

CHARLOTTETOWN Business College Writing Academy

Let the searchlight of practice illuminate the dark places of theory. A THOROUGHLY Progressive Practical Institution, in which young men and women are not only taught Book-keeping (in all its applications to commerce) both by single and double entry, but are trained how to do business, by actual business transactions. The students act as buyers, sellers, traders, bankers, book-keepers and accountants, in actual business operations, as if the currency issued by the College Bank and the mids issued from the Emporium, are used in bona fide business transactions, just the same as in mercantile and banking houses. Book-keeping in itself may be learned at home, but a knowledge of how to transact business, cannot be thus acquired. That our course system of training is eminently practical write for testimonials from business men, and from students who are now holding lucrative and responsible positions.

SUBJECTS:

Book-keeping by single and double entry (theoretical and practical), Actual Business Practice, Business Penmanship, Business Correspondence, Commercial Arithmetic, Commercial Law, Railroading, Steamboating, Banking, (actual practice in the College Bank,) Typewriting, Shorthand and Navigation.

FACTULTY:

L. B. Miller, Principal, Teacher of Book-keeping, Arithmetic, Business Practice, Business Correspondence, Typewriting and Navigation.
J. W. Coulson, (Vice Principal) Teacher of Railroading, Steamboating, Penmanship, Accounting and Actual Business Practice.
J. Harry Williams, Teacher of Business Penmanship.
W. M. Moran (licensed), Teacher of Shorthand.
George S. Inman Esq., (Law Firm McDonald & Inman) Lecturer on Commercial Law.

For circulars and full information, write or apply to

L. B. MILLER, Principal.

All interested are cordially invited to call at the college and inspect our system of training, and work in general.

Prowse Bros.

Have notified us to move from our old stand, till they build us a new brick store:

We will on the 1st of April move to Great George Street, opposite John Joy's Restaurant, and for the next thirty days, we will give the biggest bargains in the history of the Jewellery trade of Charlottetown, to clear out our stock of Clocks, watches and Jewellery.
Repairing of Clocks, Watches and Jewellery, given special attention.

SCIENTIFIC MISCELLANY.

The smoke problem seems to have been solved for factories in a very satisfactory way by an Austrian engineer, Herr Fritz Maier. The solution depends upon closed furnace doors and slow feeding without admission of air from above, and it is effected by means of an automatic stoker, which drops the fuel in small quantities on the front end of the fire, and another automatic arrangement that gradually shovels the fuel along the fire. The apparatus is cooled by water which, as it becomes heated, is used to feed the boiler. Perfect combustion is claimed, and a trial of six months in a factory near Vienna is reported to have resulted in a saving of 33 per cent in fuel and 90 per cent in labor, one stoker doing the work of ten.

What he calls the "sense of return" in pigeons and other animals is regarded by M. Pierre Bonnier, in the light of the latest investigations, as not due to a sixth sense excited by the earth's magnetism, but as an extraordinary development of the memory of direction or of the power of keeping bearings. Whatever it may be, this sense is one of nine functions of the inner ear. This sense exists in man, but it has fallen into disuse, and it is in those species dependent upon the instinct for existence that it has attained greatest power.

Volcanic action on a stupendous scale seems to have convulsed our globe at the end of Cretaceous and beginning of Tertiary times. It was at this period that we deposited the immense lava-sheets of the Deccan of India, which cover some 200,000 square miles, or an area greater than that of New England and the Middle States combined, and have been regarded as the grandest example of the work of volcanoes in the world. Lava deposits even more vast are now believed by Newton and Teall to have been made in the northern hemisphere at the same period. From the geological collections of the Jackson-Harmsworth Expedition, it appears that Franz Josef Land is formed of fragments of an ancient basalt plateau, which from the distribution of similar volcanic rocks is supposed to have once included Spitzbergen, Jan Mayen, Iceland, Greenland, the Faeroes, the Hebrides and North Ireland in one continuous area of lava-made land, most of which has since sunk in the North Atlantic Ocean.

An indestructible ink for writing labels on glass bottles is thus prepared, according to a German chemist: Into a solution of 20 grammes of brown shellac in 150 cubic centimeters of lamp spirit is slowly poured a solution of 35 grammes of borax in 250 cubic centimeters of distilled water, a suitable coloring matter—such as 1 gramme of methyl violet—being then added.

Typewriters' cramp, it appears, has come to take the place of writers' cramp. We are told, however, that the discomfort

Build Up Your Health

By nourishing every part of your system with blood made pure by taking Hood's Sarsaparilla. Then you will have nerve, mental, bodily and

In the Spring digestive strength. Then you need not fear disease, because your system will readily resist scrofulous tendencies and attacks of illness. Then you will know the absolute intrinsic merit of

Hood's Sarsaparilla

The Best Spring Medicine and Blood Purifier. \$1.50 for \$5. Prepared only by C. I. Hood & Co., Lowell, Mass.

Hood's Pills act easily, promptly and effectively. 25 cents.

of such a disease is more than offset by the enforced relief from the corset that the use of the typewriter is bringing to female operators.

The long-familiar laboratory method of drying the air by means of a moisture-absorbing agent has been borrowed by a Frankfort inventor for a patented dry barrel or box for preserving vegetables and other substances. The new apparatus is simply a box with a false bottom of slats under which is placed a metallic tray containing caustic potash. The vegetables, fruit, etc., are placed on the false bottom, and the air—admitted only through the bottom—is dried before reaching them by passage over the potash. One charge of the drier is claimed to last six months.

Some marvellous feats of seeing through opaque objects that have excited much wonder at Montpellier, France, do not stand the rigid test of science. A committee of the Academy of Science and Literature hid two envelopes containing prepared cards in their coats and placed a third in a box with half an exposed photographic plate at a house a quarter of a mile away. Only the contents of the box were described, after an hour and a half, and fogging of the plate on development showed that the box had been opened.

Röntgen rays have been found to act on vegetation like very weak light in experiments by Signor G. Tolomei.

Hidden flaws in guns, engine cranks, railway wheels, propeller shafts, and other steel castings, are prevented in the process of Mr. Ellis May by an ingenious use of vacuum chambers. The mould is placed in an air tight chamber from which the air is exhausted. This chamber is surrounded by a series of other vacuum chambers, each connected with the central chamber by valve-controlled pipes, and in this way a reserve of vacuum is produced. At the moment when the steel is poured, the controlling valves are opened, and the residue of air in the casting chamber is sucked into the surrounding chambers. The air and gases in the fluid metal rush out and diffuse themselves in the vacuum, and the result is a flawless, homogeneous casting.

The Russian province of Kursk proved to be one of the most remarkable areas of magnetic disturbance yet known. M. Moureaux reports that the differences between theory and observation are so great that it is not possible to draw isomagnetic lines, and the magnetic force is as great as it would be in the immediate vicinity of the

Stomach Trouble

Stomach trouble is the common name applied to a derangement of the system which is keenly felt but vaguely understood. It may mean inability to retain food or to digest it. It may mean nausea, pain after eating, fullness, inordinate craving for food, or entire lack of appetite. Whatever it means, there's trouble, and it's with the stomach. If you have stomach trouble, you will be interested in this letter from a man who had it and was cured by

Ayer's Sarsaparilla

"For nine years I suffered from stomach trouble. I tried the aid of the best doctors of Philadelphia and Pittsburg, and spent large sums of money, all in vain. One day while waiting a train in Bellaire, O., I picked up a paper with a notice of Ayer's Sarsaparilla. I got one bottle to try it. It did me so much good that I purchased five more bottles. I took four of them and gained in flesh, my appetite improved, and now I can eat anything. My stomach is all right, thanks to the use of Ayer's Sarsaparilla."—CALVIN M. STEVENS, Uniontown, Pa.

Very Deceptive. "Appearances are very deceptive," remarked the tenor. "Yes," replied the prima donna, "especially farewell appearances."—Boston Traveler.

Same Thing. Politician—Senator Gamble is the luckiest man. Why, he's in clover. Correspondent—Huh, I thought he was in sugar.—New York Sunday World.

The languor so common at this season is due to impoverished blood. Hood's Sarsaparilla cures it by enriching the blood.

magnetic poles. The dip of the needle ranges from 48 degrees to 79 degrees. At two points about 450 yards apart the declinations are minus 11 degrees and plus 45 degrees and the variation at two places about a mile and a quarter apart is from minus 34 degrees to plus 96 degrees. Nothing near the surface to cause these anomalies is known to exist.

It is a remarkable fact that of over 100 finds of iron meteorites only nine have been seen to fall, while of over 400 kinds of stony meteorites more than one-half have been seen to fall. Mr. H. L. Preston finds several reasons for believing that the iron meteorites are merely the crystallized metallic nodules contained in the larger and more conspicuous stony meteorites.

From 123 answers to questions published two or three years ago, Messrs. V. and C. Henri find that a person's first memory may be of an event occurring as early as the age of six months or as late as eight years—two or four years being the usual age.

A night blooming leguminous plant in Trinidad is pollinated by the agency of bats.

We have been in this stand for over 22 years, but now we are going to move. Before doing so, we will offer our large stock of crockery and glassware at a bargain wholesale and retail at the cheap crockery store.—W. P. Colwill.
