

THE WAR-TRAIL!

CHAPTER XL (CONTINUED).

As to the time we were left to conjectures. It might be before morning's light—it might not be before late in the following day or even the night after.

But what of thirst and hunger, you will ask? Ha! we dreaded not either. Fortune's favors had fallen upon us in showers. Even on that lone summit, we found the means to assuage the one and satisfy the other!

In crossing the table-top, we stumbled upon huge echinocacti, that grew over the ground like ant hills or gigantic beehives. They were the mammillaria of Quaquebuss—dome-shaped, and some of them ten feet in diameter.

With similar facilities were we enabled to gratify the kindred appetite. As I had conjectured, on viewing them from the plain, the trees of light-green foliage were "pinon"—the "nut pine" (Pinus edulis), of which there are several species in Northern Mexico, whose cones contain seeds edible and nutritious.

No wonder, then, that with such a supply for the present, and such hopes for the future, we no longer dreaded the impotent fury of our foes.

We lay down at the top of the gorge to watch their further movements, and cover our horses from their attack. The flash of the lightning showed them still on guard, just as we had left them. One of each file was mounted, while his companion, on foot, paced to and fro in the intervals of the cordon.

The lightning began to abate, and the intervals between the flashes became longer and longer.

During one of these intervals, we were startled by the sound of hoof-strokes at some distance off; it was the tramp of horses upon the hard plain.

This we ascertained only by hearing, for we could not distinguish an object six feet from our faces—the darkness was almost palpable to the touch.

The sounds came from a considerable distance, but we could tell that the horsemen were advancing toward the mesa.

We drew no hope from this advent. Rahe could not yet have even reached the rancheria. The new-comers were El Zorro and his companion on their return.

We were not kept long in doubt; the horsemen approached and shouts and salutations were exchanged between them and the guerrilleros, while the horses of both parties neighed in response, as if they knew each other.

At this moment the lightning shone again, and to our surprise we perceived not only El Zorro but a reinforcement of full thirty men! The tramping of many hoofs had half-prepared us for the discovery.

It was not without feelings of alarm that we beheld this accession to the enemy's strength. Surely they would no longer hesitate to assault our fortress behind the rock? At least our horses would be captured. Besides Rahe's rescue might be too weak for such a force. There were nearly fifty.

Our anxiety as to the first two points was soon at an end. To our astonishment, we perceived that no assault was to be made as yet. We saw them increase the cordon of sentries, and make other dispositions to carry on the siege. Evidently they regarded us as hunters do the grizzly bear, the lion, or tiger not to be attacked in our lair.

They dreaded the havoc which they well knew would be made by our rifles and revolvers; and they determined to reduce us by starvation. On no other principle could we account for the cowardly continuance of their revenge.

MORE LIGHT!

THE Charlottetown Gas Light Company have imported some of "BAY'S" Burners, which they will supply and fit on Gas Burners, etc., at a moderate cost to consumers.

These Burners are reported to be the best Flat Flame Burner yet produced, and will give a far greater amount of light than any other Burner with the same consumption of Gas.

Dr. Wallace, F. R. S. E., F. C. S., Gas Examiner to the City of Glasgow, in a lecture delivered by him, calculated that £100,000 (\$650,000) a year are thrown away in Glasgow by the use of imperfect fittings.

The report of the Committee of the British Association of Science to enquire as to the best means for the development of light from Coal Gas of different qualities—comprising Dr. William Wallace, Professor Dittmar, and Mr. Thomas Wills, F. C. S., F. I. C. E., showed that Bay's Burner yielded the greatest amount of light of all the two or three scores of Burners reported upon which included all the Burners of repute in the market.

In a pamphlet upon Light and Heat, published by R. B. Taor, A. M., he says: "The cost of Gas as compared with other illuminating agents is much more economical when rightly used, than many suppose. From experiments made for this purpose, the following results have been obtained. They were made by burning samples of Devco's Brilliant Oil and ordinary Oil, and testing their illuminating power. It was found that Coal Gas costing one cent at \$3 per thousand feet, gave a light equal to 18 candles, while Devco's Brilliant Oil consuming 27.4 grammes costing half a cent, gave a light equal to 9 candles.

"A good Argand or Johnson's Burner, the Burner used in the last experiment, will therefore give the light of 2 ordinary Oil Burners in direct comparison, at no greater expense in the case of the first and superior grades of Oil. Lights, however, on the authority of scientists, are not to be compared in direct proportion, but in proportion to the squares of their powers, and such a comparison with the case of the use of gas, its cleanliness, freedom from odor and odors, renders its use desirable wherever it can be introduced."

As the above experiments were made with Gas at \$3 per 1000 feet, and not consumed through Bay's Burners, it will readily be seen how much more economical it is to consume Gas instead of Oil, when its price is only \$2.63 per 10.0 feet as now charged here when consumed, more especially through Bay's Burners.

Messrs. Goodwin & Co., of Philadelphia, the well-known manufacturers of Scientific Instruments for testing the illuminating power of Coal Gas, etc., say in their Circular to Gas Companies: "In presenting the Bay's Standard Patent Six Union Burners and Lanterns, for which we are the sole Agents in the United States, to the attention of the public, we are convinced that we are fitting a want long felt." They further add: "The yield of light from these Burners is 12 to 20 per cent greater per cubic foot of Gas consumed than that from any flat flame Burner hitherto introduced." (No 4 eod)
