THE DAILY EXAMINER

THE LEADING DAILY NEWSPAPER OF P. E. ISLAND,

Is issued every afternoon, from the office of THE EXAMINER PUBLISHING COMPANY, in the London House Building, Queen Street.

RATES OF SUBSCRIPTION.
(IN ADVANCE)

ONE YEAR	$4.00
SIX MONTHS	2.00
THREE MONTHS	1.00
ONE MONTH	0.35

Sent post paid to any part of Canada or the United States.

ADVERTISING RATES.

For small advertisements which are ordered for only one or two weeks the charge is 50 cents per inch for the first insertion, and 25 cents for each continuation. Rate cards are furnished on application at the office. Special contract prices at a reduced rate are quoted for advertisements four inches in size or larger, which are to run for three months or longer.

No special notices inserted unless paid for at the rate of 10 cents per line, and under no circumstances will such paid notices appear in the local column.

Special discounts made on all advertisements connected with Church Fairs, Bazaars, Picnics, etc. No notices will be inserted with the same unless the regular rate of 10 cents per line is paid.

That THE EXAMINER is considered by our Merchants and Manufacturers to be the leading newspaper in P. E. Island, and consequently the most valuable advertising medium through which to make their announcements public, is abundantly proved by the fact that in order to accommodate our advertisers we have been compelled to enlarge the paper to its present size.

THE DAILY EXAMINER is for sale by the following agents:

R. H. Mason, Post Office, Charlottetown
Harvie & Co. 64 George Street, "
Theo. L. Chappelle, Queen Street "
J. McIntyre Malpeque Road, "
C. Paul, Lower Spring Park Road, "
W. M. Coffin, Grafton Street, "
D. Chappell, Prince Street, "
Bazaar Store, Queen Street, "
S. Gray, News Stall, P. E. I. Railway, and on the trains.
M. & T. J. Walsh, Eclectic Bookstore, Summerside.
Harry McFarlane, Souris.
Hon. D. Gordon, Georgetown.
D. A. Egan, Mt. Stewart.
G. M. Clarke, Alberton.

The Weekly Examiner

Is issued every Friday morning from the publishers' office. It is made up of matter which has appeared in the Daily editions, and is a first-class weekly newspaper—interesting and full of the latest news.

The subscription for THE WEEKLY EXAMINER, post paid to any part of Canada or the United States, is one dollar per year.

Advertising rates on the same scale as given above for THE DAILY EXAMINER.

WEBSTER'S INTERNATIONAL DICTIONARY

Entirely New. Abreast of the Times. A Grand Educator.

The successor of the "Unabridged."

Ten years were spent revising, 100 editors employed, and over $300,000 expended.

Everybody should own this Dictionary. It answers all questions concerning the history, spelling, pronunciation, and meaning of words.

A Library in Itself. It also gives the facts often wanted concerning eminent persons, ancient and modern; noted fictitious persons and places; the countries, cities, towns, and natural features of the globe; translation of foreign quotations, words, phrases, and proverbs; etc., etc., etc.

This Work is Invaluable in the household, and to the teacher, scholar, professional man, and self-educator.

The Globe, Toronto, says:—
This new dictionary is the best book of its kind in the English language. For every family, the members of which have mastered the art of reading, its purchase will prove a profitable investment.

The Times, Hamilton, says:—
It may well be pronounced the best working dictionary and the cheapest book in the world, and should be in every school and family in Canada.

Have your Bookseller show it to you.

G. & C. Merriam Co. Publishers, Springfield, Mass., U.S.A.

Do not buy cheap photographic reprints of ancient editions.

Send for free prospectus containing specimen pages, illustrations, etc.

ALADDIN'S NEW LAMP.

HOW ELECTRICITY HAS BECOME MAN'S OBEDIENT SERVITOR.

A Model Household Drudge—The Nimble Current Opens Doors, Lights the House and Cooks the Dinner With Deft and Easy Skill.

The extraordinary advance made in the employment of electricity within the last few years in aiding man in many of the annoying and wearying details of daily life is very cleverly epitomized in an article in a recent number of the "Engineering Magazine." The writer tells of a visit to a house fitted up with all the latest electrical noveities which make it rival the wonders of the home of Monte Christo. His host, as they ascend the steps to the front door, push aside the escutcheon about the push button of the door bell, and there are revealed two other buttons, one white and the other black. The white one is pushed, and at once the vestibule door flies hospitably open and at the same instant a flood of light is thrown upon them from an electric lamp placed overhead, which enables the host to find his latch-keys and let them into the hall without any annoyance of waiting outside in the rain. As they remove their coats the host touches a button in the hall which extinguishes the vestibule light and explains that, had he pressed the button disclosed through the escutcheon, as a visitor might, he would not only have thrown open the door and lighted the lamp, but would also have summoned a servant to open the inner door; but that the two concealed buttons were for the use of the master of the house, so that he could light his way on entering and extinguish the light on leaving the house.

DINNER COOKED WITHOUT FIRE.

Before dinner is announced, a maid enters with a tray for the afternoon cup of tea. She places it before her mistress, and after adjusting the plug attached to a flexible cord leading from the water kettle into a socket in the wall near by, departs. The water is soon boiling furiously, and by the time the cups are arranged, the tea is ready for serving. Soon the completed dinner is announced, and the writer is ushered out to a meal cooked, and well cooked, but not by coals of fire. There are no burned spots on the meat, nothing scorched and nothing underdone, but the cooking is rather of the order of perfection of a dinner prepared in the old, evenly heated brick ovens. The electrical baking-oven, in which this meat has been so perfectly prepared, is heated entirely from the inside, and by asbestos packing and burnished external surfaces all radiation to the outside air is checked, so that the heat generated is entirely used in the operation of cooking.

External vessels seated on the top of the stove are not generally used in cooking by electricity, but each saucepan, kettle, frying-pan, griddle, or broiler is provided with its own electrical heater, and only while cooking is being done is any current used in a particular utensil.

NO SHOW FOR BURGLARS HERE.

In this most remarkable house, ingenious precautions are taken against burglars. Should a door or window or shutter of the house be opened, or a leaf or drawer of a cabinet be tampered with in the night, at once the room intruded upon becomes brilliantly illuminated by a lamp which is set in the ceiling and out of reach to smash; in the master's room a light springs up at the ringing of the alarm bell, and the news of the intrusion is at once telegraphed at the nearest police station. Should the burglar attempt to escape through the house, he must light up room after room as he opens the doors.

THE FIRE FIEND SHORN OF HIS TERRORS.

Against a fire, too, these elaborate fittings have provided whatever protection man has devised against that all-destroying fiend. In each room are several of what are called "thermostatic push-buttons"—little devices which close and keep closed an electric circuit whenever the temperament of the apparatus rises above a certain amount. When this occurs in any room, at once every room in the house is lighted, bells ring loudly in all the bed rooms, and at the same time the nearest fire alarm box is automatically pulled and the alarm sent in.

SLEEPING UNDER SCIENTIFIC CONDITIONS.

The sleeping rooms are arranged with thermostats above the beds, which may be set at the temperature at which the occupants desire to sleep. An electrical heater just under the window will warm the incoming air and give a constant temperature to foster pleasant dreams. As often as the temperature of the room rises above that desired, the thermostat cuts off the current until the balance is restored. In the morning a bed-room lamp automatically lights itself at rising time, and the ever-obedient current heats the shaving water for the master and the curling tongs for the mistress.

NOVEL OFFICE APPLIANCES.

Not less interesting than the household employment of the current is the use made of its services by the master of the house in the office. Besides the electrical elevators, the electrical fan and the wonderful automatic temperature regulator in the form of the thermostat, there are some wonderful labor-saving devices. A little dial on the front of the manager's desk has the name of every man in the office printed upon it, and when a pointer attached to a hand over the face of the dial is above a man's name, pushing the button in the center of the dial will call the clerk desired. This teleseme, as it is called, is very convenient, but there is yet a more wonderful device having a similar purpose. Telephones from desk to desk are filled with wires leading to a central exchange on the employer's desk. A contact plug is attached to the latter's 'phone, and on the desk is arranged a bank of plug holes and annunciator-drops connecting with each man in the office who has a telephone. Pushing the plug into one of the plug holes and pressing a button calls the clerk to his telephone, while, if it is desired that the clerk be not allowed to call his employer, the corresponding annunciator-drop is omitted from the employer's desk. Should he desire to talk to two or more clerks at the same time, he has but to call them up, and, changing his contact plug from one hole to another, talk to each without possible interference from the others who are waiting till he speaks again; thus permitting conversations, consultations and cross-questionings without obliging any of the participants to move from their desks, and without disturbing the telephone communication of the rest of the office.—Philadelphia Record.

HOUSEHOLD SUGGESTIONS.

Many Useful and Timely Hints of Value in the Home.

It is said that oleomargarine can be detected by boiling a tablespoonful of it. Boiling butter will foam without much noise, while the sham butter sputters and hisses like lard, but does not foam as decidedly as genuine butter.

A good cement for broken china is made as follows: Make a thick solution of gum arabic in water, then stir in plaster of paris until the mixture becomes a sticky paste. Apply with a brush to broken edges, stick them together and in three days it is almost impossible to break the article in the same place.

Be careful where you keep flour. Like butter, it absorbs odors readily. It should not be kept in a place where there are onions, fish, vegetables or other odorous substances, nor in a damp room or cellar. Keep it in a cool, dry, airy room where it will not be exposed to a freezing temperature nor to one above 70 degrees. Always sift before using.

Never sun feather beds or pillows. Air them thoroughly on a windy day in a cool place. The sun draws the oil and gives the feathers a rancid smell.

When making flour starch on wash day, while it is boiling hot take the coal oil can and pour in about a tablespoonful for every half-gallon, and see how beautifully the starched pieces will iron.

Prepare vegetables at an early hour in the day. Soak cauliflower, cabbage, salad, etc., in salt water to destroy the minute insect that cling to the leaves. To remove every particle of sand wash freely in running water.

All stove pipes, etc., put away for the summer, should be brushed over with a mixture composed of one gill each of linseed oil and kerosene, and a tablespoonful of spirits of turpentine well shaken together. This will effectually prevent rust.

To prevent pie juice from running out in the oven, make a little opening in the upper crust, and insert a small roll of brown paper perpendicularly. The steam will escape from it as from a chimney, and all the juice will be retained in the pie.

Barney Blake.

A PASTORAL OF FIFTY YEARS AGO.

When young Barney Blake went away to the fair
And with him went sweet Kitty Blaney,
O, sure they were just an illegant pair
As ever was seen in Kilmainy.

Now Kitty's bright eyes were like clear summer skies,
Her hair was like corn that is golden,
While soft winds and sunshine light over it flies;
Just beautiful there to beholden.

Now Barney was thirty, and not a day more;
Young Kitty was just about twenty,
Of sweet, bashful beauty she had a rare store,
And Barney of blarney had plenty.

So Barney and Kitty they went to the fair,
Dressed out in the best that they had, now;
A handsomer couple sure niver was there,
And Kitty was rosy and glad, now.

They went to the fair, and they went to the priest,
Young Barney, to wed with his Kitty,
Then off and away for the fun and the feast,
He laughing, the jig and the ditty.

Now, Barney was merry, he danced up and down,
And flourished his blackthorn so frisky,
He kicked up a row and cracked Pat Brady's crown,
Then healed up the wound with some whisky.

Then Kitty's gray eyes looked so solemn and wise,
She went and took Barney's shillalah,
And weedling the boy with her smiles and her sighs,
They tripped away laughing so gaily.

But Barney was loth to be out of the fair,
He didn't see that it was right, boys;
If there was a scrimmage he liked to be there,
And have a good hand in the fight, boys.

But Kitty, the rogue, wouldn't let the boy play,
She knew what he'd do if he tarried,
So said, "Barney, dear," as she led him away,
"You won't fight on the day that you're married!"

'So now from the fair, Barney, come for my sake,
Or a dacent boy's blood you'll be shedding;
There's many a thing you might do at a wake,
But you never would fight at a wedding!"

So he tucked his shillalah just under one arm,
The other he put round his Kitty,
And that's how they went home without any harm,
Both dancing and lilting a ditty.

Paper-Making Materials.

Almost everything in the vegetable kingdom, with large additions from the animal and mineral, will furnish the raw material for the making of paper. The only question is whether it can be reduced at allowable expense. Horns, hoofs, hides and bones, lime, alum, rosin, soda and soap, divers things from divers places, go into paper. The mining of clay for paper-makers' use is a very considerable industry of itself. The clay adds to the body and finish of the paper, and likewise to the profit. Paper has been made of wood, hay, and stubble of mummies and hornets' nests. The list of paper-making materials includes about 400 items. It would be easier to catalogue the materials of which paper cannot be made. Almost anything can be used except nails, needles and pearl buttons, feathers, pigiron and syntax, the only question being the cost of reducing the stuff to pulp.

In the ages B. C. the "reeds" lorded it over the paper-maker, and even for 800 of the years of our lord the papyrus roll held its own. Then for ten centuries the lowly and despised rag was king. But kings are a little passee, and now wood is "boss," or at least divides the empire. The supply of "paper reeds" is exhausted, the supply of rags will not begin to equal the demand; a substitute must be found, and for it we go to the forests.

Wood pulp has achieved a mighty revolution in the art of paper-making, and the revolution is not ended. The wasp has used wood paper for immemorial ages, but man has been slow to use it as a fiber. The invention was finally suggested by observing a wasp's nest made of wood transformed into paper. In the search for a substitute for rags, wood has been experimented with in many places and for many years, but to Frederick Gottlob Keller, of Saxony, is due the credit of the invention about 1845.—St. Louis Globe-Democrat.

Multiplex Telegraphy.

The duplex and the quadruplex systems of telegraphy, begun by Mr. Edison in 1869 and finished after six years of work, have saved in America alone the enormous sum of $15,000,000. By the duplex system two currents of different degrees of strength were sent over the same wire in the same direction, thus doubling its efficiency, while the quadruplex arrangement became possible when it was discovered that these two currents could be carried in opposite directions at the same time—thus enabling one wire to transmit four simultaneous messages. Not satisfied with this, Mr. Edison is confident of attaining sextuplex and octuplex systems.

PROGRESS.

It is very important in this age of vast material progress that a remedy be pleasing to the taste and to the eye, easily taken, acceptable to the stomach and healthy in its nature and effects. Possessing these qualities, Syrup of Figs is the one perfect laxative and most gentle diuretic known.

HAWKER'S LIVER PILLS contain no mercury, are purely vegetable, safe, sure and effective. Do not gripe, small, easy to take. Sold everywhere. .....

JOHN KALLOCH, Montvill., Me.

THEY SAID I MUST DIE: : : BUT : : : I AM WELL AND HAPPY.

MR. KALLOCH SAYS:—
"I am 55 years old, and for the last 15 years, have had the worst Blood Disease known to man. To add to my misery, my Bowels became constipated, appetite ceased, and I was so reduced in flesh and strength, I could only walk by the aid of canes. An Eating Sore started on my side, and in spite of physicians and medicines, increased, until it measured 2 by 3 1-2 inches, laying sections of my Ribs bare. Dr. Kilgore, advised SKODA'S REMEDIES. One course, 6 bottles of the DISCOVERY, with the LITTLE TABLETS, using the OINTMENT and SOAP externally, perfectly healed the sore. I have gained 25 lbs. in flesh, and am a WELL MAN."

I certify to truth of above statement. I knew Kalloch's condition before treatment, saw him during treatment, and have seen him since cured.
VOLNEY B. THOMPSON,
Montville, Me. Chm. Selectmen.

SKODA DISCOVERY CO., WOLFVILLE, N. S.

For sale by all druggists. Trade supplied by W. R. Watson, Charlottetown, P. E. I.

HAVE YOU BACK-ACHE

DODD'S KIDNEY PILLS

WILL CURE YOU

"Backache means the kidneys are in trouble. Dodd's Kidney Pills give prompt relief."

"75 per cent. of disease is first caused by disordered kidneys."

"Might as well try to have a healthy city without sewerage, as good health when the kidneys are clogged. They are the scavengers of the system."

"Delay is dangerous. Neglected kidney troubles result in Bad Blood, Dyspepsia, Liver Complaint, and the most dangerous of all, Bright's Disease, Diabetes and Dropsy."

"The above diseases cannot exist where Dodd's Kidney Pills are used."

Sold by all dealers or sent by mail on receipt of price 50 cents, per box or six for $2.50. Dr. L. A. Smith & Co. Toronto. Write for book called Kidney Talk.
