CLAUDE CRASWELL,
Auctioneer.

J. P. LANTZ,
Owner.

Agricultural News

F. E. I. Department of Agriculture

IS IT NEWS?

A man named Spallanzani, in 1780, was the first recorded person to use artificial insemination. This early work was done with dogs. It was not until the late 1880's that artificial insemination started to become popular amongst cattle owners in Europe and later in North America. So it is evident that artificial insemination is not new.

The first Co-operative Artificial Insemination Cattle Breeder's Association in North America was organized by the extension workers of the New Jersey State College of Agriculture, with the aid of the Holstein breeders of the state. This artificial breeding association began operation in May, 1936, with 102 members and 1050 cows enrolled. It is interesting to note that the first technician was Doctor J. A. Henderson, who is now head of the Department of Medicine at the Ontario Veterinary College, Guelph. By January, 1937, this association bred 3,449 cows. This is typical of the growth of artificial insemination in the United States and Canada. Last year in New Brunswick approximately 13,000 cows were inseminated.

A. I. IN P. E. I.

The Department of Agriculture has drawn up a programme for artificial insemination in the Province. A detailed study of several other centers in Canada has been conducted. It is felt that we can not justify our own bull set-up at the present time. In all probability, the whole outlook on artificial insemination will change in the next few years. As a matter of fact, great changes have been taking place in the last couple of years.

Bull semen can now be frozen at a minus 70 degrees centigrade and kept for a long period of time. In the future this could mean that we would be using only frozen semen. Under a programme of this nature, it would be possible to extend selective service to the herd owners. It also means that a much larger number of bull semen would be made available. At the present time, we will be using fresh shipped semen from the New Brunswick Artificial Insemination Breeding Unit.

CENTRAL BOARD

There will be a central board established to be known as the P. E. I. Central Artificial Insemination Board. It will consist of three members from the local unit, the three County Agricultural Representatives and the Director of Veterinary Services. It will be responsible for the Board to discuss and make recommendations to the Minister, for artificial insemination in the province.

ADVISORY COMMITTEE

The Advisory Committee will consist of three members appointed by the Minister, who will examine applications for inseminators, the books and records of local units and report to the Minister of Agriculture.

LOCAL UNIT

The local unit will consist of all paid up members in a given district. They will elect from their numbers nine directors, who in turn will elect a president, vice-president, and secretary-treasurer. This Board of Directors will be responsible for the efficient running of the unit and will conduct their own business.

NO. COWS REQUIRED

In order to have an efficiently operating local unit, it is necessary to have a minimum of 700 cows signed up. One of the first steps in organizing a district is for the interested parties to conduct a survey to determine the number of interested cattle breeders, and the number of cows which they wish to have bred artificially.

FEES

There will be an annual membership fee of \$1.00, which entitles the breeder to full services of the unit for that period. The service fee, as stipulated, shall not be less than \$4.00 per cow inseminated, and not more than \$5.00. The exact amount is to be determined by the local Board.

A service fee entitles the breeder to three services, if necessary. There is no charge made for mileage within the prescribed area of the local unit. No doubt the question arises as to how the amount of the service fee is determined. Out of this amount collected the inseminator has to be paid, and the transportation by air express, of the semen from Fredericton to Summerside or Charlottetown.

The Provincial Department of Agriculture will pay for the training of one inseminator for each local unit, the equipment for the inseminator — exclusive of the refrigerator, and will pay for the cost of the semen.

MEETING IN SUMMERSIDE

On Friday night, April 29th, a meeting was called at Howard's Restaurant in Summerside, of interested cattle breeders from Lots 16, 17, 19, 25, 26 and 37. The re-

Strange But True

By F. E. MacArthur

Some humans awaken at the same time each morning; some crabs change color at the change of the tides. Why? Because they and we are governed by physical forces connected with the earth's rotation.

The gadget may be likened to a mental clock which, if understood and fully used, could give man new control over his own life. An elephant can neither trot, nor canter what he does is actually shuffle along on his huge feet at about 15 miles per hour.

Linon is expensive because it is from which it is made is expensive to grow; and strange but true, you can only harvest a flax crop every seven years. During the other six years you've got to enrich the soil because the flax has bled it of its nourishment.

How much of the food value of milk does pasteurizing destroy? Only the tiny amount of vitamin G in the fluid. All the other important ingredients — including all other vitamins and minerals — are left intact.

When women count themselves to sleep, they are counting men instead of sheep.

Ship meeting House, in Hingham, Mass., built in 1681, is the oldest building in Uncle Sam's country which has been used continuously for public worship.

Automobiles more than five years old may not be sold for operation on public roads in the island of Bermuda.

The amazing leopard lizard with a body length of only 12 inches boasts a tail two thirds the length of its body. It can change its color and temperature. This creature runs on its hind legs, carrying its tail straight up behind its back like a flag-pole.

And strangest of all, the little beast eats its brothers and sisters with as much seeming relish as it gobbles down insects.

This peculiar reptile was discovered and named by scientists in 1850.

Believe it or not, but Sweden has recently added to her cabinet of Ministers of Home and Family Affairs. He is believed the new office is to guide Sweden's housewives in shopping, and to protect them from profiteers. That such a post could be advantageously added to our Canadian cabinet goes without saying.

Locke Road

—Mr. and Mrs. Joseph T. Gallant of Forest View was in G' Leary on Saturday, April 30th.

Louis Arsenault of Forest View, was in Duvar on Thursday, April 29th.

—Mr. and Mrs. Joseph T. Gallant of Forest View were visitors on Saturday night, April 30th at the home of Mr. and Mrs. Alban Arsenault, Howland.

Henry Perry of Charlottetown, on Sunday morning visited at St. Anthony's Church, Bloomfield. He was accompanied by his daughter, Margaret and son, Allan. On Sunday afternoon they visited relatives in Howland.

—Mr. and Mrs. Lorraine Gallant and family visited at the home of Mr. and Mrs. Firmang Perry on Sunday afternoon, May 1st.

—Mr. and Mrs. Newton Harris and baby of Springfield were visitors on Sunday afternoon, May 1st at the home of Mr. and Mrs. Truema Harris, Locke Road.

AN.

Alma Craswell.
Roll call for next meeting will be answered with an article for Auction Sale. The collection amounted to 70 cents. The next place of meeting is the home of Miss Cyrus Martin. The meeting closed in the usual manner. All joined in a sing song. Lunch was served by the hostess and a social hour was enjoyed by all present.

Nfld. Teachers Want Basic School Program

ST. JOHN'S, Nfld. (CP) — The Newfoundland Teachers' Association says there should be a basic foundation program of education in Canada and the federal government should help pay the cost.

In a brief to be presented to the Canadian School Trustees' Association, the association claims that until a basic education foundation is established, provincial problems will continue to vary with tax-paying ability.

The brief says Newfoundland has the highest proportion of schoolage children in Canada, but also the lowest per capita personal income to support all the schools.

"Within 10 years the amount that will have to be added to the present grant just to keep the standard of education at the present minimum for Canada is estimated in the vicinity of \$9,000,000. The provincial government is already spending on education at the rate of the fourth highest in Canada. The rest will have to come from taxes at the local level. This will mean local taxes for education at the rate of \$112 per year for every family in Newfoundland."

The brief says it would cost \$1,000,000 to train 1,800 Newfoundland teachers who are not up to Canadian minimum standards; and when they were trained it would cost an additional \$1,500,000 a year in salaries.

The brief suggested that either a "per pupil" grant or an "equalization" grant from the federal government would enable all provinces to establish a common foundation program.

A Country Garden

color and beauty for a long season. Zinnias in many varieties and colors, also marigolds, larkspur, nasturtiums and sweet alyssum for fragrance and a good edging all season. There are other annuals which should be sown in flats early in the season.

Now it is possible to buy good seedlings from a nurseryman of these annuals the garden will have color and beauty much earlier in the season. These annuals are snapdragons and ageratum also the lovely petunias. There are many more good annuals and it is fun to try some new varieties each year along with the dependable plants that have been grown for years.

Perennial seeds should be sown now for good-sized plants for next year's blooming, and there are many hardy perennials and biennials easily grown from seed. Delphinium, Poppy Iceland and Oenothera, Nepeta, Fragrant and lovely for the bees. It is used in England a great deal. Sweet William, Hollyhock, Pansies and Viola, Lupines, Thalictrum, Foxglove and many more good garden plants. Catalogs give lists of suitable plants for certain parts of a garden, shady and sunny.

It is not possible to do much gardening, a good skirt can be made at beautifying the home with window boxes and other plant tubs filled with geraniums or tuberous begonias. We have not mentioned the bulbs that we can tuck into the borders. Dahlias in bedding varieties in many lovely colors, Glads and lilies carry on with color when each year along with the perennials are finished for this season.

Then we have three wonderful perennials, hardy and increasing in beauty year by year. Peonies, Iris and Phlox, which must be bought by the plant. They will increase so that after a year or so they can be divided and it is possible to gather a nice collection. If you plan on having a garden for the first time, be sure to order your nursery stock soon, and here in the Province we have our own Memorial Nursery with many varieties of everything, especially of beautiful shrubs to choose from.

Girls

MORE PRIZES THAN EVER BEFORE

THE 1955 SINGER JUNIOR DRESSMAKING CONTESTS
