A FORWARD-LOOKING OCCASION...

Ever since the Beginnings of the Dominion, when Charlottetown was "The Cradle of Confederation", fellow-Canadians of the mainland have had many occasions to admire and pay tribute to the enterprise of "The Islanders".

One such occasion, worthy of special mention, is the opening this week of the expanded and newly reconstructed building of DOUGLAS BROS. & JONES—one of the most modern and completely equipped "Plumbing and Heating Headquarters" in Canada. Consolidating under one roof the expanded facilities required to meet the ever-increasing demands upon the plumbing and heating contractor, the building is in itself convincing evidence of the steady growth of DOUGLAS BROS. & JONES, the consistent forward-looking policy of the firm, and its long and increasing service to the Charlottetown area.

We of Crane Limited, who have for many years had a valued and friendly association with Douglas & Jones as one of their major suppliers, are happy to extend congratulations to this well-known Charlottetown firm on this significant occasion. In this we know we are joined by all members of the plumbing and heating industry in Canada—for the opening of this splendid building is one more indication of the increasing importance of the plumbing and heating contractor in modern Canadian communities. He is making a major con-

tribution to better Canadian living. Upon him depend in large measure the health, comfort and convenience of present-day homes. He can be of immeasurable help to the home-owner in all matters pertaining to the selection, arrangement, installation and maintenance of equipment. His training and skill—plus the quality fixtures and fittings supplied by Canadian manufacturers—are assurance that an entire plumbing and heating system will provide satisfactory, trouble-free service for many years.

When Visiting DOUGLAS & JONES

We know you will be captivated by the array of plumbing and heating material on display there for your inspection. Be sure to see the variety of CRANE sinks, lavatories, bathtubs, water closets, laundry tubs. These are available in a complete range of designs and materials—to enable you to make the exactly right selection to fit your plans and purse.

In particular you'll be interested in "Crane Plumbing Brass"—such as the wonderful new "Dial-Ese" dripless faucets and supply fittings that open or close with fingertip control. Attractive design is set off by the sparkling brilliance of lustrous, long-wearing chrome.

Ask, too, about the advantages of such modern fixtures as: The Mixing Spout Faucet which provides one spout for hot and cold supply, assuring tempered water delivery; The Deviator Spout for showers, the most satisfactory way of directing water at desired temperature through the shower, with no chance of a surprise dousing; the new Thermostatic Valve which controls the temperature of the bathtub's water supply; the new Rainbeau Shower Head, one of several types available to give you the kind of shower you like.

You'll be intrigued by the wide range of colors in which you can now obtain Crane bathroom fixtures—from a choice of eight charming colors and white with your desired decorative scheme. And whatever the basic material of bathtub, wash basin or toilet, any set of Crane fixtures will harmonize, not only in style but also in color values.

An abundant supply of domestic hot water without a storage tank? It's now possible with the new "BILTIN" tankless instantaneous coil—one of the features of the Viking 4700 Oil-Burning Boiler.

And when visiting Douglas & Jones, be sure to get a supply of latest Crane literature on any of the plumbing or heating subjects in which you are interested. You'll find it interesting and informative—a real aid to your planning.
