**Sentenced To Prison For Manslaughter**

SYDNEY, (CP) — Two Cape Bretoners convicted of manslaughter were sentenced to prison by Mr. Justice J. H. MacQuarrie Tuesday as the winter session of the Supreme Court ended here. John Hennessey of Sydney was sentenced to three years in connection with the highway death

of Margaret MacMullen, 19, of nearby Reserve. Neil John MacKinnon of North Sydney was given two years in connection with the highway death of six-year-old John Hamilton, North Sydney.

**FAMED CRICKETER**

Herbert Sutcliffe, famed Yorkshire cricketer, scored more than 1,000 runs in each of 21 playing seasons.

**Discusses Potato Grading And Marketing Problems**

The institution of ceiling prices as well as floor prices and the changing of the size limit in the grading of potatoes were suggested yesterday by Mr. Frank L. MacNutt, Liberal, Third Prince as methods of creating more stability in the potato industry.

Mr. MacNutt, speaking in the Legislature in the Draft Address debate, stated that ceiling prices might be one effective way of creating stability in all agricultural industries especially in potatoes, hogs and cattle.

Mr. MacNutt also advocated an Unemployment Insurance Policy for farm labor and stated that this was an opportune time to make demands to the Federal Government that such a policy be instituted.

He stated that a change in the grading of potatoes would be necessary on account of the new methods of packaging. "When it comes to the 10 pound pack the customer finds that potatoes ranging from two to four inches are not very attractive," he stated.

"We are putting a package on the market that does not appeal to the consumer. If the size limit were reduced to 3 1-2 inches in diameter it might be the means of putting up a more attractive pack and also of taking the surplus off the market."

"We could feed our over-sized potatoes to the livestock. The amount of potatoes on the market each year would be governed by the size limit which could be set by some agricultural council," he stated.

**Ceiling Prices**

In reference to the institution of ceiling prices he cited hogs and cattle as examples of what had happened on account of too high prices. "When hogs went away

In an editorial in the Journal of the American Medical Association, we read that the growing tendency to recommend an annual physical examination has aroused a great deal of controversy in this country and abroad.

What about the actual factors in this controversy? In the Southern Medical Journal, Dr. J. P. Baker and his co-workers are taking encouraging steps. They have analyzed 2178 examinations and follow-ups of 1359 persons, mostly business executives who had no physical complaint. Many of them were examined at the expense of the firms by whom they were employed.

This indication that corporations are recognizing that the toll of death and disability in their executives is excessive, and something should be done in the way of prevention, is in itself encouraging.

We may be apt to think that the physical examination may be of the casual type—a simple run-over of the heart and lungs and examination of the urine. However, Dr. Baker and his associates outline what shall constitute a medical "overhaul" in a person with no complaints. The opponent of this annual physical examination, Dr. A. Abrahams, in the British Lancet, states that it would be absurd to do all the known test on every individual and that is why he opposes it.

However, Dr. Baker and his associates would like to see a standardized examination agreed on. Such a standardization would have the advantage that the reports from many observers could be compared and combined for statistical analysis.

Dr. Abrahams suggests that rather than an elaborate battery of laboratory and X-ray tests, a thorough and skillful questioning of patients covering each organ and system would save much time and money and accomplish as much. An important point mentioned by Dr. Abrahams is that the physical examiner must try not to let the patient be constantly concerned about himself, to be constantly concerned about whether one has the disease or not is really a disease in itself.

It will be a great step forward when our physicians get the periodic examination standardized so that all research physicians will be working along the same lines.

ate the extension of rural electrification," he said. "It will cost a great deal but the farmer will have something that will be of great benefit and that will not depreciate like other farm purchases."

Mr. MacNutt thought that extension of Grades XI and XII in the rural areas would be of great

benefit to the rural students who could not afford to attend College and he also noted that there had been a great improvement in the school buildings throughout the Province.

"I think a great deal of credit should go to the Women's Institute as well as the Government in this regard," he stated. "I feel

that the majority of the schools could not have accepted these grants if it were not for the Women's Institute."

He expressed agreement with the statements of Mr. Hubert Gaudet, P.C., First Prince, that the fishermen poaching in the

down all the farmers got out of the business with the result that the prices went up and now many of them can't take advantage of the prices.

"High prices cause speculation," he continued, "not only by the farmer but also by those outside the industry who are looking to make some quick money." He referred to the Texas cattlemen, many of whom were nearly ruined during the past year on account of the sudden drop in the price of beef due to over-production.

"I believe a great effort should be made to control weeds in the Province," he stated. "The mustard trouble is bad but it can be controlled by spraying although I understand the spray material is very hard on sprayers. I would suggest that the Provincial Department of Agriculture make a few sprayers available to control this menace."

He stated that many farmers were forced to lay off their hired help this winter on account of the low prices for agricultural products last fall. "There were four or five men in our district who were laid off including two married men."

"I feel that those men should be entitled to Unemployment Insurance just as the men who work on the ferry draw insurance. I think this would be an opportune time to make demands to the Federal Government that this Insurance be made available," he stated. "I am sure that we all appreci-

*Is there a difference in Tissues?*

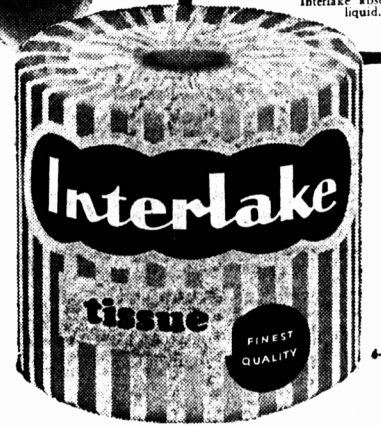

*Yes Ma'am...*

**INTERLAKE IS SOFTER**  
Try the lip-test for yourself... rub a piece of Interlake tissue across your lips—just compare its softness on your delicate skin.

**INTERLAKE IS STRONGER**  
Place a sheet of Interlake across the V between your first and second fingers—see how much pressure it takes to tear through Interlake tissue with your thumb.

**—AND MORE ABSORBENT**  
Place a few drops of ink on a teaspoon or plate, then drop on a small piece of Interlake—note the fast action as Interlake absorbs the liquid.

THE GENTLE TISSUE

Only Interlake gives you luxury tissue at a moderate price. That's because Interlake is blended from specially processed Canadian Spruce pulp... long-fibred pulp for gentle strength... short-fibred pulp for flexible softness and greater absorbency... with no woody texture or harsh surfaces. Yes, Interlake is the gentle tissue you and your whole family will prefer. Next time you're shopping for tissue, buy Interlake and feel the difference.

**100% REAL COFFEE**

*at a saving of up to 40¢ a pound*

**NESCAFÉ**

Up to 40¢ a pound over ground coffee—that's what you save with New Nescafé. The most convenient, flavourful way in which 100% pure coffee can be served.

*the Coffee more Canadians buy than all other brands of Instant Coffee Combined!*
