THE DAILY EXAMINER

THE LEADING DAILY NEWSPAPER OF P. E. ISLAND.

Is issued every afternoon, from the office of THE EXAMINER PUBLISHING COMPANY, in the London House Building, Queen Street.

RATES OF SUBSCRIPTION.
(IN ADVANCE)

ONE YEAR	$4.00
SIX MONTHS	2.00
THREE MONTHS	1.00
ONE MONTH	0.35

Sent post paid to any part of Canada or the United States.

ADVERTISING RATES.

For small advertisements which are ordered for only one or two weeks the charge is 50 cents per inch for the first insertion, and 2 cents for each continuation. Rate cards are furnished on application at the office. Special contract prices at a reduced rate are quoted for advertisements four inches in size or larger, which are to run for three months or longer.

No special notices inserted unless paid for at the rate of 10 cents per line, and under no circumstances will such paid notices appear in the local column.

Special discounts made on all advertisements connected with Church Fairs, Bazaars, Picnics, etc. No notices will be inserted with the same unless the regular rate of 10 cents per line is paid.

That THE EXAMINER is considered by our Merchants and Manufacturers to be the leading newspaper in P. E. Island, and consequently the most valuable advertising medium through which to make their announcements public, is abundantly proved by the fact that in order to accommodate our advertisers we have been compelled to enlarge the paper to its present size.

THE DAILY EXAMINER is for sale by the following agents :—
R. H. Mason, Post Office, Charlottetown
J. McIntyre Malpeque Road, "
C. Paul, Lower Spring Park Road, "
W. M. Coffin, Grafton Street, "
E. Grey, cor. Water and Prince St. "
D. Chappell, Prince Street, "
Bazaar Store, Queen Street, "
Geo. Carter & Co., Queen Street, "
S. Gray, News Stall, P. E. I. Railway and on the trains.

AGRICULTURE IN CANADA.

Interesting Lecture Delivered at Chicago by Prof. Saunders.

A Lengthy and Correct Description.

Inexhaustible Resources of the Country.

The Dominion of Canada is rich in minerals, has most extensive timber resources, inexhaustible fisheries, and flourishing manufactures, yet it is essentially an agricultural country, and in almost every district all business prospers or suffers as plentiful or scanty crops are realized by the farmers. The food products raised supply a large and increasing population and leave a considerable surplus for export. A good farm in all the older settled districts is an asset, the solidity of which is unquestioned, and on its security advances can always be obtained. Indeed, it is univer-ally conceded that farmers and their produce are the mainstay of the country. This being the case, it is highly important that farming should be intelligently conducted, so that the land may be made to produce the best possible results for the labor bestowed upon it.

Probably no other calling requires such varied knowledge in order to carry on the work on the work to the greatest advantage, and certainly no other occupation includes within its ranks so many poorly informed workers. From the outset the new settlers have always included many men who have failed in various other callings have resolved to take up farming without any previous training, and the fact that so many inexperienced men have been successful as farmers both in Canada and the United States affords one of the strongest proofs of the advantages these countries offer for agricultural pursuits.

It follows, as a matter of course, that where it is possible for men without previous experience to be successful in any calling, that man who brings to bear on his work a trained body and a well-informed mind is likely to achieve a much greater success. A fertile soil is, however, a most important element in successful farming, without which the best-informed and most industrious farmer will be placed at a most serious disadvantage, for the stores of fertility which nature has provided in the soil are the most important items of his stock in trade, a reserve which he may draw upon, with proper precautions, to a very considerable extent. In this particular Canada is much favored, having wide areas of the most fertile land. Even in the older settled districts where, under the crude notions of early times, the most wasteful system was common, much of the soil now under more intelligent management yields excellent returns.

No well-informed person will undertake to question the fact that the United States is a great country, with marvellous resources, among the most important of which are those of an agricultural character. Notwithstanding that in many of the States there are large areas of poor or waste land, the general characteristic of the great Republic in this particular is one of great fertility. In this respect Canada makes a very good comparison. The estimated returns of many years give the average wheat crop of the United States at 42.8 bushels per acre, while that of Canada for the same period stands at 14.6. Barley in the United States averages 21.4 bushels per acre, in Canada, 24.7. Oats in the United States average 25.1, in Canada 26.7 bushels per acre, showing that the Dominion leads in these most important cereal crops. The quality also of the grain produced in Canada is excellent and the area of land within the boundaries still unsettled, which is favorable for grain growing, is enormous.

No one who has carefully examined the exhibit which Canada has made at the Agricultural Building of the great World's Fair, will have failed to notice the many excellent samples of cereals grown at very widely distant points. Every province and territory is represented, from Prince Edward Island on the Atlantic to British Columbia on the Pacific, and the products do credit to the country throughout. But to many the greater surprise has been to see such magnificent grain, so plump and hard in berry and so clean and bright in straw, from the great Northwest plains of Canada, grown at all points, from the United States boundary away northward 300 miles to the thriving settlements of Prince Albert and Edmonton, and still further north to the Peace River country at points from 700 to 800 miles north of the boundary.

Many erroneous ideas are prevalent regarding Canada, not only among the residents of distant countries, but also among intelligent and well-read people in the United States. Very recently I read an editorial in one of the leading Chicago daily papers in which some criticisms were indulged in, regarding statements made by Sir Oliver Mowat, the Premier of the Province of Ontario, in a speech he lately delivered in Chicago. This worthy writer thought that Sir Oliver was drawing largely on his imagination when he portrayed the resources and the dimensions of the Dominion and he undertook himself to bring the soarings of that eloquent speaker down to what he supposed to be the level of hard facts. He was willing to admit that Canada had a good deal of country but by far the greater part of it was worthless, and in particularizing he remarked that proceeding northward from Ottawa there were 1000 miles of swamp and desert until you reached Winnipeg and that beyond this there was a strip of habitable land along the United States boundary, but that very little was known of this region or of its fitness for human habitation. When a man who assumes to be a light in the intellectual firmament of this country shows himself so ignorant of the character and quality of the domain possessed by a near neighbor, I may perhaps be excused for devoting some portion of the time at my disposal on this occasion in presenting some facts regarding the sections of country referred to over which it has been my privilege to traverse twenty times during the past seven years with the special object of studying their agricultural possibilities.

Professor Saunders here presented a description of the great Northwest, as seen, for the most part, by himself, in refutation of the statement referred to, and proceeded to say :

Time would fail me to give particulars of the wonderful progress which Canada has made in the older settled Provinces in almost every branch of agriculture. In cattle raising, in which the value of the export trade has risen from less than one million dollars in 1875 to over seven and a half millions in 1892. In the cheese industry the development has been wonderful during the same period. In 1874 the value of this product exported was less than four million dollars. In 1892 it amounted to nearly twelve millions. Canada now supplies 46 per cent. of all the cheese used in Great Britain, and exports more of this commodity than the entire United States. Much attention is now being given to winter butter making, and it is found that by the use of more succulent food during the winter months a profitable flow of milk may be maintained for ten and a half to eleven months in place of from five to six months as formerly, thus materially increasing the profits of the farmer. With the extension of the cattle industry and dairying, involving the feeding of the coarse grains on the farm instead of shipping them to distant points, the fertility of the soil can be more easily maintained and more profitable crops generally realized from the working of the land. The farmers of Canada are, I believe, at the present time in better circumstances than the farmers in any other country in the world. Both the Dominion and Provincial Governments are doing much in aid of agriculture by the encouragement of farmers' institutes and other organizations of farmers, by the establishment of experimental farms and stations, by grants in aid of agricultural societies, dairy associations, associations for the encouragement of fruit growing and for the raising of stock and poultry.

Ontario has an excellent and well equipped institution for the practical training of farmers' sons in her College of Agriculture at Guelph, in connection with which is a dairy school and an experimental farm, where many useful experiments are made in many branches of agriculture. This province also votes large sums annually in aid of agricultural societies for the purpose of encouraging the holding of agricultural exhibitions in all parts of the province. It also makes liberal annual grants from the treasury in aid of the dairy associations, associations for improving the breeds of cattle, sheep, swine and poultry, to the entomological society of Canada, to enable it to carry out investigations regarding injurious insects. It also gives direct aid to farmers' institutes, and distributes freely the reports and publications of all these organizations.

The Province of Quebec votes every year about $50,000 in aid of agricultural societies and farmers clubs. Four agricultural schools receive annual grants from the Government. It also sustains a dairy school. The Government also gives direct aid to 28 syndicates of butter and cheese factories and provides for their regular inspection. It also makes annual provision for the payment of lecturers who deliver addresses to farmers on agricultural topics during the winter months.

Nova Scotia has a school of agriculture at Truro, where farmers' sons receive a practical training in their calling. This Province also encourages by subsidy the importation of improved strains of cattle and horses; it also gives material aid to the Fruit Growers Association of Nova Scotia and to the Dairy Association.

The Province of New Brunswick is doing much to aid the farmers by assisting in the establishment of creameries and dairies in different parts of the Province, and in providing competent instructors instructors to aid in this work.

Prince Edward Island has an experimental farm near the capital, Charlottetown, at which improved breeds of stock, horses, sheep and cattle are bred, and the products annually sold to farmers residing in the Province. Useful experimental work in field crops is also carried on at this institution. The Island Government also makes annual grants to assist agricultural societies and dairy associations.

In the Province of Manitoba the agricultural societies are materially aided by annual votes from the Provincial treasury. Farmers institutes and dairy associations also receive aid from this source.

In British Columbia the Provincial Government sustains agricultural associations for the purpose of holding annual exhibitions, an association for the purpose of fruit growing, and distributes much useful information bearing on the agriculture and horticuiture of the province.

The Dominion Government has from time to time adopted various measures with the object of promoting the agricultural interests of the country, among the most important of these being the establishment of the

EXPERIMENTAL FARMS.

The experimental farms of the Dominion of Canada are five in number and contain in all more than 3100 acres of land. They consist of a central farm near the capital, Ottawa, and four branch farms. The central farm has been established near the boundary line between Ontario and Quebec, and serves the purposes of both of these important provinces. One of the branch farms is located at Nappan, Nova Scotia, near the dividing line between Nova Scotia and New Brunswick and serves for the three Maritime Provinces, Nova Scotia, New Brunswick and Prince Edward Island. Another has been established at Brandon, Manitoba, for the Province of Manitoba. A third at Indian Head in the Provisional Territory of Assiniboia as an aid to agriculture in the Northwest Territories, while the fourth is located at Agassiz, British Columbia, where it serves a like purpose for the Province of British Columbia.

At all these farms, many experiments are in progress in all branches of agriculture, horticulture, and arboriculture and many problems of great importance to farmers have already been solved. In selecting the sites for the farms, due regard has been had to the great variations in climate in different parts of the Dominion, and they have been so placed as to render efficient help to the more thickly settled districts and at the same time to cover the most varied conditions which influence agriculture in Canada.

CENTRAL EXPERIMENTAL FARM.

The Central Farm has about five hundred acres of land, and a complete steading of buildings with residences for the chief officers. There are buildings for cattle, horses, pigs and poultry. There is also a dairy with all modern appliances for experimental work, a seed testing and propagating house and a conservatory. A chemical laboratory has also been established and thoroughly equipped with apparatus, and is worked by an efficient staff. The chief officers are a director, whose headquarters are in Ottawa, but who supervises and directs the work on all the farms; an agriculturist who conducts experiments with cattle and swine, also in dairying, and with various agricultural products. He also fills the important position of Dairy Commissioner for the Dominion. There is also a horticulturist who has charge of the extensive orchard and fruit plantations at Ottawa, and carries on experimental work with fruit and vegetables. A botanist and entomologist, who with the aid of an assistant, investigates the subjects of injurious insects, noxious weeds, and plant diseases occurring throughout Canada, and superintends the Arboretum and Botanic Garden, and a chemist and assistant chemist, who are engaged in chemical investigations in relation to crops and plant growth. In addition there is a poultry manager who takes charge of the poultry department, and a
