

Boost In Church Givings Reported At Conference

SACKVILLE, N.B.—An increase of \$53,184 in the givings of the churches of the Maritime Conference of the United Church of Canada was reported by Rev. C. E. Gordon of Truro, N.S., convener of the committee on the missionary and maintenance fund on Friday evening.

Mr. Gordon reported a total of \$485,669 for 1956 in the givings of the conference churches "for others." Two hundred and sixty-two churches registered increases over the previous year, yet the average for benevolences of the church is only \$5.67 per member, Mr. Gordon reported. The conference accepted an objective of \$496,000 for the current year.

Mr. Gordon was assisted in the presentation of the report by Rev. Richmond Stuart, Tatamagouche, N.S., Rev. James Brooks, Digby, N.S., and Rev. John Jarvis, Dominion, N.S., who discussed various phases of the report.

A farewell message was read to conference from Dr. Sidney Gilchrist, now in the west on a mission to return to his medical missionary work in Angola, West Africa.

Rev. Clarke MacDonald of Sydney presented to the conference the following missionaries and former missionaries: Rev. Dr. and Mrs. E. J. O. Fraser (Korea); Rev. Dr. George Murray (Trinidad); Rev. Dr. and Mrs. H. F. Bently and Miss Christine MacDougall (Trinidad); Rev. R. L. Bacon (China); Miss Mary MacDougall (Angola); Whitney Dalrymple (under appointment to Angola).

Rev. Dr. Frank E. Archibald of Moncton gave the conference the highlights of the meeting of the board of overseas missions which he attended in Toronto, especially the public service at which new missionaries were commissioned.

Whitney Dalrymple, former secretary of the Maritime Religious Education Council, Saint John, told of his year spent in Nigeria training leaders in Christian education. He pleaded for several young ministers to volunteer with him to help fill the 11 urgent vacancies in the overseas staff of the United Church of Canada.

Rev. D. Archibald of Wolfville, N.S. presented the report on the Berwick Camp Association stating the camp site and building were in excellent condition.

The conference unanimously chose Rev. E. D. Murray of Halifax as editor designate of the United Churchman, to take office July 1st, 1958, when the present editor, Rev. Dr. W. F. Munro, after 10 years' service in that capacity returns to the pastorate.

Recognize High Scout Training Qualifications

WALTER B. LePAGE

It was announced by Provincial Headquarters of The Boy Scouts Association yesterday that Walter B. LePage, Assistant Provincial Commissioner Training, had been awarded an Honourable Charge as Assistant Akela Leader and also as Assistant Deputy Camp Chief by the Deputy Chief Scout for Canada, Mr. Jackson Dods.

Mr. LePage has been active as a Scout Leader and Official since 1957 as Executive Commissioner, Lone Scout Commissioner, Secretary of the Provincial Council and presently as head of the local training team. He will be Camp Chief at the Silver Arrowhead Course from July 2d to 6th.

St. Thomas Aquinas Society Annual Meeting Held In City

The annual meeting of the St. Thomas Aquinas Society was held in the E.I.S. Hall on June 16th. The president, Mrs. Henry Doiron, occupied the chair. In the absence of the secretary, Mrs. Adolphe Doiron, the minutes of the last annual meeting were read by Mrs. J. E. Arsenault and on motion were adopted as read.

The financial report was read by the treasurer, Mrs. J. H. Blanchard. This report which showed total receipts of \$929.58 was adopted as read.

The auditor, Mr. Jerome Gallant reported that an examination of the books kept by the treasurer, showed that the accounts balanced and that all records are correctly kept.

Short congratulatory remarks were made by Inspector F.E. Dolron, Mr. J. E. Arsenault, Miss Bertha Desroches and Mr. J. H. Blanchard.

The report of the resolution committee was read by Inspector Dolron. In this report, thanks were expressed to all those who in any way helped in the work of the society.

The report of the nominating committee was brought in by Mr. J.E. Arsenault. This was a recommendation that the entire slate of officers should be continued in office as follows: president, Mrs. Henry Doiron; vice-president, Mrs. Ambyr Doyle; secretary, Mrs. Adolphe Doiron; treasurer, Mrs. J. H. Blanchard; auditor, Mr. Jerome Gallant; executive committee, Mr. Frank E. Doiron, Mrs. Gilbert Richard, Mrs. Jerome Gallant, Mrs. Edward Arsenault.

Delegates to the annual meeting of the Society are: Mrs. Stanley Doiron, Mrs. Ambyr Doyle, Mrs. Andrew Arsenault, Mrs. John Walsh, Mrs. James Thistle, Mrs. Mary Arsenault, Mr. Frank E. Doiron, Mrs. Edmund Pitre, and Mrs. Rancy Gallant.

butter parties and chopped ice, then the lunch-time salads and saucers, finally dinner.

Polishing silver? "A truly dreadful chore." But the food was good.

He's thinking vaguely, he says, of spending his 1,000 on a party aboard a train.

Noble P. R. O. Wins His Bet

MONTREAL (CP)—Baron Theo Roth Von Schreckenstein, Ted to his fellow workers, says he's won his \$1,000 bet.

"I must admit that sometimes I thought I was going quite mad," the baron, who claims descent from Austrian nobility, says he's just finished two months as a pantryman aboard a Canadian Pacific Railway diner.

The baron says he was at a party here when a friend suggested: "Theo, my boy, there's one thing wrong with you. You could never do an honest day's work in your life."

The bet was on.

"You can still see the redness of my hands," he explained in an interview, reviewing his duties as Pantryman No. V-273977, on leave from his post as a publicity director for a Montreal publishing firm.

"After all, I had never, never touched a dishcloth before."

Up at 6 a.m., the baron prepared the fruit juices, cereals,

AGRICULTURAL NEWS

P. E. I. Department of Agriculture

To receive service from any of the A.I. Clubs all livestock owners have to do is to telephone the Inseminator in his area. All livestock breeders in Prince Edward Island are eligible to become members of an Artificial Breeding Club. The membership fee is one dollar for one year or five dollars for a life membership. The service fee is four dollars per cow. This fee will entitle the breeder to three services if necessary.

The P.E.I. Department of Agriculture assists the Clubs in organizing and pays in part for part of the cost. Each Club conducts its own business. If you have any questions contact your local club or write to Dr. George C. Fisher, Box 3000 Charlottetown.

TOMORROW, Thursday, June 20th will be the official starting date for the West Prince Artificial Breeding Club and the Morell and District Artificial Breeding Club. This is a milestone in the history of Artificial Breeding in the Province. This marks the formation of the twelfth and thirteenth Club and gives Province wide coverage.

The Inseminator of the Morell and District Club is Garth Webster, Telephone Morell 17-2. This Club includes the Districts from the Blooming Point Road up to Five Houses.

The West Prince Club includes the area down to the Dock Road from the West end of the Island. The Inseminator is Raeburn Oliver. Telephone Alberton 80-32 for service.

In order to receive service in any one day calls must be in by ten in the morning. Cows noticed after this time are better bred the next day when using Artificial Insemination. This is one of the big differences from natural breeding.

BLACKLEG
Losses have been experienced in various parts of the Province, this spring from Blackleg. These heavy losses can be prevented by having your calves and heifers protected.

Blackleg is a highly fatal, rapidly progressive, infectious disease of young cattle. Animals between the ages of six months and two years of age are most susceptible; although the disease sometimes occurs in both younger and older stock. The germs are found in the soil and on forage in many areas. Animals become infected by eating or drinking contaminated food and water or through puncture wounds, and abrasions of the skin. Blackleg symptoms are easily recognized. There is loss of appetite, high fever, rapid breathing and lameness, afterwards characteristic swellings appear in the muscles under the skin of the neck and shoulder. One or more of these symptoms may be absent. Therefore, it is necessary to have a case diagnosed by an experienced man. Death usually occurs twelve to thirty-six hours after the first symptoms are noted.

There is no practical treatment for blackleg. Vaccination is the only reliable and effective means of protecting animals against this disease and should always be done before animals go out to pasture. However, if your animals have not been done do not hesitate to have them vaccinated. The practice of using the pills shot under the skin is not satisfactory, and in a great many cases does more harm than good. The most satisfactory way to have your animals vaccinated is to contact your district veterinarian.

Blackleg, while chiefly a disease of young cattle, frequently occurs in sheep. Heavy losses of lambs from blackleg have resulted when freshly docked or freshly castrated lambs were turned out into pastures where the soil was heavily contaminated with blackleg germs.

The symptoms of blackleg in sheep closely resemble that of cattle. Sheep and lambs can also be protected against this disease by vaccination.

PASTURE FOR SWINE
Pasture crops are valuable for breeding and growing swine. In addition to providing green, succulent feeds they supply proteins, minerals and vitamins in readily available forms. Moreover, the hog, while foraging, takes exercise, an important routine in the life of breeding boars, brood sows and young pigs.

Pasture crops play an important role in the control of parasites. If pastures are rotated or changed, worm infestation can be brought under control to a considerable extent. Young pigs that have been treated for worms after weaning and put on clean pasture have a reasonable chance of escaping further infestation.

Most clover and grasses grown on Prince Edward Island farms provide suitable pasture, but none is better than alfalfa or red clover. Fall wheat can be pastured in the late fall or early spring when other forage crops are not available.

The welfare of the whole dairy industry is intimately connected with the sanitation of milk produced on our farms. Much more than the average producer realizes, the quality of our cheese, butter, ice cream as well as the milk consumed on the efforts the farmer puts forth to produce what is called clean milk. The high degree of quality which these manufactured products are able to reach will be limited by the producer's ability to deliver a pure product.

The handling in the manufacturing plants is important of course but no cheese maker, butter maker, or any other manufacturer can make a better quality product of the milk or cream delivered at the receiving vat. It is being more and more realized that quality in milk depends upon something else rather than the percentage of butter-fat contains. Payment on a butterfat basis is no doubt a good method but there is an equally just system and that is according to sanitary quality.

Clean milk will bring benefits to the producers as well as consumer. A better grade of cheese and butter will react to the producer's benefit. Moreover, improvement in the sanitary quality of milk will lessen the danger of having it rejected as tainted, sour or otherwise unsuitable. If any further incentive is required to produce clean milk, we need only mention the lessened danger to the health of the producer's family and livestock which follows the use of sanitary methods about the farm.

PAINT REQUIREMENT
It is impossible to give a rule that will apply to the amount of paint required for a given surface, in all cases, as the amount varies with the kind and thickness of the paint, the kind of wood or other material to which it is applied, the age of the surface, etc. The following is an approximate rule: Divide the number of square feet of surface by 200. The result will be the number of gallons of liquid paint required to give two coats; divide by 18 and the result will be the number of pounds of pure white lead required to give three coats.

SHEET CARE
Give sheets a chance to retain their original identity. Even after 200 washings and wrerings it is possible if care is taken in laundering and use.

Soak stained sheets 15 minutes in cool water to loosen stubborn spots which might become set in hot water. Then, dissolve heavy duty soap or detergent in washing machine tub, add sheets, and wash 5-10 minutes. Very badly soiled sheets may be washed, then boiled but only for 5 minutes. Rinse the sheets in clean water until the last rinse is clear, then fold evenly support and put through the wringer straight. Colored sheet should be given a separate washing and rinsing. On white sheets a bleach used during each wash is preferable to a heavy bleaching once in a while.

Hang sheets lengthwise with the hemmed edges dropped over the line about a foot. Let the sun help you bleach the white sheets, but keep the bleached ones in the shade. Avoid leaving sheets out in a high wind.

When it comes to ironing do not press directly over folds. Those thin spots at creases can be eliminated if you vary your folding. Distribute wear evenly among your sheets by placing freshly laundered ones at the bottom of supply piles. Store away from steam or hot water pipes as heat yellows and dries out the sheet fabric.

Once in a while put the bottom hem at the top of the bed. Sheets chances of becoming torn diminish when a periodic check and covering of rough spots of springs with adhesive tape is carried out. Further damage prevention includes covering bare springs with a heavy cloth and placing a pad on top of the mattress. Long live your sheets!

CLUB NEWS
Alexandra and Districts Holstein and Beef 4-H Club met at the home of the leader Mrs. Charles Jones on Tuesday, May 28, with eleven members present. Judging classes will be held on the second Tuesday of the month and the regular meeting will be held on the fourth Tuesday with the exception of June, due to Entrance Examinations when the meeting will be held on Friday, June 28. Next judging class will be held at the home of Cyril Jones on June 11.

Three memberships were paid making a total of fourteen paid-up members. Pamphlets "The 4-H Club Story" were distributed to the members. A letter concerning study material for Juniors and Seniors was read and discussed.

Mrs. Jones then held a study period on the lesson amounted to 75 cents. Roll-call for June meeting to be responded to with an article for grab-bag which will provide some entertainment later in the evening. Phyllis Jones, Secretary.

4-H Club Story
The 4-H Club met at the Hamilton Hall on May 24th, with Miss Ann Ramsay presiding. It was decided that the next roll call be answered by giving the name of one's calf. It was also decided that the next meeting would feature a demonstration on how to make rope halter.

During the study period, the club leader, Mr. Lloyd Lockerby asked questions from the manual and set a June lesson for the members. Earle Lockerby, Secretary-Treasurer.

CLEAN MILK
A similar program was carried out at Augustine Cove with Mrs. Wendell MacFadyen as Chairman and Mr. Paul Cudmore, Field Supervisor, directing the demonstration and leading the discussion and planning group.

At Dunstaffnage, Mrs. Wilfred Thompson was chairman and Mr. Sinclair Cutcliffe, Red Cross First Aid instructor, directed the demonstration, presented a film and led in discussion plans for the swimming classes in that district. Thirteen lives were needlessly lost last year on P.E.I. through drowning and it is the aim of the Red Cross to make the year 1957 entirely free of such tragedies.

Engineers Do Something About Professional Education

By FORBES RHUDE
Canadian Press Business Editor

Engineers are people who by nature and profession are engaged in "doing things."

This is reflected in their national organization, the Engineering Institute of Canada—a was demonstrated at the institute's annual meeting last week in Banff.

Take, as an instance, the institute's approach to education. Dr. L. Austin Wright, the organization's general secretary, when asked about it in an interview, said:

"Everyone talks about education and everyone on the street 'knows' what should be done, and some fantastic ideas are produced."

"So we decided: Let's get the educators themselves together put them alone in a room, and keep everybody else out."

IDEAS EXCHANGED
Accordingly, last year and this, as a prelude to the institute's annual meetings, deans and professors from Canada's engineering institutions met, probably for the first time in history, on a cross-country basis.

This year, engineering deans and professors were present from 17 institutions. They exchanged ideas on both immediate classroom and laboratory problems and made some recommendations.

The institute plans to establish communication with these graduates and keep them informed of opportunities in Canada.

The two meetings, of educationists and students, were entirely separate affairs—they didn't meet together. Aside from their own gatherings, they remained for the full annual meeting and attended the various sessions.

In another educational approach, the institute is represented on every engineering campus by a member of the faculty, chosen by the engineering dean. He deals especially with problems of engineering students and is given about \$100 a year to spend in whatever way seems best.
