CANALS IN CALIFORNIA.—There are now in California 4503 miles of canal valued at \$6,311,700, showing an increase 3429 miles valued at \$4,047,700 during the last year. In addition to which 112 canals and ditches have been commenced, and will probably be completed within the next year. Among them is the Sierra Nevada Mountain Canal—an immense canal—ten feet in the bottom, fourteen at the top, and designed, with branches, to extend over about 150 miles. There are 59 quartz mills in operation, crushing 322,000 tons per annum, and realizing \$1,082,100.

THE IMPORTANCE OF A LETTER.—The Rev. Sydney Smith, preaching a charity sermon, frequently repeated the assertion, that of nations, Englishmen were most distinguished for generosity and the love of their species. The collection happened to be inferior to his expectations, and he said that he had evidently made a great mistake, for his expression should have been that they were distinguished for their love of the specie.

AGRICULTURAL COLLEGE OF MARYLAND.—The bill to incorporate and endow an Agricultural college, appropriating \$50,000 annually from the State Treasury, was finally passed both branches of the Legislature, and is now a law. This annual appropriation is, however, not available to the college until subscriptions to its capital stock to the amount of 2000 shares at \$25 per share be actually secured and made good.

SUPPER EXTRAORDINARY.—DEAF AND DUMB.—Recently a company of forty of the deaf and dumb sat down to supper in Mr. Seawrey's large dining room, 179 Froughtate, Glasgow, Scotland. This was a friendly meeting, composed of young people of both sexes, and one or two married men and their wives, but all deaf and dumb. It was not a little interesting to witness the manner in which the honors of the table were done, and once they were with spirit and propriety. Before commencing supper the Chairman, in asking a blessing, stood up, as did all the rest of the company, and made the appropriate signs with his fingers, which were duly understood, and no doubt duly felt. The supper was despatched with extraordinary rapidity, knives and forks being plied with the utmost nimbleness, occasionally being thrown down till the parties would engage in a little finger chat, and then as nimbly snatched up and applied in the proper manner.

VEGETABLES SHOULD BE COOKED IN SALT WATER.—It is well known that after potatoes are boiled and the water poured from them, if they are well shaken up, with the addition of a little salt, their flavor is much improved. Why, we know not. Professor Boeghter, a German chemist, speaking in reference to boiling vegetables in water to which a little salt is added, says:—"If one portion of vegetables be boiled in pure (distilled or rain) water, and another water to which a little salt has been added, a decided difference is perceptible in the taste and odour, and especially in the tenderness of the two portions. Vegetables boiled in pure water are vastly inferior in flavor. This inferiority may go so far in case of onions that they are almost entirely destitute of odour or taste, though when cooked in salted water, they possess in addition to the pleasant salt taste, a peculiar sweetness and a strong aroma. They also contain more soluble matter than when cooked in pure water. Water which contains 1/400th of its weight of common salt is far better for cooking vegetables than pure water, because the salt hinders the solution and evaporation of the soluble and flavoring principles of the vegetables. This explains the advantage of the general use of salt in cooking, and the impossibility of overcooking, by subsequent additions of the same salt, of flavor in vegetables that have been boiled without it."
