been a sufferer from catarrh for the past four years and the disease had gone so far that her eyesight was affected so that for nearly a year she was unable to read for more than five minutes at a time. She suffered severe pains in the head and at times was almost distracted. About Christmas, she commenced taking Hood's Sarsaparilla, and since that time has steadily improved. She has taken six bottles of Hood's Sarsaparilla, and is on the road to a complete cure. I cannot speak too highly of Hood's Sarsaparilla, and I cheerfully recommend it."—W. H. FRASER, Newmarket, Ontario.

Hood's Sarsaparilla Is the Only True Blood Purifier. Prominently in the public eye today.

Hood's Pills cure habitual constipation. Price 25c. per box.

Clearing Out Sale. Very low prices on the remainder of the stock of D. M. RICHARDS & CO. till 10th of June next. After that date the balance will be sold by Auction.

Any persons in need of Paint, Kalsomine, Dry and Tanned Tar Paper, Machine Oils, Hinges, Knobs and Locks, Glass, Brushes, Tinware, or any Shelf Hardware, will do well to get our prices before purchasing elsewhere.

During the Auction the stock will be sold in large or small lots to suit purchasers.

All persons indebted to the firm will kindly settle their accounts at once.

TO SEE HER MAJESTY. LADIES ARE CURIOUS TO GET A GLIMPSE OF THE QUEEN.

How People Crowd the Streets Where Her Majesty Will Pass. The Queen. Dress—Her Health is Good.

A London correspondent of a New York paper writes:—On the rare occasions when the Queen does come to London her subjects always show great eagerness to catch sight of her, and the aspect of the metropolis undergoes quite a curious change when the Royal standard is floating from the roof of Buckingham Palace.

By merely walking about the West End I am certain I could tell that the Queen had arrived even if the daily paper had not already told me so. There are various signs and symptoms which mean royalty in the royal carriage, and you will find him surrounded by old ladies, who expect him to be acquainted with every thought that passes through the mind of what Carlyle calls "Majesty." Where will the Queen drive, and when? From what place of Buckingham Palace will the carriage of Majesty issue, and what will be the destination of the royal party? Other questions, drive the men in blue almost to despair, when the court is in London. But the energy and determination of the ladies desirous of seeing the Queen overcome all obstacles. They will stand in the mud or frost for hours on the chance of catching a glimpse of the royal carriage, and many of them travel up from distant country places merely in order to wave a handkerchief, and give vent to a murmur of welcome. That reveals all as to the Queen's Royal movements sometimes leads to royal comical scenes. About half-past four on the last drawing-room day I was walking quietly up Piccadilly when I noticed a gradual haste overtaking the people whom I met. Sedate ladies suddenly began to hustle.

STREET SCENES OPENLY SHOWN. And, even some individuals in top hats and fur coats caught the general infection, and there was a regular stampede. These good people fancied they were escorting the Queen on her afternoon drive. I was at Victoria station to witness the royal arrival, and the crowd extended from the station yard all the way down Buckingham Palace. The train was a quarter of an hour late in reaching the terminus, and the ten royal carriages, all of them horsed with fine ways, had a long while to wait. The Queen's Indian attendant drove out of the yard first in a brougham, accompanied by two ladies, then came the Guards, then the outriders in scarlet, and then the Queen's carriage and four. The HOODS WERE THROWN BACK.

By command of Her Majesty, so that all could plainly see the sovereign, who was very warmly wrapped up, and who bowed frequently in response to the loud cheering and waving of handkerchiefs. The Empress Frederick, who looked as if she had a cold, sat at the Queen's left hand, and Princess Henry of Battenberg was opposite. The Queen seemed to sit much lower in the carriage than usual. I thought the Empress Frederick, who was of course, in black, wore a very long thin black veil, which blew about in the bitter wind as the carriage moved on. Princess Henry was looking the picture of health and very handsome. She holds herself splendidly, even regally, and wears the most brilliant diamonds, a coat, trimmed with sable, and wore a hat with violets. The hoods trotted very slowly, so that every one was able to see the Queen and her attendants in excellent health and spirits at present.

TO SEE HER MAJESTY. LADIES ARE CURIOUS TO GET A GLIMPSE OF THE QUEEN.

How People Crowd the Streets Where Her Majesty Will Pass. The Queen. Dress—Her Health is Good.

A London correspondent of a New York paper writes:—On the rare occasions when the Queen does come to London her subjects always show great eagerness to catch sight of her, and the aspect of the metropolis undergoes quite a curious change when the Royal standard is floating from the roof of Buckingham Palace.

By merely walking about the West End I am certain I could tell that the Queen had arrived even if the daily paper had not already told me so. There are various signs and symptoms which mean royalty in the royal carriage, and you will find him surrounded by old ladies, who expect him to be acquainted with every thought that passes through the mind of what Carlyle calls "Majesty." Where will the Queen drive, and when? From what place of Buckingham Palace will the carriage of Majesty issue, and what will be the destination of the royal party? Other questions, drive the men in blue almost to despair, when the court is in London. But the energy and determination of the ladies desirous of seeing the Queen overcome all obstacles. They will stand in the mud or frost for hours on the chance of catching a glimpse of the royal carriage, and many of them travel up from distant country places merely in order to wave a handkerchief, and give vent to a murmur of welcome. That reveals all as to the Queen's Royal movements sometimes leads to royal comical scenes. About half-past four on the last drawing-room day I was walking quietly up Piccadilly when I noticed a gradual haste overtaking the people whom I met. Sedate ladies suddenly began to hustle.

STREET SCENES OPENLY SHOWN. And, even some individuals in top hats and fur coats caught the general infection, and there was a regular stampede. These good people fancied they were escorting the Queen on her afternoon drive. I was at Victoria station to witness the royal arrival, and the crowd extended from the station yard all the way down Buckingham Palace. The train was a quarter of an hour late in reaching the terminus, and the ten royal carriages, all of them horsed with fine ways, had a long while to wait. The Queen's Indian attendant drove out of the yard first in a brougham, accompanied by two ladies, then came the Guards, then the outriders in scarlet, and then the Queen's carriage and four. The HOODS WERE THROWN BACK.

By command of Her Majesty, so that all could plainly see the sovereign, who was very warmly wrapped up, and who bowed frequently in response to the loud cheering and waving of handkerchiefs. The Empress Frederick, who looked as if she had a cold, sat at the Queen's left hand, and Princess Henry of Battenberg was opposite. The Queen seemed to sit much lower in the carriage than usual. I thought the Empress Frederick, who was of course, in black, wore a very long thin black veil, which blew about in the bitter wind as the carriage moved on. Princess Henry was looking the picture of health and very handsome. She holds herself splendidly, even regally, and wears the most brilliant diamonds, a coat, trimmed with sable, and wore a hat with violets. The hoods trotted very slowly, so that every one was able to see the Queen and her attendants in excellent health and spirits at present.

THE QUEEN'S DRESS. It has been pointed out that those who grumble at the Queen's simplicity of dress are mistaken in thinking that she does not encourage trade. During the past year she had nearly seventy gowns made by one dressmaker and she had several ordinary ones, not court dresses. The reason why people imagine that the Queen never has new things is that she wears the same dress for so long. Always averse to change, merely for fashion's sake, the Queen insists on having her gowns all made alike, so that she may avoid the feeling that she has on new clothes, and be as comfortable as in the old. On either side of the bodice she has a small pocket—one for her watch, the other for her eye-glasses—and they must be in exactly the old position, so as to be found without trouble. Just below the collar—which, by the way, is never allowed to be of fashionable height or tightness—is a secret pocket for the

KEY OF THE DESPATCH BOX. Moreover, no matter what the materials of the gown, pieces of crepe has to be placed upon it somewhere, the Queen having kept up this custom ever since her widowhood. Her Majesty is a great admirer of the old-fashioned, and she has very small hands, of which she is, perhaps, a trifle proud. Though she possesses magnificent furs, she very seldom wears them, hence her adoption of sable—and such sable—as at the drawing-room caused considerable satisfaction. Sasholkin she cannot endure, and the even dislikes the smell of it. It was noticed at the drawing-room last week that a great many of the young ladies, and not a few also of those who have reached middle age, wore their hair puffed out over the ears, in the new Parisian fashion. The style is rather more universally becoming than some of those which have been the rage lately. English hairdressers do not, however, cover the whole of the ear, as the mode is in Paris, and the hair, which is very thickly waved, is raised at each side of the center parting, whilst the puff, which partially covers the ears, is held in its place against the coils at the back by little jeweled combs.

Proved. Wife—"Don't you think I am more economical than you were a year ago?" Husband—"I have not noticed any change in your expenditure." Wife reproachfully—"Why, dear, I get twice as many things with the same money."—New York World.

PROTECTION from the grip, pneumonia, diphtheria, fever and epidemics is given by Hood's Sarsaparilla. It makes Pure Blood.

New woman—Is there any good reason why there should not be female lawyers, female congresses or female senators? Menk man—None whatever. What the people object to is female gentlemen.

Germany has adopted the system of separating the bright pupils from the stupid ones in the public schools. The stupid is to be done not by teachers, but by medical men.

Grateful—Comforting. EPPS'S COCOA BREAKFAST—SUPPER.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided for our breakfast and supper a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal ailment by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus, JAMES EPPS & CO., Ltd, Homoeopathic Chemists, London England.

USE SUNLIGHT SOAP. PRICE REDUCED. 6c THE TWIN BAR. EVERYBODY CAN NOW AFFORD IT.

Merely a suggestion. Why pay a quarter for three cigars when you can get five "Something Goods" for the same money?—and they are equal to any (en center. We don't want you to take our word for it either, we only ask you to buy a quarter's worth and judge for yourself.

They are on sale everywhere, and are manufactured by the EMPIRE TOBACCO CO., may3-246 & w Montreal.

THE WORLD OF LABOR. ECHOES FROM THE BUSY MILL AND THE WORKSHOP.

News and Happenings of special interest in the Various Fields where Mechanic and Artisan Hold sway might and main.

Italy has 23 crematories. A gun fires 770 shots a minute. Switzerland has wretched schools. John Bull built 21 war ships in 1891. Norway ships frozen milk to England. London has thirty people whose incomes are over \$500,000 a year. A stove for burning coal dust has just been invented in Germany. This fuel gives intense heat. The hall porter of a London club pleasantly admits that his position brings him in about \$7,500 a year. Keys of bronze and iron have been found in Greece and Italy, dating from at least the seventh century before Christ. The largest sailing ship afloat is the remodelled Persian Monarch, 3223 tons measurement. Her iron masts are 184 feet high from the deck. The best root sugar crop of the United States is something over 40,000,000 pounds a year, of which California produces 29,000,000 pounds or thereabouts. Czar Nicholas has established a fund of \$20,000 to relieve journalists and authors in distress and to provide for the widows of men who are killed in the war. The Japanese begin building their houses at the top. The roof is first built and elevated on a skeleton frame. Then it affords shelter to the workmen from storms. Wheat can be grown in the Alps at an elevation of 5,000 feet; in Brazil at 5,000; in the Caucasus at 8,000; in Abyssinia at 10,000; in Peru and Bolivia at 11,000. Twenty million dollars worth of bank notes leave the bank of England daily, while sixty million volumes of letters are filled with writing in keeping the accounts of a single day. The French custom of Madagascars will be surrounded with electrical currents so arranged that the approach of any one will be automatically signalled. A bill has been introduced in the Minnesota Senate for the application of the Australian ballot system to the granting of licenses to sell intoxicating liquor. From the Patent Office at Washington comes the report that in the eleven years which have elapsed since the first put upon the market the sales have amounted to nearly \$30,000,000. The earliest fanning mill or winnowing machine was erected in China, and was in use there for centuries while Europeans were cleaning their grain by casting it in the air on a windy day. The new cast vocabulary of 250,000 words makes a large book. There is no word in it that contains more than ten letters, and every word differs in at least two letters from every other word. One of the proposed two-wheel or "bicycle" railways from New York to Washington promises a speed of 120 miles an hour as a result of the use of electricity and the minimizing of friction. It is said that most of the 5,000 horses shipped from America to Europe recently were intended for slaughter as food. Electricians think this a sign of the coming triumph of electricity as a motor. The output of bicycles of a high grade in Indianapolis for the present year will reach nearly 25,000, while there for nearly 100,000 wheels and chains for almost half a million will be made by the workmen of that city during the year. A French railway has lately arranged its telegraph lines so that at a prearranged signal the wires are switched from telegraph to telephone. This device, thus enabling the operator either to talk verbally or to communicate by the telegraphic code at will. A Mexican professor of physics proposes to forestall earthquakes by connecting telephones to the pipes of deep artesian wells and to metal plates sunk in deep mountain crevices. Any unusual noise in the bowels of the earth would indicate trouble. A Welshman proposes to build a ship that will have a speed of 60 miles an hour. The boat will be 50 feet long and 20 wide, with a flat bottom and wedge-shaped bow and stern, of 10,000 tons displacement, and with eight paddle-wheels on each side, making 17 revolutions a minute. While Parisian landresses are agitating against the practice of men of fashion in sending their linen to be laundered in London, the washerwomen in the British capital are in arms against the exquisites of Mayfair and St. James for sending their linen over to Holland to be washed. The biggest tie purchase in the history of Western railroading has just been concluded in Kentucky, S. E. Dutt, of St. Paul, purchasing agent for several roads, has contracted for 1,000,000 ties. Several thousand loggers will be required to get out the ties, which are to be used in relaying tracks. One of the cleverest inventions ever patented is the machine for sticking common pins in the papers in which they are sold. The contrivance brings up the pins in rows, draws the paper in position, crimps it in two lines, then at a single push passes the pins through the paper and sets them in position. The comparative cheapness of shipment by water and by land is illustrated in the matter of the new traffic of New York with Hawaii in sugar by way of Cape Horn. Sugar could be sent by San Francisco in perhaps three or four weeks, but it is profitable to bring it round the Horn, a journey of from 90 to 120 days. The velocity of a cannon ball is now measured by firing it through two screens, each one of which has an electric apparatus connected with it. As the ball strikes the screen the circuit is broken and the time that it passed through the screens is accurately recorded. Steam tramways largely take the place of electric street railways in Italy, according to a paper by Mr. P. Anonati, published by the Institution of Civil Engineers. About 25 tramway companies, working 1265 miles, have combined since 1886 to form the Italian Tramway Association, which is a common basis of working is established and all administrative matters discussed. Experience Has Proved It. A triumph in medicine was achieved when experience proved that Scott's Emulsion would not only stop the progress of Pulmonary Consumption, but by its continued use, health and vigor could be fully restored. "Don't you think that a good many of these Easter bonnet jokes are overdrawn?" she inquired. "Yes," replied her cheerless husband, "and a good many bank accounts." Washington Star.
