THE DAILY EXAMINER.

SEPTEMBER 24, 1879.

Trade Prospects in the States.

THE New York Herald gives a number of reports and statements which show the present season to be a very prosperous one in the "protection ruined country." To fill all their orders, the merchants of New York are, the Herald says, compelled to work night and day. It is believed that most of the improvement may be traced to the success with which the leading crops were harvested; but various manufacturing interests are also contributing to this general activity, and the American passion for spending money as soon as it is in hand, is being felt to advantage in all the minor departments of trade.

County Exhibitions.

In compliance with the wishes of farmers and others in King's and Prince Counties, the Government have, this year, made arrangements for the holding of three Exhibitions instead of one. The grant for the purpose is, notwithstanding the depletion of the Provincial Treasury by the late Government, as large as it ever was. But there are, perhaps not without reason, some complaints because the inducements to exhibitors are not greater. Now, there is no doubt that as agriculture is our chief industry and main support, our farmers should be encouraged to improve their farms, to adopt the best methods of cultivation and to obtain the best breeds of horses, cattle, sheep and other farm animals. They have undoubtedly much to learn; and undoubtedly much may be learned by means of public competitions. Therefore the annual exhibitions should be made as popular as possible and should be brought within the reach of as many persons as possible. But while they are confined to one county, it is patent that a very large majority of farmers in each of the other counties can never see them or take part in them at all. True, larger prizes could be given; but this advantage would be more than counterbalanced by the additional expense and risk of travelling long distances with articles and stock.

We hope that after the Government, by a strict adherence to their policy of economy, succeed in getting the Province out of its present difficulties, much larger grants may be given, and that the annual County Exhibitions may be supplemented each year by a general Exhibition held a week or so later, at which all the prize products of the entire Province may be shown.

Russian Crops.

The following is from the *Odessa Monthly Corn Trade Report* of the 20th ult.
The second moiety of last month had passed in great activity. The demand was great for all cereal articles, of which maize came in for the largest share. The aggregate sales for July amounted to 400,320 qrs., against 271,940 qrs in the previous month. The export total is represented by 486,550 qrs., against 694,500 qrs. in June, showing a decrease of 207,950 qrs. The wheat is by no means a good crop, as everywhere growers are meeting with great deception in the yield, and what is worse, the continuance of wet weather threatens to deteriorate its quality. In the Governments of Podolia and Kiev, the wheat crop is very mediocre in quality, and the same applies to Bessarabia, except a small portion in the north of that Government, whence no complaints appear to proceed. In our immediate environs the Ghirkas, as well as the winter wheat are a complete failure, as there will be barely half of what was harvested last year.

An Improvement in Telegraphy.

A remarkable invention or improvement has just been patented in Germany by Prof. Klinkerfues, the principal astronomer at the Observatory of Göttingen, and widely known for his meteorological and physical researches. The improvement now referred to consists of a method by help of which it will be possible to despatch as many as eight different messages along a single wire. An apparatus has likewise been devised by which all the messages will at the same time be mechanically written down.

French Crops.

A French cablegram states that in a detailed annual statement relative to the French harvest, M. Etienne, the great agricultural authority, says it has been very good in 4 departments, good in 7, fair in 24, poor in 40 and bad in 15. This year's aggregate crop will be 9,000,000 hectoliters, against 95,000,000 hectoliters last year. This will make necessary the importation of 5,000,000 or 6,000,000 hectoliters.

Sporting News.

AQUATIC.—A despatch to the New York Herald of the 20th says Courtney's health is declining instead of improving. Courtney looks pale and his appearance indicates suffering. He has just experienced a third attack of ague. It is three weeks ago today since he took any actual practice; but he hopes the indisposition will not last long. He goes to Chautauqua Lake on Tuesday, 23rd inst.

The End of the World.

A lecture delivered at the Berlin University some three months ago by Professor Dubois Reymond, bears the ominous title, "The End of our World," and says that every movement upon our planet, with the exception of the ebb and flood, which are caused by the attraction of the moon is occasioned by solar heat. As, however, the sun loses every year a portion of its caloric, science has lately come to the conclusion that he will not exist as an emitter of warmth longer than 17,000,000 years to come. During that space of time our earth will get colder and colder in proportion as the solar heat shall diminish. The ice will advance from the poles to the equator; the earth's population will gradually recede before the advancing glaciers; the sun will become less luminous, until he will present the appearance of a dark-red ball; and finally ice will annihilate all vitality on our planet.

Silver in New Brunswick.

The St. John Sun says:—"There is no longer any doubt of the existence of silver in our New Brunswick rocks, and in paying quantities. We have been shown during the past twenty-four hours some samples of silver-bearing quartz, which at a distance of only twenty or thirty feet from the surface, produced, by careful assay, about twenty ounces silver to the ton and about 30 per cent. of lead; and it keeps improving as the shaft is sunk. The ore streak has been uncovered to a width of six feet. The mine is situated near deep water and not very far from St. John city. In fact there is reason for believing that we have in New Brunswick what will prove to be a silver mine of great value. Further particulars will be furnished at an early day."

Exports of Breadstuffs.

The quantity of flour and grain exported from this continent to the United Kingdom from September 1st, 1879, to September 13, at New York, Boston, Montreal, and other eastern seaboard ports, and at San Francisco to the 5th inst., was as follows: Flour 129,278 barrels, v. 78,943 last year; meal, 75 barrels, v. 263 barrels; wheat, 4,545,971 bushels, v. 4,370,621 bushels; corn, 2,742,081 bushels, v. 2,196,437 bushels, and rye, 18,126 bushels, v. nil. Exports to the European continent in the same time comprised 5,345 barrels of flour, v. 5,272 last year; 7,734,288 bushels of wheat v. 5,035,137 bushels last year. 502,105 bushels of corn v. 95,451 bushels last year; 235,478 bushels of rye, v. 252,600 bushels last year.

About Breeds of Sheep.

Medium sized sheep, with plenty of lean, is what is prized by city butchers. South-downs possess this qualification. Lincoln, Cotswold and Leicester sheep are large and carry much fat. Lincolns have long, rather coarse heavy fleeces. The wool of the Cotswold is medium in length of staple and in firmness of fibre. The Leicesters have long stapled wool. Oxford-downs are heavy, carry much fat, with medium wool in length of staple and fibre. Hampshire-downs have short strong wool and make good mutton. Shropshire-downs are smaller than the Hampshire, have finer wool and make better mutton, and rate next to the South-downs, which make the best mutton, at least to the English taste, and they ought to know. They have rather fine wool, and wherever mutton is eaten no fault can be found with their meat.

The Manitoba Free Press (Winnipeg) thus compliments its brother pioneer, younger but more advanced, of Battleford, N. W. T.:—"The Saskatchewan Herald has closed its first volume—successfully passing through the most trying period in a newspaper's existence. The success which has attended our western contemporary, we are glad to learn, justifies the publishers in promising the introduction during the next year of several new features that will make it still more interesting and useful. The Herald is not only creditable to its publishers and the Northwest, but it is far ahead of many of the blanket weeklies of the East for enterprise and industry of its columns. It is deserving of the fullest measure of success, and we trust may secure it." It is pleasant to read this record not only as indicative of the spirit of progress which is already bearing such good fruits in the Northwest, but also as significant of the genial good fellowship prevailing among our brethren of the press in those distant communities.

The Methodist church at Centreville, Md., was lighted and decorated for the wedding of Mrs. Taylor, and Mr. Merchant, the minister, was ready, and an expectant throng filled the edifice, when the information came that the couple had decided not to get married. No explanation was given.

A Good Place for a Town Clock.

To the Editor of the Examiner.

SIR:—I notice in your issue of the 22nd a suggestion in regard to a Clock in the new Tower head of Prince Street. I am happy to endorse the sentiments of that suggestion as the present Clock in the Court House tower is a boon to comparatively few except those (as the writer says) who hear the hammer fall.

One need only see the new tower to admire its adaptedness for a Clock. I for one hope that the suggestion of the writer will be acted upon. Would it not pay to remove the Clock from the Court House to the tower of the Baptist Chapel. As for its present situation it is so hampered up with chimneys etc., that one can scarcely see it (illuminated or otherwise.)

Yours, etc.,
WELL KNOWN.

Ch'town, Sept. 24, 1879.

Carelessness.

To the Editor of the Examiner.

SIR:—I would call the attention of the proper authorities to the manner in which the functionary in charge of the buoys and beacons at Rustico South does his duty. On Friday, the 29th of August, there was a storm which removed the outside buoy more than 100 yards from the flats, and one of the small inside beacons disappeared altogether. The outside buoy was allowed to remain on the flats for a whole week, when, on the 5th of September, Mr. Hall's fishermen, for their own safety and for the safety of vessels coming in and out of that harbor, with a good deal of labor and inconvenience, removed the outside buoy to its right place; the inside beacon has not appeared yet, and this is the 22d of September. Now sir, if the gentleman in charge of that department allows such wanton negligence on the part of one of his servants I am very much mistaken in the man. Yours, etc.,
A FISHERMAN.
