

FISHING OYSTERS AT MALPEQUE

LOBSTERS ARE BACKBONE OF ISLAND'S INDUSTRY: WORTH MILLIONS ANNUALLY

PRINCE EDWARD ISLAND is world famous for its Malpeque Bay oysters. Caught in quantity here the oysters are shipped all over the world and served as delicacies in famous restaurants. Continuing research in oyster development

is carried at a federal government biological station at Ellerslie, P.E.I. The tasty lobster is the Island's greatest moneymaker in the fishing industry. Annually it nets the fishermen more than all other types of fish put together.

BOGART IS FIRST

The life story of the late Humphrey Bogart is the first program of NBC-TV's series "The Hollywood Story" for the 1963-64 season.

MADE HIGH TEST

The 1963 United States Everest expedition measured solar radiation at 28,000 feet on the mountain.

Two veterans will captain new draggers

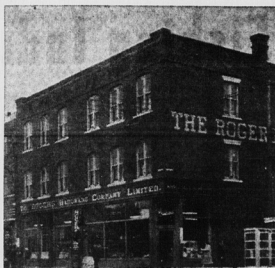

Two new boats will be added to the Souris dragger fleet some time this fall. Both of the new draggers will be steel and will be the largest boats in the entire fleet. Due to their size and being made of steel, these boats are expected to add two months to the fishing season, one in the spring, and one in the fall.

Two veterans of fishing, Egbert Bortein and Jonas Bjornson, both of Souris, will be the new owners. Egbert has been one of the top skippers fishing out of Souris, and Jonas is the acknowledged "King of Dragger Fleet".

Despite the fact that 1962 was not one of the best years for the dragger fleet, Eastern Fisheries Ltd. of Souris has given the fleet a vote of confidence. Up to this year, both plants in Souris operated with what is known as a cutting line. This year, Eastern Fisheries Ltd. has made many changes, including the installation of a second cutting line.

"A cutting line" consists of the following: First, a filleting table, where the fillets are cut from the fish. Second, skinning machines, where, as the name implies, the skins are removed from the fillets. Third, a candling table, where the fillets are checked, and a packing table, where the fillets are weighed and put into the different size packages.
