Now! Proof that BRUSHING TEETH RIGHT AFTER EATING WITH COLGATE DENTAL CREAM HELPS PREVENT TOOTH DECAY!

Research shows that decay is caused by mouth acids which are at their worst after meals. When you brush your teeth with Colgate's right after eating, you help remove mouth acids before they can harm enamel.

2 Years' research by LEADING UNIVERSITIES proves that test groups brushing teeth right after eating with Colgate Dental Cream showed amazing reduction in tooth decay!

Under the direction of eminent dental authorities, one group of college men and women always brushed their teeth with Colgate Dental Cream right after eating—while another group followed their usual dental care. The average of the group using Colgate's as directed, and using Colgate's exclusively, was a startling reduction in the number of new cavities—far less tooth decay. The other group developed new cavities at a much higher rate.

FURTHER PROOF FROM SCHOOL CHILDREN

Leading Canadian dentists examined and directed over 8,000 school children in corrective dental habits. In addition to diet changes where required, the children were asked to brush their teeth after each meal.

The results: 16% fewer children with tooth decay!... Cavities dropped from an average of 5 per child to just over 3!... 53% more children received dental care that prevented either loss of teeth or serious dental troubles later in life!... The number of children with no defects—increased by 200%!

HELPS YOUR CHILDREN AVOID TOOTH DECAY!

Insist that your children always brush their teeth right after eating with Colgate Dental Cream. They'll love Colgate's delicious double-minty flavor, so it's easy to get them to use Colgate's correctly.
