

MR. COMO MEETS MR. CANADA

Singing star Perry Como, with Canada's Centennial Commissioner John Fisher (RIGHT) at a National Press Club of Canada party in Ottawa Wednesday. Mr. Fisher presented Perry with a Centennial tie clasp and a set of Centennial spoons and brooch for Mrs. Como. He invited the singer, who is appearing at Ottawa's Central Canada Exhibition this week, to return to Canada during Centennial year. (CP Wirephoto)

FACTS FOR FARMERS

It's Major Problem This Time Of Year

By DR. H. H. KELLY
Provincial Veterinarian

During the summer season we tend to neglect our young calves because they are not handled as often as during the winter season. We feed two or three times a day but we are interested mainly in crops that grow in the summer.

Lice on calves are one of the common problems that veterinarians run into in the summer months. Animals become resistant to all types of parasitism as they grow older, that is they build up a body resistance to all types of parasitism as they grow older—that is they build up a body resistance to a heavy infestation. Because of these factors young animals are the most likely to become heavily infested with lice and other parasites.

LIFE HISTORY

The life history of all species of cattle lice is similar. They are normally not found off cattle. The adult female louse eggs hatch in 1 to 2 weeks. The nymphs or larvae are similar to the adult except they are small and lighter in color and not sexually mature, but in two to three weeks after hatching they become mature. Practically all lice will die in two or three weeks in normal barn surroundings after being removed from their host. The lice will not hatch off the host animal.

There are two broad classifications of lice, biting and sucking. The biting lice feed on skin scales and cause an itching and scuffing skin. This affects the animal by stunting its growth or in reducing its thriftiness. As a result of this itching there is a lot of licking by the calf and balls of hair in the stomach may be a serious side effect.

The sucking lice cause the same type of irritation as the biting lice but in addition suck blood and when the animal is heavily infested may produce anemia. The lice that are referred to as Blue Lice belong to the sucking group. Young calves have died as the result of

very heavy infestations of these lice and the P.E.I. Animal Pathology Laboratory has three such recorded post mortems in the past year.

TREATMENT

All biting lice have to be treated by spray, dips or dust applications, but sucking lice may be treated by a systemic insecticide as well. These chemicals (systemic insecticides) are absorbed into the animal's system and kill the parasite by its presence in the blood stream of the animal and in the diet of the sucking lice. Any type of insecticide is poisonous but treatment is designed enough to kill the lice but not sufficient to kill the animal host. This should almost be foremost in your mind. If it is, it will help you to regard the old saying "If a little is good, twice as much must be better." It also must be remembered that young animals are more easily poisoned than older animals.

There are various products on the market for lice control on animals. Three of the safest are Derris or rotenone, Methoxychlor and Malathion. These products are sold under the various trade names. Any product sold for the purpose of controlling lice should be used as the directions prescribe. A dip or a spray will give the best coverage. Dry powder application will give the poorest coverage but if carried out properly will be effective.

For further information contact Dr. H. H. Kelly, Provincial Veterinarian, P.O. Box 2000 Charlottetown, P.E.I.

COURSE AVAILABLE

By DAVID W. ROGERS

The Nova Scotia Agricultural College is offering a new course which should be of interest to all young men who plan to farm in Prince Edward Island. The course is planned to help equip young men to manage their own farm, to become a farm business manager for someone else or to manage or supervise a farm related business firm.

Why should a young man at-

No aim for the production of 12,000 lbs. of milk per cow instead of the present 8,000; 5 tons of hay per acre instead of the present two; 10,000 quarts of strawberries instead of 4,000 quarts; 80 bushels of barley instead of 40 bushels per acre.

So the young men planning to farm need to know about plant and animal science, mechanics, and above all business principles; for the biggest change of all is the way the family farm is turning into the family business farm.

The new course in agricultural business opens on September 14, 1966 at the Nova Scotia Agricultural College in Truro. To qualify for admission the young men must be 18 years of age, and present evidence of a provincial or high school pass at the grade 12 level. The course is of two years length. Courses include such subjects as Agricultural Engineering, Marketing, Business Management, Horticulture, Animal Science and Field Crops. Besides this there is enough science to give an understanding of how plants grow, how animals grow and how the soil is able to produce.

FEES

The tuition for this course is paid by the provincial and Federal Governments so there is no direct cost for tuition to the student. Fees at the college, including medical services and books are about \$110. Board and lodging amount to \$470.00 for the year. So, the total cost for the course amounts to about \$600.00 to which must be added spending money and clothing costs.

Financial assistance of at least \$150 per student is available from the P.E.I. Department of Education for those who attend from P.E.I. This assistance must be applied for at the P.E.I. Department of Agriculture.

APPLICATIONS

The application form for admission in the college calendar or a letter of application may be used when applying for this course. For additional information contact the Registrar, N.S. Agricultural College or the P.E.I. Department of Agriculture, Box 2000, Charlottetown.

Those who know young men who are eligible to attend or should be interested in this course are asked to encourage them to get as much training as possible before they start to farm. An agricultural education won't guarantee success but it should give to young men a better chance to do well in today's competitive agriculture.

FORAGE MEETING

On Monday, Aug. 29, there will be a forage and grain tour. This will begin at 9:30 a.m. from the farm of Wallace Wood, Marshfield.

Farmers will have an opportunity to see the results of direct seeding of forage crop varieties, barley fertilized at 700 lbs. 6-12-12 per acre as well as other interesting items.

Dr. Lloyd MacLeod, research officer at the Experimental Farm, Charlottetown, will be present to explain the demonstration.

All those interested in improved forage crops are invited to attend.

Committee On Rhodesia Has Meeting Report Ready

By CARL MOLLINS
LONDON (CP) — Disputes within the Commonwealth over treatment of the white-minority regime in Rhodesia are down in formal black and white for further debate at a top-level Commonwealth conference opening here in two weeks.

A report by a committee of Commonwealth envoys in London on present economic sanctions and possible future action against Rhodesia has been completed after seven months' work, a Commonwealth secretariat spokesman said Tuesday.

The report offers no consensus either in judging the effectiveness of sanctions applied so far or in proposing future action against Rhodesia, an informant indicated.

The confidential study will serve as a working paper for the meeting of Commonwealth heads of government Sept. 6-15. Chief topic of debate at the conference will be the failure of a British-led trade embargo and current Anglo-Rhodesian discussions to topple the Rhodesian regime of Ian Smith or persuade it to give the Negro majority a significant voice in the government.

Smith declared Rhodesia's independence of Britain Nov. 11 in a move declared illegal by Britain. At an emergency Commonwealth conference last January in Lagos, Nigeria, British Prime Minister Wilson assured African leaders impatient for tougher measures that economic sanctions would force Smith's surrender in a matter of weeks.

TO MAKE STUDY

Commonwealth high commissioners in London were assigned to study the effectiveness of sanctions before a heads-of-government conference originally scheduled for July but then postponed until September.

Their report reflects the diverse views of Commonwealth governments, ranging between the extremes of Britain and Zambia. Britain maintains the sanctions are exerting political pressure on the Smith regime. Zambia, Rhodesia's neighbor, says time has proved the sanctions of a failure and wants tougher action.

The high commissioners have catalogued in detail how the trade embargo has worked and where it has failed, including information on who has continued to conduct business with Rhodesia. It lists aid offered and given to Zambia, which is economically dependent on Rhodesia.

Proposals for tightening pressure against the Smith regime—such as action through the United Nations, extending pressure to countries defying the Rhodesian embargo or using force—are accompanied by arguments put by the various Commonwealth governments about the likely consequences of new moves.

The arguments are expected to be revived with feeling when heads of government confer. As of Tuesday, Zambia and Tanzania had sent no replies to invitations to the conference from the Commonwealth Secretariat. Jamaica, Kenya, Pakistan and Trinidad will be represented by minister-deputizing for heads of government, and India is undecided. The remaining 15 government heads have informed the secretariat they will be attending in person.

BIG OPERATOR

There's nearly 10 tons of road machinery in the hand of this 16-year-old miss Elaine Hutchison of St. Mary's who has been operating the equipment, owned by her father, for three weeks on Perth County Road 23 near Tavistock. (CP Wirephoto)

EATON'S OPEN TONIGHT UNTIL 9.30

Make EATON'S Your Headquarters for all your Back-To-School Needs

36 REASONS TO SHOP FOR SAVINGS ON SATURDAY

Boys' Koratron Permanent Press Slacks
Terylene and cotton, adjustable waist, colours black, beige and olive.

Special, pair **4.49**

Barbie and Midge Metal Lunch Kits
With thermos.

Special, **2.97**

Bongo Bag
With vacuum bottle. Colours green or red.

Special, **3.69**

Two Only 125CC Motor Scooters
Up to 120 miles per gallon, wind shield, signal lights, electric start, slightly used, original price 449.00.

Special, **299.00**
