TO LET.—A Double Tenement House in good order each part containing 6 rooms, situated on King St., back of Merchants Bank of P.E.I. Apply to Miss Lowden Dundas Esplanade

CUPID AT COURT.

Young Cupid strung his bow one day And sallied out for sport. As country hearts were easy prey, Odds darts, he went to court.

Of all that wore the puff and patch, Belinda led the fair. With falbala and fan to match, I trow she made him stare.

"Oho!" he cried and quickly drew His bow upon the sly. But, though he pierced her bosom through, She never breathed a sigh.

This was a turn beyond a doubt That filled him with amaze, And so he sought his mother out With tear bewildered gaze.

"You silly boy!" Dame Venus said. "Why did you waste your art? Go clip your curls and hide your head—Belinda has no heart!"

—Samuel Mintara Peck.

Mrs. Peter Brown and Her Brown Dress.

Mrs. Peter Brown was a worthy and thrifty housewife, and though proud of her Brown family she got tired of browns—she refer to brown colors.

Now, Mrs. Brown had a brown cashmere dress that she had donned on Sundays for fully three years. Going to church in sun, rain, sleet and snow for such a length of time had discolored and faded Mrs. Brown's brown dress. The material still good gave Mrs. Brown hope that the brown dress could be changed in color and made to do service until times were better and money more plentiful with her.

Mrs. Peter Brown had heard of the marvellous Diamond Fast Black for Wool, and decided to experiment in the work of home dyeing. The dye was purchased from her druggist, and the operation conducted as per directions on the envelope, and what a transformation resulted! A deep, rich pure black, equal to the finest blacks produced by French professional dyers—a new dress at a cost of about thirty cents.

Mrs. Peter Brown's experience is just the experience of thousands of economizing women in Canada today. The fine Diamond Dyes so indispensable that home would be robbed of half its pleasures if they could not procure these great money-savers.

STEAMER CAMPANA SAILING DATES.

From Montreal.	From Ch'town.
Friday, 10th Sept.	about 14th Sept
Tuesday, 21st Sept.	" 25th Sept

MODEL ROUND SILO.

Ornamental, Solid, Commodious and Rat and Water Proof.

Mr. C. W. Jennings describes in Hoard's Dairyman a model silo in northern New York. We make extracts as follows:

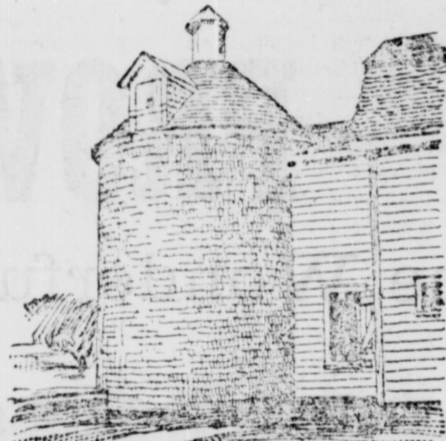

It was built in 1894. It cost, together with its connecting link with the barn, \$210. Its capacity is 200 tons. Its dimensions inside are 22 feet diameter, with height from top of the sill to top of the plate of 29 feet. The material is of the best, but the cost was somewhat lessened by my being enabled to purchase the lumber at wholesale rates, my father being the proprietor of a large sawmill and lumber yard here. But I will say here that a silo just as good as mine can be built anywhere in this county and yours for \$1.50 per ton capacity, and it may be for somewhat less.

We had a rectangular silo of 160 tons capacity in the barn, which we used for several years, but owing to the large percentage of waste silage in the corners and at the sides caused by the bulging of the walls and the need of the room it occupied for our growing herd we decided to take it out and build one outside the barn.

The bottom is kettle shaped. The ground inclines to the northwest. We simply took enough out of the south-east and south sides and threw it on the northwest side to perfect the form of the bottom. It is about three feet lower in the center than at the rim where the sils rest.

For the foundation we dug a trench 2 feet deep, which we filled with small stones mixed with grouting. On this we laid our wall, 2 feet wide at the bottom and 18 inches at the top, and in height about 1 foot above the surface of the ground. The soil is hard and dry, so that not much precaution was necessary for drainage. The foundation of the bottom consists of a layer, about 6 inches thick, of small cobblestones mixed with grouting, over which is a coating 1 1/2 inches thick of cement. The bottom is rat and waterproof, while not at all expensive.

The sils are of two thicknesses of two inch spruce plank, cut out to fit the circular wall, laid one upon the other so as to break joints. They are eight inches wide and are anchored to the foundation wall by bolts 15 inches long by three-fourths of an inch in diameter. These bolts have their lower ends

MODEL ROUND SILO.

"turned up" to prevent their becoming loosened. They were placed at proper intervals and the wall built up and around them. When the sils were put on, the whole was made perfectly level. The studding is of 2 by 6 spruce, placed 16 inches apart, all being of the same width by being passed through a planer, so that each piece is exactly 6 inches wide. There are two stories. The first one was set up and boarded, then a circular plate 2 inches thick put on, upon which the second story was set, the studding being the same distance apart and of the same size as in the lower story. The first sheathing is made of spruce boards, half an inch thick by 6 inches wide, surfaced and matched. This is covered with tarred paper, over which is another thickness of boards of the same width and thickness as the first one, so laid as to break joints. It is then covered with good cedar shingles 18 inches long, laid five inches to the weather and painted with a heavy coat of iron ore paint, mixed with raw linseed oil. The lining consists, first, of a thickness of boards, same as on the outside, each board having been jointed and matched and brought to the same thickness. A layer of tarred paper was then put on, over which is the inner lining, made of the same material as the other. Thus I have four thicknesses of half inch lumber, two of tarred paper and two dead air chambers.

The roof is conical with a dormer window on the north side, as seen in the picture, for the admission of the ensilage carrier. The rafters are 2 by 4, and the diameter of the circle at the top is two feet. Between the rafters are headers, or girders, brought even with the rafter's surface, to which the roof boards are nailed, each board being ripped cornerways or diagonally, the ends being reversed every time a board is put on. The rafters are spiked to the lower plate, also to the upper one or small circle. There is a projection, as seen in the picture, to form the cornice or finish of the roof, which is shingled, the whole being surmounted by a galvanized iron ventilator, covered with a

cap and in which is a valve or damper, to be closed in severe cold weather.

The connection with the barn is 8 feet long and the same in width and is well lighted. There is also a door opening outward on the west side. The door to the silo extends continuously from the sill to the plate and is 2 1/2 feet wide. It opens directly into the entrance or connecting link and is directly opposite the feeding alley in the stables. There are three-fourths inch iron rods that cross the doorway at intervals of two feet, passing through the studding on

each side of the door and held in place by nuts, while the door consists entirely of separate spruce boards 1 1/2 inches thick by 8 inches wide, matched. A projection of an inch of the lining on one side of the doorway, into which one end of the boards are thrust, with the pressure of the silage against them holds them in place. But one board is removed at a time, thus exposing much less silage to the air than when regular short doors are set at intervals. The inside of the silo is painted with a coat of gas tar thinned with gasoline. Another coat will be put on before again filling the silo. So finished, the silo is as airtight as a beer barrel, and when one is inside and strikes a blow on the ceiling the sound is very much like that produced by striking the inside of a large cask.

The loss in silage is so small as not to be worth mentioning. It was less than 2 per cent last season. That was all there was of it, while the silo was filled above the plate. Loss of silage is no factor and "cuts no ice" in the calculation.

We have not expended a cent for repairs, but I shall give the inside another coat of gas tar and gasoline sometime during the summer.

"How do you feed the silage?" asked the correspondent.

Enough is thrown through the silo door into the entrance for a feeding 12 hours in advance and the doors shut. In this way all odors are eliminated from the stables. We feed not far from 80 pounds per cow per day. We do not run it in on a car, because our cows do not face in the stalls. I do not like that way, so we carry the silage in baskets. Some of the larger cows and the bulls get as much as 35 pounds per day. We feed besides silage, which is given twice a day, about 8 pounds of mixed, early cut hay, mostly clover and timothy, with some red top.

"What is your grain ration?"

When the cows are in full flow, from 6 to 8 pounds, the formula being ground oats in which was mixed about 15 per cent of the barley when sown. This was raised on the farm. Of this grain, 100 pounds are mixed with 100 of wheat bran and 50 of cottonseed meal. This in two feeds—night and morning. This amount makes just about one day's rations. To put it more closely, it may be said the cows receive from 3 to 10 pounds each per day, owing to the stage of lactation and individual capacity of the cow.

We filled the silo last fall with Leaming corn, grown on 14 acres. We opened it Nov. 1 and fed the last May 25. About 65 head, old and young, cows, heifers and bulls, were fed from it. I am a firm believer in catering to capacity, appetite, digestion and assimilation and feed my cows accordingly, watching the while the results very closely.

The grain ration is sprinkled on the silage and fed immediately after milking—never before, and as we use sawdust for bedding and land plaster in the gutters there is no chance to contaminate the milk with odors. What hay they will eat is fed at 10 o'clock and will, as a rule, all be eaten by noon each day.

One cow in this gentleman's herd has a record of 472 pounds of butter in a year.

KLONDYKE!

The Land of Golden Nuggets

JOSEPH LADUE, the new Bonanza King of the Klondike Gold Regions, gives the facts. His book reads like "The Arabian Nights" BUT Joseph Ladue KNOWS whereof he writes. He was the first man on the spot when the first gold was discovered last August 1896. He located one rich claim, and immediately purchased twelve others at a low price before their value was known. He has refused \$100,000 for any ONE of these claims, as they are rich with virgin gold nuggets beyond the dreams of avarice. Joseph Ladue then

Established Dawson City,

at the mouth of the Klondyke and Yukon Rivers, by erecting the first house in the region in September, one month after the gold was first discovered. He bought 178 acres from the government on the city site where his town lots, 150x50, are now selling for \$5,000 each.

Mr. Ladue was fortunate enough to be successful in his trading post investments to have on hand ample capital to carry out his plans, and there is no man living who is better posted on Alaska and the great North West Territories than Mr. Joseph Ladue. He has just returned from that country to his old home in Schuyler Falls, N. Y., where he passed a large portion of his boyhood and early manhood. Mr. Ladue left his home nearly twenty years ago to seek his fortune in the West, going first to the Black Hills, where he was successful in gold mining, thence to Arizona and the Pacific Coast, and finally located in Alaska and the North West, where he has covered almost the entire country since 1882. Mr. Ladue is a typical pioneer; strong, hardy and resolute—a man of iron as one must needs to be to go through the hardships he has and come out with a constitution unbroken and unimpaired at the age of about forty-three. Mr. Ladue has not only worked his muscles to good advantage to himself with the result of an abundance of the world's goods far beyond the dreams of men, but he has evidently all his time been closely observing the conditions of that strange country—the Yukon Valley—which has so suddenly become one of the great centres upon which human interest throughout the world is focussed.

When the wonderful stories began to come down from the Yukon country it was naturally concluded that it was at least half exaggeration. That any such amount of gold could be taken in so short a time from a country like that under the most unfavorable conditions was held to be incredible. But when the great bags of virgin gold began to be poured out upon mint counters in San Francisco under the eyes of the whole world (for modern journalism does this, annihilating time and space), people began to wonder, and the wonder grew day by day as the real facts were disclosed, and now people who are well informed as to the facts declare that half the truth has not been told of the golden treasures of the Yukon Valley.

As we have already said, there is no man alive to-day who knows more about this wonderful country than does Mr. Ladue. What makes his talk of it specially interesting and reliable is the fact that his knowledge of it is practical. It has not been gained from hearsay nor from desolatory visits made now and then at certain favorable seasons of the year, but from steady living there through the long summer days and the long winter nights year in and year out for 15 years, where he now owns the best mining claims on the Klondyke and its tributaries.

In presenting his book to the public we do so knowing that it is by an authority on the subject of which he writes. His first work entitled

"KLONDYKE NUGGETS"

is a brief description of the new gold regions, and anyone desiring authentic information should not fail to avail themselves of our

NOMINAL OFFER,

which places the facts in the possession of our customers. REMEMBER, that our office is the sole distributing point for this locality, having closed exclusive arrangements with Mr. Ladue's publishers.

The cover of the work is beautifully printed in red and gold, the gold showing one of the author's nuggets as clearly as it is possible to reproduce it on paper.

It is easy to secure a copy of "KLONDYKE NUGGETS."

Compon for "Klondyke Nuggets."

Cut out this coupon and bring it with you as evidence that you are a reader of *The Examiner* and Ten Cents in cash and a copy of "Klondyke Nuggets," by Joseph Ladue, the Bonanza King of new gold regions, will be handed to you.

Cut out this coupon and send it together with 12c. in stamps for clerical work and mailing expense, and we will send a copy of "Klondyke Nuggets" to your address. Write very clearly and give your name and address in full.

Remember, you should not delay as you will be unable to secure this valuable work on the gold region in any other way. Call at our office or address

The Examiner, Charlottetown.
