McKay Woolen Co., Bargain Corner.

Why Ordinary Light is Injurious in Smallpox Cases.

It has been demonstrated by many investigators that luminous vibrations of short wave-length are capable of producing an inflammation of the skin. It is therefore easy to understand that such actinic rays increase an inflammation already existing, as in the case of smallpox. With a view to remedying this source of trouble, Dr. N. R. Finson, of Copenhagen, has been making experiments in the keeping of smallpox patients in non-actinic light.

An Easy Way to Distill Water.

Distilled water can be made easily at home and be continually on hand for cooking, drinking and bathing. It is the only water that should be used upon the face, while for a drink for dyspeptics it is unequalled, causing no discomfort after it is taken. Take a tea kettle with a closely fitting cover and a gutta perch or lead pipe fastened to the spout.

How John Bull Got His Name.

Dr. John Bull was the first Gresham Professor of Music, organist of Hereford Cathedral and composer to Queen Elizabeth. John, like a true Englishman, traveled for improvement, and, having heard of a famous musician at St. Omer, placed himself under him as a novice; but a circumstance very soon convinced the master that he was inferior to the scholar. The musician showed John a song which he had composed in forty parts—telling him at the same time that he died all the world to produce a person capable of adding another part to his composition.

The Old Lady Knows.

A Methodist paper says that three brothers who were preachers made a visit to their mother. One of them said: "Do you not think, mother, that you ruled with too rigid a rod in your household? It would have been better, I think, that you used gentler methods." The old lady rose to her full height and replied: "Well, William, when you have raised up your good preachers as I have then you can talk."

PETERS, PETERS & INGS, Barristers, Attorneys-at-Law, &c.

Cameron Block, - - - Charlottetown MONEY TO LOAN. Frederick Peters, Q. C., Arthur Peters, A. Ernest Ings. mch7-2m (136)

WE WISH

all our friends to know that we are still on CONNOLLY'S WHARF, and intend remaining there for this year at least. We would strongly advise our Country friends not to kill their horses after coming long journeys, by hauling Lumber over bare streets, when they can come to this Wharf and load their sleighs so conveniently right on the ice, which they cannot do anywhere else. Good stock now on hand. LATHS, SHINGLES, BARIS and CEDAR POSTS galore.

JAMES BARRETT.

mch6 Connolly's Wharf.

PHOTOGRAPHY

Superior workmanship, refined finish and moderate prices combine to make these Photos the most satisfactory in Charlottetown to-day.

GEO. H. COOK

Corner Queen & Grafton Sts. Agencies Wanted.

Collections and purchases made. Advice re investments, etc., given by experienced party. Highest references. Correspondence prompt, and, if desired, confidential. Charges moderate. Address D. C., P. O. Box 2246, Montreal. 21 (36)—mch18

Success! To you, citizens, by your appreciation of my efforts, is due my success in the Furniture business. I am still laboring to please you. I am offering you the greatest assortment of Parlor Furniture ever exhibited in this city at splendid bargains, and no mistake. JOHN NEWSON, Charlottetown, March 24, 1896. THE BARGAIN GIVER.

The Best Is Always The Cheapest. If you are going to ride a wheel the best is none too good for you, and you will find that it is your advantage not to buy in haste, to repent ever afterwards that you did not wait till you had seen our new BICYCLE. FENNEL & CHANDLER, Charlottetown, March 23, 1896.

What we want of you--a call to see our magnificent stock of Cloths to suit all the requirements of the coming season, embracing all the newest makes in Tweeds, Serges, Worsteds and Trousings. A full line of the latest English and American Hats. Lowest prices, good workmanship, and best and latest styles guaranteed. JOHN MACLEOD & CO., Charlottetown, March 21, 1896.

Lobster Packers! I am prepared to contract for one pound and half pound Flats and one pound Tall Cans Lobsters 1896 pack, at the highest prices the markets will afford. Correspondence solicited. HORACE HAZARD, Charlottetown, February 27, 1896. 135

A GOOD NAME. Blessed in Tens of Thousands of Happy Homes. Paine's Celery Compound a Blessing to civilized Humanity. A good name untarnished by vice, evil or crime is blessed and honored whenever mentioned. It is like the refreshing shower that falls to cheer the parched and thirsty ground. The great and good name creates better and purer thoughts and aspirations, and tends to make mankind better.

Antiquity of Soap. Soap is not a modern invention. It is twice mentioned in the Bible, first in Jeremiah and again in Malachi. History tells us that more than 2,000 years ago the Gauls manufactured it by combining beech tree ashes with goat's fat. A few years ago a soap-boiler's shop was discovered in Pompeii, having been buried beneath the terrible rain of ashes that fell upon that city in 79 A. D. The soap found in the shop had not lost all of its efficacy, although it had been buried 1,800 years. At the time that Pompeii was destroyed the soap-making business was carried on in several of the Italian cities.

A Rat on Guard. The shrewdness and sagacity of aged members of the rodent family have been demonstrated in numerous instances, but an incident recently witnessed by Supr. Tyler of the City Hall is worthy of remark. The yard of a house adjoining a stable on 17th Street, above Fairmount Avenue, has been infested with rats for a long time, and a few days ago a member of the family set a large wire trap in the yard. Mr. Tyler was seated in the rear room of a City street house and watched results with great interest. First one rat scuttled across the grass and took an observation. In another minute a dozen little rats came trooping along with evident intention of sampling the cheese. Just then a lean, long, gray old rat, with his tail chopped off, probably from a previous experience with traps, appeared and chased all the little rats away. The old fellow kept watching a single rat, young or old, from entering the trap.

Good company and good discourse are the very signs of virtue.—Isaac Walton. A woman's lot is made for her by the love she accepts.—George Eliot.

Early Rising as a Cause of Insanity.

An English medical journal some time ago showed cause why early rising, instead of being a virtue, as unscientific moralists have taught, was really a mischievous delusion, condemned by sound physiology, as well as by the natural instinct of mankind. Dr. S. H. Talcott, an American practitioner, now states that the case against early rising goes much further. The attention of Dr. Talcott has recently been called to the relative frequency with which farmers and their families become insane. The cause of this has hitherto been held to be the isolation of their lives, the hard work they have to do, and perhaps, the excessive use of pie and potatoes. Farmers have always pure air in abundance, which city folks seldom have; they are less liable to mental and nervous strain than city dwellers, and also less liable to infectious diseases and the bad effects of alcohol. Dr. Talcott's view, after a careful consideration of all the advantages and disadvantages of farming life as a predisposing cause of insanity, is that it is the excessively early hours of rising which increase insanity in the rural districts out of proportion to the urban and suburban rate. He thinks growing children, in particular, suffer severely from the "artificial cut-off," which is applied so rigidly to their lives. Lunacy reports show that during the year ending Sept. 30, 1894, 370 farmers, gardeners and herdsmen were committed to New York State as lunatics, as against these there were only fifty-four members of the professional classes committed, including clergy, military and naval officers, artists, authors, city engineers and surveyors. The commitments in the large class of waters, cooks, servants and farmers and seamen numbered forty-five; while the class of male teachers, students, housekeepers and nurses gave only twenty-three.

Natural Flowers Imbedded in Tiles.

Cl flowers petrified by a process which preserves their color and then imbedded in hard, transparent substances, the composition of which is secret, is now used for decorative tiling or flooring. A material has been discovered, combined with a process, which is the inventor's secret, for completely hardening, and so to speak, petrifying natural flowers (and, what is more wonderful, preserving their colors), and imbedding them flush into the surface of a kind of liquid marble, or alabaster, the whole receiving several coatings of a transparent polishing substance, and drying hard as a rock. Some daisies and ferns have been made by this method, with sunflowers, peonies and dahlias, and are said to be very handsome. The London residence of one of our countrymen, whose identity is concealed by the description, "a wealthy American gentleman," has the conservatory floor studded by this new process with chrysanthemums of every known variety and color. Another floor is a deep-water effect, with white lilies and with minnows swimming below a transparent surface. The treatment is beautifully applied, it is said, to table tops and small panels for decorative purposes.—Upholsterer.

Beating of the Pulse.

By the aid of scientific instrument known as the "pulsimeter," many interesting facts have been ascertained concerning the pulse and its movements. This instrument is now in general use for medical examinations in connection with life insurance. It appears the pulse rate varies with sex, age, condition of body, climate, posture, hour of the day, mental condition and general surroundings. At birth it beats fastest, 130 to 135 per minute; at a year old it falls to 115 to 130; at two years, it is 105 to 130; at three years, 95 to 105; between seven and fourteen the rate is from 80 to 90; fourteen to twenty-one, 75 to 85; twenty-one to sixty, 70 to 75. After this it ranges from 75 to 85, that of the female being always the most rapid. It beats much slower when sleeping. At ages between twenty-five and thirty, in a man, when standing, it is 81 sitting, 71 lying. 66. In a woman it is 81, 81 and 79—so that during the prime ages of life—twenty-one to sixty—the average pulsation in a man is 72, and in a woman 80. The rate is highest between 8 and 7.30 A. M.—74 per minute—and slowest at midnight, when it decreases to 54.

Highest of all in Leavening Power.—Latest U. S. Gov't Report

Royal Baking Powder ABSOLUTELY PURE THE SECOND CABIN PASSENGER By Edward Marshall. (Continued.) "This new knowledge added to my horror for you. It is needless to say that I shared my father's dread. I realized, however, what he did not, that you had a strong motive for keeping quiet. Naturally a paper and incapable of earning money honestly, you were poor. You had wasted all the money you could scrimp from his substance, and were anxious that he should regain his old position, so that you could again exercise your evil power over him to your own financial advantage. "Then, one day I received from him a letter which made him believe that he would have obtained the funds he needed within a few weeks. Only his bad health, he said, could frustrate him. He begged me to keep you quiet only a little longer. "But that evening you overstepped all bounds, and in my anger I forgave myself. I reviled you to your face and incautiously declared that we would soon be beyond your power. Instantly I saw the mistake. You were sick in your mind, and you loved me, and for the first time I realized how vile love could be. You determined that if you lost me you would also drag me down. "I determined upon flight to my father. When I stepped upon the steamer I was eaten up by fear; but when I found that you followed me I was actually relieved. If, for ten days, I was helpless on the ocean to defend my father, you were helpless on the ocean to defame him. "It was in this state of mind that I met Richard Morley. He made quick conquest of my heart. I had been informed that you were sick in your cabin, and I was sure that the night that he told me of his treasure and his hiding place, and afterwards declared his passion, I saw you as you slipped from behind a curtain, where you had been listening to us. "From that moment I feared for him. When I learned that his diamonds had been stolen, I knew that it was your work to injure him, because I loved him. But I dared not speak. I had nothing to prove an assertion of your guilt, and I know you too well to believe that you had left your tracks uncovered. And that night I saw you. "By means of the strange influence which you wield over me—which involved my father in his misery—you had nightly induced a sailor to change places with you in your berth. In his clothing you passed about the ship with small danger of detection. After you had robbed Mr. Morley, you came to me and told me that, unless I promised then and there to marry you, I would be accused of the crime. Had I acceded to your plan, you would probably have taken the diamonds from the hiding place in the cabin, where they must have been resting; even then, and in some way as clever as that which you stole them, have returned them to their owner. But I laughed at you. I did not believe that you could cause anything so absurd as my accusation of a crime, and I felt certain that on board ship you would be unable to expose my father without involving yourself in his ruin. In New York, you could bring about the charges, indirectly causing suspicion in the minds of the victims, which you would start an investigation which you would have apparently nothing to do. But on the ocean, you must needs make a bold statement, which would stamp you as one having criminal knowledge, if not as being a party to the crime. So I laughed at you. I made careful plans for saving Mr. Morley's diamonds too. If you did not return them a half expected you to waken you from your plan had failed. I intended to explain the whole matter to him, whose love I knew, meant sympathy and help in my grievous troubles. I had no doubt of ultimate recovery of the gems. Only one fear troubled me, I knew how, without your late was, and I knew that Mr. Morley had fairly earned it by gaining my

Royal Baking Powder ABSOLUTELY PURE THE SECOND CABIN PASSENGER By Edward Marshall. (Continued.) love. While we were waiting in the Grand Saloon for the search which I did not believe would reveal anything, the idea came to me that out of vengeance you might throw the packet overboard and thus ruin him. No sooner was this thought born than I was instantly in an agony of terror, and in the midst of it, came the news that the jewels had been found. "The reaction was powerful. I did not know where they had been found—I believed that you had desired to return them, and taken your own way to do it. I was relieved from that horrible idea that I might have ruined the man I loved who was trying to save my father, that made me faint. "The publication of the book made a great noise, and brought Dover into many quarters with his fellow-practitioners, who treated him as a quack, as they did Sydenham for that matter. He carried on a bitter war against apothecaries, too, and died in 1742. His powder is still in the British pharmacopoeia. "The Ladies Know by Practical Experience That Diamond Dyes are Far Superior to All others. It is the easiest matter in the world to dye with the Diamond Dyes, as thousands of women know from practical experience, and in this way, one can make old clothing look like new, and save a great many dollars in the cost of the new. The Diamond Dyes, rather than bother with the worthless imitations if sent to me free of cost."

Fire Insurance "The Royal Ins. Co. of Liverpool," "The Phoenix Co. of Brooklyn," "The Sun Fire of London." The above Companies are possessed immense resources, and have a world-wide reputation for strict integrity and liberality in the settlement of claims. JOHN McEACHERN, Agent.
