

FREDERICTON, Sept. 3 (CP)—Heavy rain forced postponement until tomorrow of the Labor Day harness racing card originally scheduled for today's opening program of the Fredericton Exhibition.

MANILA, Sept. 3 (AP)—Huk guerrillas blocked the main highway to Northeastern Luzon for four hours Sunday and killed a woman and a child on one of the 20 buses caught in the trap, the Philippine army reports today.

SHOOTING TIPS FOR BEGINNERS

This autumn as usual, a new crop of novices will be taking their first hunting trips. The beginner states Henry P. Davis (Remington Arms Company, Inc.), should first acquaint himself with the rules of safe gun handling and make them the leading factor in his conduct in the field.

With practice a gunner can easily learn to place the gun on his shoulder in such a position that when he looks along the top of the barrel the gun is aligned on the target.

The knack of quickly snapping the gun to your shoulder in a comfortable position is best acquired through "dry-shooting." This merely consists of quickly placing the UNLOADED gun to your shoulder and aligning the barrel on a target, WITHOUT taking your eye off of the target. When you think you are "on" the target, check your aim by closing the left eye and sighting down the barrel with your right.

It will be well to practice this time and time again before a mirror. This will allow you to see that the gun is well up on your shoulder, your cheek is held tightly down on the stock and your head is not too high. If you can see a good portion of the front part of the barrel, you are holding too high and the shot would pass over your target.

In pointing at a moving target with your unloaded gun, always swing a bit ahead of it before pulling the trigger. And be sure to follow-through with your swing after the hammer falls. You cannot hit a moving target by shooting straight at it. Shooting behind the target is a very common error, and it is generally caused by stopping the gun or failing to follow through.

A novice, however, should take his time and not rush his shots. It is better to wait too long and know what you're doing than to blaze away and trust to luck.

And here are just a few more important tips of especial interest to beginners.

Learn and observe the rules of safety.

Try out your gun before going afield.

Observe the game laws.

Ask the landowner for permission to hunt on his land.

Get an experienced hunter to go with you.

Take prompt and proper care of the game you shoot.

One Mile Relay—1, Antigonish. Time: 4:03 4/5.

"GASMASTER" SALES ZOOM!
Features:
1. REDUCED GASOLINE CONSUMPTION
2. IMPROVED ENGINE PERFORMANCE
3. EASIER STARTING IN COLD WEATHER

USERS REPORT 10% to 30% GASOLINE SAVINGS
R. C. McDonald, Chief, London Fire Department: "We have installed Gasmasters on the official Chief's car (1950 Pontiac) and the Deputy Chief's car (1942 Pontiac) the Emergency car (1946 Ford) and the Maintenance truck (1949 Ford). The improved performance is a source of great value to us where our vehicles have to respond from a cold start to peak performance in a matter of seconds. Improved mileage is another benefit which we find a great advantage as our cars seldom get outside city limits."

SO EASY TO INSTALL
LASTS THE LIFE OF YOUR CAR
Beware of Imitations
Ask for and get the Gasmaster "Gasmaster" Guaranteed not to have valves
The "Gasmaster" (Distribution Recifier) is fully patented. It was developed through government research during World War II and it has been re-engineered for use on all makes of automobiles, trucks and motorcycles. The full advantages provided by the "Gasmaster" cannot be duplicated by any other device. Valves are the producer of the world's largest range of filtration equipment installed on aircraft, naval ships, tanks, trucks, cars and motorcycles.

Aerodynamically speaking—safe flight is assured by RCAF airframe technicians

It's not the engine—it's the wings that lift a plane.
At 600 miles an hour, airflows over wing and control surfaces with tremendous force. A broken surface would cause a whirlpool—break the airflow—destroy the lift—make flight impossible.
That's why all RCAF planes are daily inspected, rigged and trimmed by skilled Airframe Technicians... wings... flaps... ailerons... elevators... rudder... dive brakes... landing gear...
Whether it's an F-86 Sabre fighter or a big North Star, every RCAF plane must have an official okay from the Airframe Technician before it may take off—officially okayed for safe flight, from nose to tail.

To be eligible, you must... be between 17 and 40... be physically fit... have Grade 8, education or better

These skilled trades are open:
AIR FRAME... AERO-ENGINE... RADIO-RADAR... INSTRUMENT... ARMAMENT... AND SUPPLY
