ABSOLUTE PURITY.

THE following analyses (made by the Dominion
Analysis) of three BAKING POWDERS
sold in this market should put a stop to the
unjust efforts of the Royal to mislead the public
as to its being the only pure Powder. These im-
portant tests show that other Powders are as pure
and wholesome as
W. SAUNDERS, Dom. Analyst, St. John, N. B.
reports:
Royal—Contains Alkaline Carbonates—a mixture
consisting mainly of Bi-Carbonate of Soda
and Cream of Tartar—adulterated with about
20 per cent. of starch.
W. F. BEST, Dom. Analyst, St. John, N. B.,
reports:
Pure Gold—Contains Cream of Tartar, Carbon-
ate of Soda—fresh and pure.
Nov. 19, 1882—Not adulterated;
same as usual.
June 4, 1881—Fresh and pure;
same composition as usual.
MAYNARD BOWMAN, Dom. Analyst, Halifax,
N. S., reports:
WOODILL'S Of good quality; contains nothing
injurious.
WOODILL'S German Baking Powder held a
reputation for purity and wholesomeness now
nearly 30 years.
May 21, 1885.

AMINER office. feb27

Royal Arcanum.

From the reports made to the Supreme
Council, now in annual session at Philadel-
phia, we glean facts of interest to members,
not only of the Royal Arcanum, but of all
other fraternal insurance societies. Those
not in this society may not know that
assessments are levied on the graded plan,
every member paying according to the age
at which he was admitted. The order was
organized June 25, 1877. Last year the
membership averaged 56,996. The aver-
age age at which members were assessed,
and so at which they joined the order, was
a little over 34 years. One assessment
brought in a little over \$100,000. Death
payments are either \$3,000 or \$1,500,
mostly the former. The death rate per
1,000 during the year ending February 28,
1885, was 7.34; during the ten months
ending January 1, 1886, it was 6. It
would seem that the average age of mem-
bers joining is being lowered, showing that
more young men are joining. In ten
months the order paid a little over \$1,000,
000 in death benefits. In 1885 the month
of April led in number of deaths with 48;
February was second, with 44; September
was last, with 27; total in the year, 429.
Virginia leads in the mortality rate with a
rate of 13.3 per 1,000. Massachusetts
stands eleventh, with a rate of 6.15 per
1000. Classified as in former years, the
per centage of the various forms of disease
is as follows:—

Classes.	No. of Deaths.	Per centage.
Zymotic.	38	10.7
Tubercular.	60	14.9
Brain or spine.	51	14.4
Heart and circulatory system.	38	10.7
Lungs (excepting consumption).	35	9.9
Digestive organs.	45	12.8
Kidneys and urinary organs.	26	7.3
Casualties.	21	5.9
Suicides.	13	3.7
Unclassified.	16	4.5
Total.	355	100.2

At this Supreme Council session, it is re-
ported, several important changes will take
place affecting both the constitution and
ritual.

The Royal Arcanum will soon enter upon
its tenth year of existence, having been
organized since June 25, 1877, having had
eighty-three assessments, an average of
nine per year. On June 1 the membership
of the entire order was about 65,000.
There is no doubt that Massachusetts will
have 10,000 December 31, 1886, having at
the present time about 9,000.

The above Society has a good member-
ship in Charlottetown, and persons wishing
to join would do well to apply to any of its
members, and have an application filed up.
There have been two deaths among its
members here, and the claims have been
promptly settled.

Maritime Athletic Association.

The Halifax correspondent of the Cana-
dian Athletic News writes: "An agitation,
emanating from Pictou, is at present being
made towards the formation of a Maritime
Province Amateur Athletic Association. This
subject has been often mooted, but the
honor of taking the first step in this laud-
able direction belongs to John Stewart,
Esq., M. P., of Pictou, an ardent athlete,
who undertakes the correspondence necessary
to set this ball rolling. I feel sure that
the project will be well received by the
clubs throughout the Provinces, and I hope
that this autumn may see the first meeting
of the new enterprise. This would certainly
impetus, and should the scheme not be
found practicable for all three Provinces,
I, for one, would strongly advocate the
formation of a similar Association for Nova
Scotia alone."

Origin of Man.

As regards man's ape descent, the for-
mation and proportions of the skull and
bones of the ape considered most like man
are found to be so different from those of
man as to place insuperable difficulties in
the way of the theory. In the gorilla, the
high crest on the skull, which was also
found in the hyena, is absent in man. Also,
among other points, if the capacity of the
brain of the anthropoid ape be taken at ten,
that of man even in his savage state was
twenty-six, or nearly three as much, a very
important fact when, as it is known, any
appreciable diminution in the brain of man
was at once accompanied by idiocy. As re-
gards the transmutability of species, Bar-
rard's arguments against the theory, founded
on the results of a life of research among
the fossil strata, had not yet been
overthrown; and modern research clearly
pointed to the fact that, one great bar to
the transmutability of species lay in the
ruined and minute differences in the
molecular arrangement in their organs.

The Mule in a New Role.

A special to the New York Herald from
Avignon says that a large black mule, bit-
ten a few weeks ago by a mad dog, was
seized Thursday morning with rabies and
caused a panic in the city. The beast at-
tacked its owner, biting him on the head
and seizing his hand with its teeth. He
dragged the man 200 yards until the hand
was nearly severed from the arm, and then
charged through the streets attacking every
person and every object he met. All the
inhabitants took to flight, and for half an
hour the brute remained the complete mas-
ter of Avignon. Five peasants who tried
to escape from the market place were badly
bitten on the legs and back. One of them
who took refuge on a lamp post had his
foot nearly bitten off. A square of gen-
darmes finally killed the beast. All the
wounded will be sent to Paris to be inocu-
lated by Pasteur.

A Doubly Good Work.

All people who eat are indebted to the
Royal Baking Powder Company not more
for having perfected and prepared a leaven-
ing agent that is pure and wholesome be-
yond a question than for its exposures, so
boldly made, of the numerous impure,
adulterated and injurious articles that are
sold under the name of baking powders,
bread preparations, etc., in this community.
In making these exposures the Company
has, of course, made itself the target for all
sorts of counter attacks, but the animus of
these attacks has been perfectly understood
by the general public, and by their very
violence have served to more properly call
attention to the good work of the "Royal"
Company.

Food frauds of the usual class, such as
wooden nutmegs, chicory coffee and
watered milk, although they are swindles
in a commercial sense, are often tolerated
because they do not particularly affect the
health of the consumer. But when an
article like baking powder, that is relied
upon for the healthful preparation of
almost every meal, is so made as to carry
highly injurious if not rankly poisonous
elements into our daily food, it would seem
to be the duty of the press as well as of the
criminal authorities to take cognizance
of it.

In the fight for pure food made by the
"Royal" Company some time ago, when
its gums were particularly trained against
the alum baking powders, it was noticed
that the most trustworthy scientific authori-
ties were emphatically upon its side. So in
the recent contest with the lime and other
impure baking powders the result has
proved that every statement made by the
Royal Baking Powder Company, both as to
the purity of its own and the adulteration
of other baking powders of the market,
was fully authorized by the most competent
chemical and medical authorities of the
country.

In this contest two facts have been pretty
conclusively settled in the minds of the
public—the first, that the Royal Company
has found the means, and uses them, to
make a chemically pure article of food, and
the other that the average baking powder,
no matter how strongly endorsed by "com-
mercial" chemists, is an exceedingly doubt-
ful preparation.

Pure baking powders are one of the
chief aids to the cook in preparing perfect
and wholesome food. The recent "contro-
versy" in the press has left it no longer a
question with those who desire purity and
wholesomeness of food what baking powder
they shall use.—Montreal Star.

Recent Exploration and Scientific Investigation.

The Director of the Geographical Survey
of Ireland, Professor Hall, F. R. S., de-
livered the Annual Address of the Victoria
(Philosophical) Institute in London, on the
28th of May. He gave an account of the
work, discoveries, and general results of
the recent Geological and Geographical
Expedition to Egypt, Arabia, and Western
Palestine, of which he had charge. Sketch-
ing the course taken by him (which to a
considerable extent took the route ascribed
to the Israelites), he gave an account of
the physical features of the country, evi-
dences of the old sea margins, 200 feet
above the present sea margins, and showed
that at one time an arm of the Mediter-
ranean had occupied the valley of the Nile as
far as the First Cataract, at which time
Africa was an island (an opinion also arrived
at by another of the Institute's members,
Sir W. Dawson), and that, at the time of
the Exodus, the Red Sea ran up into the
Bitter Lakes, and must have formed a bar-
rier to the traveller's progress at that
period. He then alluded to the great
changes of elevation in the land eastward
of these lakes, mentioning that the waters
of the Jordan valley once stood 1,202 feet
above their present height, and that the
waters of the Dead Sea, which he found
1,050 feet deep, were once on a level with
the present Mediterranean sea margin, or
1,202 feet above their present height. The
great physical changes which had taken
place in geological time were evidenced by
the fact that whilst the rocks in Western
Palestine were generally limestone, those of
the mountains of Sinai were amongst the
most ancient in the world. The various
geological and geographical features of the
country were so described as to make the
address a condensed report of all that is
now known of them in Egypt, Palestine,
and Arabia Petrea.

The Lynx Catch.

The catch of lynx during the past winter
has been altogether unprecedented as well
as the prices realized. The catch must
have reached 20,000 or 25,000. The price
has ranged from \$3 to \$6 while \$2 was al-
ways before considered a high price. The
large catch and high price have made the
fur hunt and trade very profitable. Lynx,
or cats as they are sometimes called, live
chiefly on rabbits and increase and decrease
in numbers with the latter. It is more
than likely that next year's catch will be
very small, as of course the high price has
caused them to be hunted with more per-
sistency than ever before and they are not a
particularly difficult animal to hunt and
kill. Lynx fur when plucked, shined and
dyed supplies a very large proportion of the
South Sea seal which appears on the
market. The coarser hair is made up into
fine felts. It is never sold under its own
name except for overcoats or robes. The
Canadian Northwest is the principal source
of supply of lynx fur.

Scott's Emulsion of Pure

Cod Liver Oil, with Hypophosphites

Is more reliable as an agent in the cure of
Consumption, Chronic Coughs and Emacia-
tion, than any remedy known to medical
science. It is so prepared that the potency
of these two most valuable specifics is large-
ly increased. It is also very palatable.
