"The strongest memory is weaker than the weakest ink."

SATURDAY, OCT. 1, 1955

And Now, October

Today the "dreamy air" may be full of tender memories of the summertime; tomorrow, it may be, they will be all swept away by the cold North wind that does not stand on ceremony.

Community Planning

Community planning is something about which everybody talks, but in which only a comparatively few of our citizens take active part.

EDITORIAL NOTES

Apparently, land is at a premium in parts of Pennsylvania. Recently a Church School corporation bought a farm of 350 acres. Price: \$350,000.

What's the difference between a hurricane and a typhoon?

Simply a matter of names. Both are large scale whirlwinds. The former is a Caribbean and Atlantic destroyer that makes occasional forages inland.

REPORT SAILORS KILLED

COBourg, Ont. (CP) - Two persons were killed and two seriously injured Monday in a head-on collision between a car and a tractor-trailer transport near here.

National Pharmacy Week

The scrap of paper the physician gives us is oftentimes our ticket to good health, and we accept the medication from our pharmacist with utterly no thought as to where he got the medicine, or what he had to do, and what he had to know, to accurately conform to the wishes of the physician.

Today, more than 500 new drugs are introduced annually, by more than a hundred manufacturers. Hundreds of other items for our health are marketed in regional areas by many smaller firms.

Orphanage Appeal

Few institutions are more deserving of support than our orphanages, or more dependent upon generous public response to the modest appeals they make.

Business Bound

The Panama Canal

The Panama Canal, which Lord Bryce once called "the greatest liberty man ever took with Nature," is today entering a new phase in its 51 years as focal point of relations between the United States and the Republic of Panama.

FEE GOES UP

The Canal Zone itself will feel many of the treaty agreements. The annual fee the United States pays Panama for its use jumps from \$430,000 to \$1,930,000.

GOVERNMENT RESERVATION

A striking element that sets the lives of Canal Zone residents apart from distant compatriots is the climate. For most of the year the sun-and-rain-drenched isthmus is a tropical garden of exotic color and fresh verdure.

KNOW VITAMIN ABCS FOR NEWBORN BABIES

Whether your infant is breast-fed or bottle-fed, he probably does not get enough vitamins from his milk alone.

If your tot is under the watchful eye of a pediatrician or general practitioner, he probably is receiving extra vitamins. But if you are raising your baby without this expert advice, you should know the ABCs of the vitamin story.

Vitamin A—A daily allowance of 1,500 units for infants is recommended by the Food and Nutrition Board of the National Research Council.

A liter of cow's milk or mother's milk supplies this amount. Formula dilutions, however, reduce the vitamin A consumed by a bottle-fed baby.

Vitamin B2 or Riboflavin—Daily requirements vary from .4 to .9 mg. between two months and a year.

In the early months, your baby usually gets enough from his milk since cow's milk averages 1.57 mg. per liter and mother's milk about .43 mg. As he grows older, additional food usually supplies any riboflavin needed.

Vitamin B12—While there has been no authoritative recommendation as to the B12 requirements of youngsters, they probably get enough through the small amounts that various milks contain—unless they're ill.

Vitamin C—Recommended daily allowance is 30 mg. for infants, per liter. Pasteurization reduces this even further. Mother's milk contains about 43 mg. per liter, but only if the mother has maintained a nutritious diet.

I think it is a good idea to recommend vitamin C supplements for all infants.

Thiamine—Daily requirements are about 3 mg. for infants two, three and four months old, .4 mg. for the next two months.

Processing of cow's milk cuts the thiamine content to about .35 mg. per liter. Breast milk contains an average of about .16 mg. While food will increase your baby's thiamine intake when he begins to take solids, milk alone probably does not furnish an adequate amount. Thiamine supplements are in liquid form.

QUESTION AND ANSWER

Mrs. R.: One of my legs swells badly and becomes discolored after I have been seated for a short period of time. Could anemia produce this condition?

Answer: It is unlikely that anemia is responsible for your disturbance. It may be due to a local disturbance affecting the arteries or circulatory system.

An examination by your physician is necessary.

greatest European scholars of the Early Middle Ages, John Scotus Eriugena wrote a commentary on the works of Martianus Capella.

In that book he expounded as the compelling principle of the holding together of the Universe, the attraction of every particle of matter by every other one.

In the late Middle Ages the study of astronomy continued in the Irish schools and there still survive some astronomical texts used in them.

In the fourteenth century, in the great revival of Gaelic culture which paralleled the successful Gaelic resurgence against the Norman invaders, European books of all kinds were translated into Irish and astronomical texts were translated too.

It was not until the eighteenth century however, with the foundation of Dunisk Observatory with which are associated such famous names as Rowan Hamilton, Brunnow and Sir Edmund Whittaker, that scientific astronomy was developed in Ireland. But its origins clearly go far back into history.

NOTES BY THE WAY

Someone seems certain to make his fortune out of a new device for pressing suits. It was shown at an exhibition of laundry equipment in Paris last week.

Thousands of jobs could be provided during the slack winter months by spreading seasonal construction. The problem is one he tackled on a wide front—by contracting with private industry when it orders buildings put up by trade unions and by the Government which can give a lead.

Next thing we know some horse will be reported as announcing it is going to try for 1.45 mile which will bring a statement from Russia that a Soviet horse already has traveled the oval in that length of time and is now getting ready to make an attempt for 1.40 record. That's a breed it is going to be difficult to improve.—Kincardin News.

The Norwegian State Railway soon will start using concrete ties says a dispatch from Oslo. The wooden ties now used last 25 years longer, the manufacturers claim not unnaturally. What a bonanza this will be for manufacturers of concrete in Norway. It is a surprising supply in a country a well supplied with timber as Norway. The country apparently has huge resources for making concrete ties too. Manufacturers of concrete will watch the Norwegian development, eagerly, no doubt.—Sydney Post Record.

We would like to take issue with Leo Dolan, director of the Canadian government travel bureau, who says that a person cannot win a controversy with a newspaper writer. Mr. Dolan, who is a former newspaper man, adds: "The editor will always have the last word." As though to take some of the sting out of his remark, he continues: Knowing the integrity and honesty and responsible outlook of Canada's newspaper and magazine editors, I am very happy to leave the situation that way. Perhaps we should mention that in writing this piece, we are not particularly anxious to have the last word. It would have suited us much better if someone else had said it, but we do believe that something must be said. For if the impression were to get abroad that editors will join in controversy simply to have the last word.—Quebec Chronicle-Telegraph.
