N.B. Debentures Offered To Public

Halsey, Stuart & Co. Inc. and associates are offering today $10,000,000 Province of New Brunswick, Canada 4½% Twenty Year Sinking Fund Debentures, due April 1, 1972 at a price of 98.702% and accrued interest.

Of the proceeds of the offering, $4,000,000 will be used, together with $1,000,000 from the Provincial Sinking Fund, to pay at maturity $5,000,000 principal amount of 2¼% debentures of the Province due May 1, 1952. The remainder of the proceeds of the debentures will be advanced to The New Brunswick Electric Power Commission in connection with its electric generating, transmission and distribution system construction program.

The debentures will constitute direct and unconditional obligations of the Province and will be payable as to principal, semi-annual interest and premium, if any, in lawful money of the United States, or, at the option of the holder, in lawful money of Canada. They are redeemable at general redemption prices ranging from 103% to par and through the sinking fund at par.

New Brunswick, the largest in area of the three so-called Maritime Provinces of Canada, is located east of the State of Maine, and the 1951 census showed a population of 515,697, an increase of approximately 13% over the 1941 population. A large part of the interior of the Province is covered with forests, one of the principal resources of the Province. Other natural resources are fisheries, fertile farm lands, water power, soft coal deposits, gypsum, limestone, and other minerals.

Warns Against Egg Quality Decline

The production of eggs in Prince Edward Island is running at the same rate as other years, reports Mr. F. M. Nash, district inspector of poultry products. The demand for the product until just recently has been quite strong and eggs have been moving freely to consuming centres in the Atlantic Provinces.

"The demand for our product has been the one bright spot in a market of falling prices and high production costs," Mr. Nash states. "However, this demand has been slackening and unless something can be done about it, we will lose some of our choice markets for our eggs.

"The eggs being shipped from the Province are not holding their quality. Eggs, Grade A today, deteriorate to Grade B in as short a period as one week. The reason for this is poor flock feeding by producers with resultant lack of body to the egg or poor grading or careless handling of the product by operators of grading stations.

"Whatever it is, those engaged in the production and marketing of poultry products have to improve conditions or accept the loss of markets. There are too many produced of good quality for traders to have to accept an inferior product."

Egg prices eased slightly during the week and operators of stations are now quoting producers for ungraded eggs: AL 31-2, AM 29, AS 23, B 23, C 18. Dealers are quoting for the graded pack delivered: AL 37, AM 35, AS 28, B 28, C 23, and quoting retailers for the same pack: AL 40-1, AM 38-9, AS 31, B 31, C 26. Eggs are retailing to consumers at: AL 48-9, AM 45, AS 39, B 39.

Approved Flock Owners

There are approximately one hundred P. E. I. approved flock owners supplying chick hatcheries in the province with hatching eggs. Since the hatchability of eggs is to a certain extent the criterion of the quality of chicks hatched, we are publishing the names of owners who submitted eggs over the past month which eggs have hatched 80% or better. Eggs hatch all the way from 50 to 90%. 80% or better is considered excellent:
