A FEW HINTS FOR THE USE OF

AYER'S PILLS

Dose.—To move the bow-
els gently, 2 to 4 Pills;
thoroughly, 4 to 6 Pills.
Experience will decide the
proper dose in each case.

For Constipation, or Costiveness, no
remedy is so effective as AYER'S PILLS.
They insure regular daily action, and re-
store the bowels to a healthy condition.
For Indigestion, or Dyspepsia, AYER'S
PILLS are invaluable, and a sure cure.
Heart-burn, Loss of Appetite, Foul
Stomach, Flatulency, Dizziness, Head-
ache, Numbness, Nausea, are all relieved
and cured by AYER'S PILLS.
In Liver Complaint, Bilious Disorders,
and Jaundice, AYER'S PILLS should be
given in doses large enough to excite the
liver and bowels, and remove constipation.
As a cleansing medicine in the Spring, these
PILLS are unequalled.
Worms, caused by a morbid condition of
the bowels, are expelled by these PILLS.
Eruptions, Skin Diseases, and Piles,
the result of Indigestion or Constipation, are
cured by the use of AYER'S PILLS.
For Colds, take AYER'S PILLS to open
the pores, remove inflammatory secretions,
and allay the fever.
For Diarrhoea and Dysentery, caused by
sudden colds, indigestible food, etc., AYER'S
PILLS are the true remedy.
Rheumatism, Gout, Neuralgia, and
Sciatica, often result from digestive derange-
ment, or colds, and disappear on removing
the cause by the use of AYER'S PILLS.
Tumors, Dropsy, Kidney Complaints,
and other disorders caused by debility or
obstruction, are cured by AYER'S PILLS.
Suppression, and Painful Menstrua-
tion, have a safe and ready remedy in

AYER'S PILLS.

Full directions, in various languages, ac-
company each package.

room. Consignments solicited.
Liberal advances made on receipt of con-
signments.
Sept. 9, '85—tl dec31

A New Explosive.

A new explosive known as hellhoffite,
which has been invented by Hellhoff and
Gruson, has been subjected to comparative
trials at St. Petersburg together with nitro-
glycerine and ordinary gunpowder. It is a
solution of a nitrated organic combination
(naphthalene, phenol, benzene, etc.) in fuming
nitric acid. In preparing the hellhoffite
tried in the experiments, binitro-benzene, a
solid, in explosive, and badly burning body,
was used. At the first trial glass bottles of
20 centimes contents each were filled with
20 grammes of the respective explosive sub-
stances, and corked down. A tube filled
with fulminate of mercury was passed
through the corks, a slow match being at-
tached to the outer end of the tube for the
purpose of ignition. Each of the bottles
thus prepared was placed on a fringed
cone of lead, the upper diameter of which
was 3.5 centimetres, its lower 4.5, and its
height 6. The cone itself stood on a cast
iron plate 2.5 centimetres thick. The de-
formation of the lead cone by the action
of the explosives could consequently be
taken as a measure of the respective de-
structive power. The explosion of the nitro-
glycerine, as was anticipated, caused no
changes. By the explosion of the nitro-
glycerine the cone was compressed about a
quarter of its height; its surface had assumed the ap-
pearance of a well-worn hammer; the di-
ameter of the surface had been increased to
5.5 centimetres. The explosion of the hell-
hoffite caused much greater changes. The
surface of the cone was completely torn
pieces five centimetres long and two
centimetres thick were torn off and thrown
about for several paces; only half the cone
was still a compact but entirely defaced
mass. At the second experiment bottles
(of 25 grammes each) filled with the various
explosive substances were let into corres-
ponding cavities bored into the face of fir
blocks of similar dimensions. In exploding
the gunpowder the block was torn into four
pieces as if split with a hatchet, the several
pieces were thrown about for 18, 12, 11 and
10 paces. In exploding the nitro-glycerine
the block was split into several pieces.
The upper portion of the block, as far as
the bottle was let into it, was torn off per-
pendicularly in the direction of the fibre in
such a manner that a smooth cut was
formed. The explosion of the hellhoffite
likewise tore the portion of the block sur-
rounding the bottle perpendicularly in the
direction of the fibre, and splintered the
remainder of the block into a large number
of thin fibres. The following experiments
were also made with hellhoffite alone: A
slow match was passed through the tube in
the cork, which was without fulminate of
mercury, as far as the surface of the hell-
hoffite in the glass bottle; no ex-
plosion followed on igniting the slow
match. A quantity of hellhoffite poured
into a bowl could not be ex-
ploded by a lighted match. Finally a few
drops of hellhoffite were poured on an anvil,
and exposed to heavy blows with a ham-
mer, and no explosion followed. The hell-
hoffite, consequently possesses the fol-
lowing advantages: (1) In igniting it with
fulminate of nitro-glycerine; (2) it may be
stored and transported with perfect safety
as regards concussion, as it cannot be ex-
ploded either by a blow or a shock, nor by
an open flame. On the other hand it has
the following disadvantages: (1) Hell-
hoffite is a liquid; (2) the fuming nitric acid
contained in hellhoffite is of such a volatile
nature that it can be stored only in per-
fectly closed vessels; (3) hellhoffite is
rendered completely in explosive by being
mixed with water, and can consequently
not be employed for works under water.—
London Times.

A Wife's Sacrifice.

SHE COMMITS BURGLARY THAT SHE MAY BE
NEAR HER TRUANT HUSBAND.

RICHMOND, VA., Sept. 24.—Ada Green,
the young Cuban wife whose devotion to a
truant husband led her to commit the crime
of housebreaking in order to be near him
in his prison cell, was to-day tried in the
hustings court in this city, and sentenced to
five years' penitentiary. The young wo-
man's history is a decidedly romantic one,
as she relates it. After her conviction to-
day she told the following story of her life:
I was born in the West Indies 18 years
ago, and my occupation is that of a dress-
maker. I left Cuba several years ago and
went to Philadelphia. While in that city
I became acquainted with William Hicks
and married him. He deserted me,
and I returned to my home
in Cuba. Some time elapsed be-
fore I could obtain any tidings of his
whereabouts; but, finally, I learned that
he was in this country, and in trouble. I
immediately left Cuba and landed in New
York. From New York I went to Phila-
delphia and Boston, and diligently searched
for him. At last I heard that he was in
Richmond, and in prison. I came on to
Richmond, passing through Washington,
where I put on male attire. When I found
my husband was in jail, I set to work to
know how I could get to him. I concluded
to commit theft that I might be sent to jail,
where I could be with him. She was in
jail two weeks before the prison authorities
suspected her sex. It would not have been
discovered then, had not a fellow-prisoner
heard her talking with her husband and
informed the jailer. Ada Green or Hicks
is quite intelligent, and her bearing quite
dignified and modest. The evidence
against the woman was so direct that no
defence could be offered by her counsel, and
she pleaded guilty. It is believed that the
officers of the court will petition the gov-
ernor to commute her punishment to twelve
months in jail.

Old Probabilities.

The degree of accuracy attained by "Old
Probs" in his daily weather forecasts is
hardly less than wonderful. The August
report of the Dominion Meteorological
Bureau just out shows that of fifty
storm warnings issued during the
month, forty-seven, or ninety-four per
cent. were partially, and forty five or
ninety per cent. fully verified in every
particular. The predictions as to the prob-
able changes in the direction of the wind in
connection with these warnings were even
more fully borne out, in every instance
the indicated change taking place
in a more or less marked degree.
In only one case was a storm reported
before the bureau had indicated its
approach. The month throughout the
country was a cold one. The mean tem-
perature at every station except Halifax
was from 3° to 5° below the normal. At
Montreal it was 62° 98° - 5-19° below the
average, and 5-81° colder than in the
same month in 1884.

Ingenious Process of Tooth- Drawing.

A dentist of Geneva has invented a new
and ingenious process of tooth-drawing. A
small square of india-rubber, pierced with a
central hole, is pushed over the tooth till
the upper part of the root is reached. The
indian rubber gradually contracts, pulls on
the root, and the offending tooth is finally
enucleated, without causing the patient any
pain whatever. Four or five days are
generally required to complete the opera-
tion. Very slight bleeding and a slight
swelling of the gum are the only incon-
veniences experienced. M. Paul Bert
brought this ingenious method before the
Academie des Sciences in Paris, when M.
Guilpin remarked that the process was
already known, and quoted a case in sup-
port of its efficacy, in which a young girl
had placed a ring of India rubber round
her two front incisors, and forgot that she
had done so, the result being that she lost
the teeth.—British Medical Journal.

Lake Constance.

The Lake of Constance is only fifty miles
in length, but anyone who travels from
pier to pier and wishes to know the right
time of day, ought to carry five watches.
Its waters wash the shores of five different
States—Austria, Baden, Wurtemberg,
Bavaria, and the Swiss Federation. If you
land at Rogschach, and want to catch the
train for Rorschach or Chur, your watch ought
to stand at Bernese time. In Friedrich-
shafen you must know the Stuttgart time,
in Constance the Baden time, in Lindau
the Munich time. The Austrian time is
not reckoned from Vienna but from Prague
time, which differs no less than twenty-
eight minutes from the Bernese time. Hence
a traveller crossing over the Austrian fron-
tier at St. Margareten must put back his
watch half an hour in order to set himself
right at the Swiss station.

It has now been ascertained that in addi-
tion to the seventeen persons crushed to
death by the jam of people in front of Mme.
Nilsson's hotel in Stockholm, twenty-nine
others were severely injured. Mme. Nil-
sson is so prostrated by the shock that she
has temporarily postponed the fulfilment of
her engagements.

The London Standard, commenting upon
the increase of boycotting and menacing of
land owners and others, fears it means the
inauguration of another "no rent" cam-
paign. The Standard urges the alteration
of the land law at any cost, with the view
of putting an end to boycotting.

Irish landlords are arranging to send a
deputation to the Marquis of Salisbury,
urging that it is impossible to collect rents,
and asking for protection.
