

A Feature for Every Friday— Among The Farmers

Federation Of Agriculture News

Potato Meetings

The attention of potato growers is called to notices in the press announcing meetings for the purpose of giving information of the potato agreement and pools, to be operated under the authority of the P.E.I. Potato Marketing Board.

These meetings are being sponsored by the Federation of Agriculture and will be held at Morell on October 5, Summerside October 7, Charlottetown October 9, in Prince of Wales College, all meetings at 8 o'clock.

These meetings are for the express purpose of giving farmers information which will assist them in deciding whether or not they wish to market their crop under the Agreement. It is important that so far as possible all districts are represented, that farmers come prepared to raise questions, and further that all Federation Directors attend in order that they be in a position to discuss details intelligently when approached.

Nuffield Scholarships

Once again we are able to announce that the Nuffield Federation is again offering to Young Canadian farmers two scholarships for Agriculture study in Europe. Farmers between 25 and 35 years of age (some latitude may be allowed here) who are interested in such an opportunity should immediately contact the Federation office for further information and application forms.

It will be recalled that William C. Cairns of Freetown, was the selection for Eastern Canada last

year and Mr. Cairns will no doubt be in an excellent position to provide prospective applicants with information upon the value of the training received.

\$20,000 Per Worker

American experts have arrived at the conclusion that an investment of \$20,000 is required in land building and equipment for each worker employed in Agriculture as compared with \$15,000 for each factory worker.

Some years ago the investment was higher in industry per worker than in agriculture, but gradually the situation has been changing and these figures indicate that the farm operator must cope with a heavy capital investment, a condition which tends to decrease the possibility of operation at a profit.

Storage Beef

Certain interests have circulated the statement that present low Beef prices are the result of the Dominion Government offering its frozen meats to the trade at prices tending to depress the market.

The Deputy Minister of Agriculture, J. G. Taggart, in discussing this matter stated that the Government had confined its use of such meat to supplying the armed forces and in releasing experimentally to the trade a few thousand pounds to see how it would be handled.

The Government has about 10,000,000 pounds of meat in storage and at the moment has no intention of dumping it upon the market," said Mr. Taggart.

The Harvest

Harvesting this years bumper grain crop has turned into a pro-

Strange But True

By F. H. MacArthur

2,300 years ago Herodotus reported gold digging ants in the Indus Valley in the Himalayas. Of course nobody believed the story about the ant gold miners. But old Herodotus was right. To prove it we have the word of a Danish expedition to that region. The scientists not only found the ant mines but also gold dust much of which however had been carried away by the ants.

The wild dog of Australia cannot bark, but gives up a dismal sounding howl. There's nothing green about Greenland. The country is a land of ice and fire.

Strange but true, fortune and misfortune, good luck and bad luck, come in cycles which when studied, presents many strange and mysterious facts. Let me give you some. Deaths from heart disease reach a peak within a 96-year period. Insect, fish and animal life is influenced also by the 96-year cycle.

Salmon, smelts and some other fishes run the gamut from scarcity to plenty in this schedule. All fur-bearing animals increase and decline in 96-year cycles. In searching through their records from 1725 to the present time, the Hudson's Bay company, one of the world's largest dealers in furs were amazed by the regularity of this fluctuation. They found that the 96-year cycle had been occurring on schedule throughout the company's long and colorful history.

Certain insects such as tent caterpillars and Chinch bugs reach peak proportions in 96-years!

We all know that real estate activities has its cycle too. This is supported by reliable data gathered for the past 150 years and known as the 183 year cycle. But industry as a whole follows a 64-year rhythm.

The pattern we all follow in life was laid down when the world was young. Nothing is new. Scientists are only now rediscovering the amazing cycle pattern and making it work in many fields of human activity, and in the not too distant future we may be able to lay our plans in the future with every assurance of success. On the basis of his study of tree predation, in 1939, the great flood that swept the U.S.A. in 1942.

Weather, too, moves in well defined cycles. For many years the Smithsonian Institute had been charting a cycle in a solar radiation which revolved in a 22.7 time period. They predicted the really bad weather of 1945. Mankind is not reaching the end of knowledge, wisdom and progress. Each generation makes a new rent in the veil that shrouds

Baptist District Meet At Hazelbrook

Gracious hospitality was extended by the Hazelbrook Baptist Church to the District Meeting, which convened in their church on Tuesday. The Hazelbrook Church are at present without a pastor, but notwithstanding this handicap, they rallied round and their hospitality was boundless.

At the morning session the report of the Key Man, Rev. C. A. Britten was heard, also a report on Evangelism by Mr. Heber Macleod, a report on the Bible school near Moncton by Rev. W. G. Killam and "Echoes of the Convention" by Rev. Harry Barber. Rev. Fred Gordon gave an address on "The Rural Church" at the morning session, and Rev. Reginald Dunn spoke on Acadia and extended greetings.

The afternoon meeting, after a short business session of the main gathering was given over to the Women's Missionary meeting. This meeting was opened with a beautiful devotional service led by Mrs. Harold Carver of the Hazelbrook Church, assisted by other ladies of her society. At the afternoon session Rev. Donald MacClare rendered a beautiful solo, and he also led a song service at the beginning of the evening service.

At the evening service there was an impressive memorial service for Mrs. Harry Barber and Rev. Joseph Chisholm, conducted by Rev. C. A. Britten and Rev. J. D. Davidson, with prayer by Rev. W. G. Killam. At this service also, Rev. Fred Gordon gave an address on the five-year program.

was Governor of Egypt, how he commended the people to save food during the 7 fat years to tide them over the 7 lean years?

Still another evidence of the cycle mystery. Every 65 years to the day the Kurile Islands blow up in a terrific volcanic eruption. As yet we know nothing about the origin of these mysterious cycles. Yet scientists have been able to chart them down through the ages. They know for example, that 20 consecutive years plague would strike Bombay, India, every one year and 4 days to the day. Why? nobody knows the answer.

Any newspaper editor can tell you that crime comes in cycles, that more major crimes are committed during the summer months, that crimes against poverty are more numerous in winter. Police records tell the same old story. When scientific cycling becomes an everyday affair we will always know what lies in the future and be prepared to meet any emergency, be it war, disease, quake or flood. Mankind is not reaching the end of knowledge, wisdom and progress. Each generation makes a new rent in the veil that shrouds

the future. Mankind lifts the veil and lo new horizons stretch out in seemingly endless spaces before his astonished gaze. Some day we will be able to predict the future. Research into cycles will bring this about, not in the distant future but before this generation has passed away. Up until 40 years ago the travelling light was a familiar sight on the Jewell Road which leads off the Kingston highway and comes to a dead end on the Vickerson farm, North River. The light always came from the direction of Stevenson's woods, followed a line fence to the highway, then turned right and disappeared somewhere in the hollow where a little brook flows on its way to join Warren's Mill dam.
