sort of let-down of personality that he makes up for by turning to alcohol. Thus our research workers in alcohol and alcoholism believe that alcoholism is a disease that affects the emotionally handicapped.

The alcoholic does not have a well integrated personality to help him face his difficulties. The alcoholic has to have periods of escape from his own characteristics, and makes his escape by the use of alcohol. Thus we see that with a certain percentage of alcohol in his blood, the alcoholic not only escapes from his difficulties but feels that he can drive his automobile rapidly and safely or perform other feats of skill and strength. This is the reason that everywhere today there is a movement to help the alcoholic understand that in driving a car he must have control of all his faculties, that he is not his best self when he is under the influence of alcohol.
