More Detail, Accuracy, In Weather Lore

WINNIPEG (CP)—Weather forecasts are becoming more detailed than in the past but they are also more accurate, says Andrew Thomson of Toronto, chief of the meteorological division of the transport department.

Forecasts are 85-per cent accurate, Mr. Thomson said, despite the fact they are more specific. Where the past provinces were at one time considered a single region, they are now broken up into 22 districts, and forecasts are no longer couched in vague terms.

By 1965 radar screens at weather offices across the country would show the progress of cloud formations within a range of 200 miles. It would then be possible to say where weather was going minute by minute.

Mr. Thomson said he does not believe in long-range weather predictions. Forecasts more than five days in advance were no better than climatic records for predicting the weather in any area.

He did venture to say, however, that western winters definitely have been getting milder since records were first kept in 1883.
